ADMINISTRATION REPORT

OF

IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1916-17.

I.—GENERAL.

A.—DETAILS OF DIRECT EXPENDITURE.

In the year 1916-17 the direct expenditure (excluding collection charges) on all the Irrigation Works throughout the Presidency amounted to Rs. 68½ lakhs compared with Rs. 86½ lakhs in the previous year, and Rs. 93 lakhs, the average of the last three years. The total is classified and divided between the Presidency proper and Sind as follows :—

	Deccan and Gujarāt.	Sind.	Total.
	Rs.	Rs.	Rs.
Works	24,01,870	6,24,804	30,26,674
Repairs	4,87,321	19,48,993	24,36,314
Establishment	8,05,999	8,53,099	16,59,098
Tools and Plant	—1,19,209	—1,52,109	—2,71,318
Refunds of Revenue	—9,115	—9,115
Gratuitous Relief
Suspense Account	8,313	796	9,109
Receipts on Capital Accounts	—5,319	—5,319
Total	35,69,860	34,75,583	68,45,443

2. The distribution of the above expenditure under Major heads of Accounts is given below :—

Heads.	Amount.	Remarks.
	Rs.	
<i>Capital Account—</i>		
Major Works—		
Protective Works	(a) 24,45,742	
Productive Works	2,37,489	
	26,83,231	Imperial.
Minor Works and Navigation—		
Works for which Capital and Revenue Accounts are kept	52,883	Half Imperial and half Provincial
<i>Revenue Account—</i>		
Major Works—		
Protective Works	2,84,455	
Productive Works	12,74,019	
	15,58,474	Do.
Minor Works and Navigation—		
Works for which Capital and Revenue Accounts are kept	5,76,969	
Works for which only Revenue Accounts are kept	10,73,058	
	16,50,027	Do.
<i>Works for which neither Capital nor Revenue Accounts are kept—</i>		
Agricultural Works	(b) 7,95,154	
Contribution Works	42,265	Do. Deposit con- tribution.
	8,37,419	
Construction of Protective Works	63,409	Imperial.
Famine Relief outlay on Irrigation Works	
Grand Total	68,45,443	

(a) Includes expenditure in England, Rs. 16,997.
(b) Includes expenditure in England, Rs. 222.

some extent with the seasons. The following statements give a comparison of this year's and the average of the last three years' figures :—

Class of works.	Revenue.			Expenditure.	Net Revenue.	
	Direct.	Indirect.	Total.			
	Rs.	Rs.	Rs.	Rs.	Rs.	
MINOR WORKS.						
Works for which only Revenue Accounts are kept.	Deccan and Gujarát.	11,220	5,80,082	5,91,302	3,51,850	2,39,452
	Sind	60,672	28,36,078	28,96,750	9,48,886	19,47,864
Total for 1916-17 ...	71,892	34,16,160	34,88,052	13,00,736	21,87,316	
Average total for triennium ending 1915-16 ...	79,602	30,71,301	31,50,903	14,59,157	16,91,746	
Works for which neither Capital nor Revenue Accounts are kept.	Deccan and Gujarát.	13,022	13,022	74,782	- 61,760

D.—REVIEW OF IRRIGATION.

6. A general review of irrigation brings out strikingly the different conditions obtaining in Sind and in the Presidency proper. Well irrigation is similar in all parts of the country but canal irrigation in Sind is of quite a different nature from the canal and tank irrigation in the Deccan and Gujarát. Description of irrigation.

7. In Sind, the rainfall is scanty and the cultivation entirely depends upon irrigation, the country is flat and the soil is mostly very fertile, but until it is brought under irrigation, the land presents everywhere the appearance of a desert.

8. In Sind, the canals are mainly dependent for their water supply on the inundation of the river Indus. They receive water, with few exceptions, from June to September only and their flow is very variable. With a consistently low river, the canals can get only very little water, while a fairly high and long-lasting inundation permits of the wide-spread cultivation of rich crops.

9. In the Deccan and Gujarát, the cultivation depends upon rainfall only and the tanks and canals are therefore useful for the purpose of growing more valuable crops or to counteract, if necessary, the evil effect of years of deficiency of rainfall.

Inundation and
rainfall in Sind.

10. The inundation of 1916 was a satisfactory one owing to abnormally heavy but timely rainfall which was of great assistance in mitigating the otherwise serious effects of the low river in June.

Rainfall in the
Deccan and Gujarát.

11. In Gujarát, the rainfall, though not much in defect of the normal, was not satisfactory, being local and scattered. In the Deccan, however, it was seasonable and consequently there was less demand for canal water for monsoon and rabi crops.

12. The area irrigated in Sind was over $3\frac{1}{2}$ million acres which is more than a quarter of the culturable area of the province and the gross revenue was 94 lakhs of rupees while the capital expenditure upto date on irrigation works has been 326 $\frac{1}{2}$ lakhs.

13. In the Deccan and Gujarát the total area irrigated was 266,000 acres only out of 28 million acres classed as culturable and the revenue from all sources was nearly 22 $\frac{1}{2}$ lakhs. The capital expenditure upto date has been 619 lakhs of rupees.

II.—SIND.

1.—NATURE OF INUNDATION AND RAINFALL.

Character of
Inundation.

14. The inundation of 1916 was, on the whole, a satisfactory one owing to abnormally heavy but timely rainfall in June when the river was unusually low.

15. The river commenced to rise early in June and reached its highest level on the 16th August when the reading at Bukkur was 13.6 feet, as against 12.7 feet in 1915, and 17.9 feet, the maximum reading recorded. On the 14th August it attained the "fair irrigating level" of 13 feet. This level and over was registered for 9 days as against none in 1915, 45 days in 1914 and an average of 20 days for the previous triennium.

16. The corresponding 'fair irrigating level' *vis.*, 17 feet at Kotri, was first registered on the 21st June and this level and over was maintained continuously upto the 14th September, *i. e.*, for 86 days as against 65 days in 1915, 100 days in 1914 and an average of 77 days for the previous triennium. The highest reading was 22.1 feet on the 24th August as compared with 19.6 feet in 1915, and 23.8 feet, the maximum reading recorded.

Rainfall.

17. The season's abnormally heavy rainfall was of great assistance in mitigating the otherwise serious effects of the low river during June, although it caused some breaches in canals in north Sind which were, however, closed with small damage to crops.

2.—INDUS RIGHT BANK DIVISION.

(i)—WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE KEPT.

Desert Canal.

18. The Desert canal was opened on 1st June as usual and the supply was very good throughout, except at the tails of some branch canals where there was slight deficiency. Though the full supply gauge reading was obtained on 40 days the canal discharged its designed discharge of 2,750 cusecs on 83 days.

19. The Adiwah worked better than last year. A scheme for remodelling it is under consideration.

Unharwah.

20. The Unharwah was opened on 1st June 1916 and the supply was, on the whole, satisfactory, except on a branch, the Khariwah, but at its tail and that of the Nasir there was slight deficiency chiefly due to a large number of *kacha* sluices. Though the full supply gauge was obtained on 34 days, the designed discharge was recorded on 74 days.

21. The rabi supply was reduced by active erosion just above the head which caused heavy silting in the supply channel in September. Soon after, the main Dhand moved away from the mouth, but a new cut was made extending the mouth to the main Dhand.

Begári Canal.

22. The Begári canal was opened on 1st June as usual and the supply was very satisfactory throughout. The maximum supply which the canal can take was obtainable on 58 days and the designed discharge of 5,668 cusecs was obtained on 67 days.

23. There were complaints of deficiency from the zamindars whose karias take off the main canal below and near the regulators. The only method of removing these complaints is to construct branch canals, proposals for which are under consideration.

24. All the branch canals worked well. There was a little deficiency at the tail of the Nurwah, but this was rectified by rotation of the upper sluices.

25. One breach occurred in the main canal, at mile 33/3 right bank which was quickly closed. The Choi branch breached badly on two occasions at its crossing at the Lundi Dhoro. Retired bunds have now been constructed at this point to minimize the danger of recurrence of such breaches.

Mahiwah.

26. The Mahiwah was opened on 10th June 1916. The canal takes off from the Gudu dhand and has worked very satisfactorily. Usual rotations were enforced to supply water to Deharwah tail and for the irrigation of high lands for rabi. The following works remaining to be done in connection with the Mahiwah Project, (i) widening the Mahiwah Main, (ii) sluice at head of Khambra distributary, (iii) road culvert on Khambra distributary at mile 1/3, have been abandoned and a survey is being made for a new rabi branch starting from mile 1/1 of the Mahiwah in lieu of the projected Mirkosh branch.

27. The Rahuja head of the Sukkur Canal was opened on the 25th May 1916 with 4.8 Sukkur Canal feet at Bukkur, and the gauge at Shikarpur road bridge reading 6.2 feet. This year, this head worked very satisfactorily as it was not found necessary to supplement the canal by opening the old head till 30th September whereas in 1915 the old head had to be opened on 5th July. This good result was due to the clearance that was done during the previous working season. Dhoro "B" was again thoroughly cleared to a bed width of 50 feet to supply the Rahuja head and groyning was done in a particularly wide portion.

All the branches worked satisfactorily.

28. The Ghar canal was opened on 26th May 1916 when the gauge at its head Ghar Canal recorded 4 feet corresponding to 4.5 feet at Bukkur. On the 14th of June the Bukkur gauge read 10.1 feet (the reading which affords a fairly good supply in the canal) and the river rose, with a few fluctuations, till 1st July when 12.2 feet were recorded at Bukkur. During this rise, rice transplantation was pushed on vigorously with the result that all crops were established. Owing to the groynes constructed and clearance done in the Ghar dhand opposite the canal mouth, the supply in the canal proved quite adequate. This year a permanent earthen dam has been constructed across the dhand just below the head of the canal.

29. The Fordwah, a feeder of the Ghar canal and its branches, which takes off from the Ford dhand, worked very satisfactorily. It was opened on 1st June 1916, recording a gauge reading of 5.4 feet on the up-stream and 3.5 feet on the down-stream at the head regulator, when the gauge at Bukkur was reading 4.6 feet. Full supply depth of 10 feet and over was recorded at the 2nd Mile regulator this year for 19 days against 3 days last year. There is generally a scour in the bed as well as on the sides just below its head regulator. To prevent this, every year, groynes are constructed but they have not been very successful. Further groyne work of a more permanent nature has been done this year.

30. The Sattah canal derives its supply from a "Kohri" which is fed from the river Sattah Canal. Indus by an artificial cut, where heavy clearance is necessary every year involving heavy expenditure which must continue until a regular canalized channel is obtained. The canal and its branch, the Rajwah, have worked very satisfactorily although affected by the general deficiency of the early part of the inundation.

(ii) WORKS FOR WHICH ONLY REVENUE ACCOUNTS ARE KEPT.

31. The principal canals under this head are the Sind, Western Nara, Pinyari, Kalri and Baghar canals.

32. The Sind canal was opened on 1st June 1916. The system received an excellent, steady supply upto the end of August, when the river fell suddenly. Most of the lift lands got flow water and rice cultivation was tried to a great extent owing to the ample supply in the system. The very favourable conditions at the head of Colonel Fife's Channel suddenly changed towards the end of August when the river receded from the dhand feeding the channel. A proposal to take advantage of the supply, in future, from the other head, New Feeder, is under consideration. The irrigation works under contemplation in regard to this canal are (i) removing curves in the canal, (ii) remodelling Mangirwah, (iii) reducing karias in Mirwah.

33. The Western Nara canal was opened on 20th May when Bukkur gauge read 4.7 feet Western Nara and flowed with a depth of 3.0 feet at its head. The head regulator was kept fully opened till 10th August when it read 13.0 feet, i.e., 2' more than the full supply level, when it was regulated on account of breaches in the canal. From 1st September the regulator was again kept fully opened.

34. The gauge at the head regulator corresponded well with that of Bukkur up to the middle of September but thereafter showed a difference of nearly 2.5 feet which was mostly due to erosion in the dhand feeding Gharo 'B'.

35. The canal worked very satisfactorily this year and the kharif crops grown were better than last year. The lands were also well soaked for rabi excepting some high portions.

36. In Mehar Sub-division there was deficiency of water from the beginning of July when the river was low and water was taken in the upper reaches for transplantation. But the rotations resorted to in the upper reaches did much good and saved the seedlings from withering. The rainfall in the beginning of August helped to bring the crops to maturity. Much of the kharif crop was flooded but the losses were amply compensated by an increase in rabi cultivation. In the Pritchard and Dadu Sub-divisions the kharif crop on the right bank of the Nara was mostly submerged by hill floods. The canal ceased flowing at the head on 30th October.

37. The New Feeder, till last year, used to take off from the Khambrani dhand, but this year the river has changed its course and the Feeder now takes off direct from the river. The canal was opened on 9th June, with a depth of 6.5 feet on the up and down stream gauges and the regulator remained fully opened till 9th August when the full supply of 12.4 feet was attained. From this date till 2nd September the supply was regulated in accordance with requirements.

38. The river has eroded about a mile at the head of this canal and is now about 2 miles 5 furlongs from the head regulator. There was no complaint of deficiency on this canal and the crops have been better than last year.

39. The Pritchard canal is the second feeder to the Western Nara. It worked excellently and gave a satisfactory supply.

40. It was opened on 25th May and had a moderate supply in the beginning but there was excessive water in the latter half of August and the regulator had to be partly closed. The cultivation has been normal and flourished well.

41. The canal brought down much silt as usual as it takes off directly from the river though it has a non-silting section.

42. Rotations on the stop gate-regulator were carried out as usual. The two escapes, one at mile 13/1 and the other at mile 21/1 and also the Larwah, a large zamindari karia in mile 13/7, were used this year at the time hill floods entered the Western Nara.

Pinyari.

43. The Pinyari was opened on 7th May 1916. It is 67 miles in length and is the chief source of supply of three sub-divisions, *viz.*, the Pinyari, Sujawal and Shahbunder.

44. The supply in the lower reaches of this canal was deficient until the early part of July and even when the normal supply became available the general demand all over the area under command caused considerable difficulties in distribution which were met by rotations. The supply was in excess of requirements after the heavy rainfall in August and was cut off at the head regulator. The work of reduction of vents of karia sluices drawing off excessive supply has now been almost completed.

45. The closure of unauthorized and superfluous karias is having the anticipated result of equalizing the distribution of supply in the branch canals.

46. The cultivated area and the outturn of crops have been exceptionally good.

Kalri.

47. The Kalri canal takes off from the river Indus near Luka and runs south-west through the interior of Tatta taluka and tails into Mirpur Sakro taluka. It was opened on the 11th June and until the 26th July 1916, the full supply in the canal was not available which resulted in loss of much of the early sowings. The well distributed rainfall of August, however, proved very beneficial and the continued good supply in the main and branch canals throughout August and September has yielded excellent crops.

48. Proposals for improving the water-supply in the lower reaches of the Kalri are under consideration.

Baghar.

49. The Baghar canal is one of the deltaic mouths of the river Indus and takes off from the right bank of the river near the town of Tatta. It runs through the Baghar Sub-division and tails into the sea through the Shisha Creek.

50. The supply in the Baghar branches during the early half of the inundation was very inadequate but after the rise of the river and the heavy rainfall of August it became excessive. The canal being unregulated it was inevitable that breaches of its banks should result but these were most promptly dealt with and little damage from flooding resulted.

51. The area under cultivation and outturn of crops are in consequence well up to the average.

Unfinished works.

52. The following are the principal original works under this head which were either commenced during the previous year or during the year under report but were yet in progress :—

	Expenditure during 1916-17. Rs.
Additions and alterations to the regulator at Chiman at mile 5/5 of the Sind canal	1,000
Additions and alterations to the Bichanji Regulator on Chiti canal	5,498
Constructing a head regulator over Charjo Wahur canal...	83,419
Excavating a cut for the Phitta canal from mile 4/7 to 9/0	4,112

53. In the Shikarpur Canals District, owing to the extensive floods, vast areas of land were brought under rabi cultivation.

54. In places exposed to floods, the kharif crop was submerged but the losses were amply made up by an increase in rabi cultivation. The regulation of sizes of karia heads and of rotations at regulators were followed as in previous years and proved satisfactory.

3.—INDUS LEFT BANK DIVISION.

(i) WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE KEPT.

55. While all the canals in the Right Bank Division take off directly from the Indus river, those in the Left Bank Division fall under two groups, *viz.*, (a) the Eastern Nara System and (b) canals taking off direct from the Indus.

Under (a) are the Nara river, the Jamrao, Mithrao, Khipro, Thar and Hiral canals, of which the Khipro canal flows during the inundation only, the others being perennial. The Thar, though classed as perennial, is closed on or about the 1st December each year to save the country round about from being water-logged.

Under (b) are the Dad, Nasrat, Fuleli, Hasanali and a large number of smaller canals, all being classed as inundation canals though the Fuleli receives a fair rabi supply.

(a) Canals taking off from the Eastern Nara.

56. The Nara supply channel is an artificial channel 12 miles in length taking off the river on its left bank above Rohri and forming the mouth of the Nara, an ancient course of the Indus. The supply channel worked satisfactorily during the year and no necessity for the services of a dredger was felt. The minimum discharge recorded during the year was 511 cusecs with a downstream reading of 6.1 feet at the head regulator. The Sarhad floods entered the Nara supply channel and these, though supplemented by abnormal rains, did not reach the Eastern Nara District. The head regulator was tightly closed, when a height of 26.1 feet on the 12th mile gauge was reached, for a full month from 18th August to 18th September. It was completely opened on the 31st September. Nara Supply Channel.

57. Necessary repairs to the channel and its sides, consisting of stone pitching and groyning were carried out during the year. Fluctuations of silting and scouring occurred at the mouth and were carefully watched and recorded as usual. The earthwork of the Ghotki Flood Diversion Bund (29 miles) mentioned in the last year's report was nearly completed during the year under report and a sum of Rs. 1,83,031 was spent on it during the year.

58. The Nara, from the end of the Nara supply channel to the Jamrao, is about 96 miles and from the Jamrao to the Thar Weir about 100 miles in length. It commands over 500,000 acres of culturable land. The area cultivated during the year on the Nara in this district was about 40,840 acres as against 38,233 acres in 1915-16 and 38,324 acres, the average of the previous three years.

59. The Nara bed is in fairly good condition. During the year under report surplus water from the Nara was allowed to pass through Mooral and Bagdad Sangs from 21st August to 13th September to the Makhi dhand, which forms a reservoir for supplementing the rabi supply of the Mithrao. This greatly helped the Mithrao when deficiency was experienced in the latter part of the year.

60. No capital expenditure was incurred on the Jamrao canal during the year. The recoveries of the year from Colonists amounted to Rs. 10,885. The Jamrao Canal.

61. Current repairs to the head works were carried out, as usual, and the head works were maintained in good order throughout the year and were not subjected to any undue strain, as the maximum and average discharge passing down the Nara were both low. The scour hole near the Divide Wall upstream of the weir silted up, as usual, during the flood season when the shutters were down. An opportunity was taken to cover it with a stone mattress 50' x 50' x 1.5' deep to prevent its scouring again before the water level fell and the weir shutters were raised. This has acted very satisfactorily and no further trouble is apprehended.

62. The approach channel has maintained its satisfactory condition. Soundings were regularly taken and the behaviour of the silt trap carefully watched for any signs of undue silting. The groynes at the nose of the island and also on the opposite side on the right bank were maintained in good order. They have stopped erosion and have induced silting, so ending the trouble hitherto experienced at these points.

63. The canal was completely closed for clearance from the 15th March to 25th May 1917. The necessity for this clearance after 17 years of the working of the canal was apparent, as the kharif discharge had fallen considerably below the designed discharge though the gauge reading at the head had been increased. This most important and arduous work was successfully completed within the period fixed for the closure of the canal. It had to be undertaken departmentally and employed some 5,000 men. The silt removed amounted to 106 lakhs cubic feet, at an approximate cost of Rs. 1,00,610. The whole work including raising inspection paths, etc., amounted to Rs. 1,34,780.

64. The area cultivated during the year on this canal was about 248,420 acres as compared with 278,135 acres in the last year and 259,103 acres, the average of the previous three years. The decrease in cultivation was mainly in the rabi crops. The area under cotton was about 101,020 acres as compared with 66,608 acres in the last year and 105,495 acres, the average acreage of the previous three years. A marked feature of this year's cotton was that owing to its high price, zemindars tried to get as many pickings as possible from their crop. Cotton was watered till December and in some cases upto February.

65. An allotment of new land to the extent of 7,467 acres was made during the year on this canal.

66. The Mithrao is, as already mentioned, a perennial canal taking off from the Nara above the Makhi Weir. The water-supply in the canal was fairly good on the whole though deficiency was felt at the tail at the commencement of the season. All the branches also worked well. Mithrao Canal.

67. The 30th and 45th mile distributaries, as mentioned in the last year's report, came into operation in May 1916 and worked satisfactorily. They should do well after some minor adjustments. The construction of these distributaries has improved the condition of

the lower reaches of the Mithrao to some small extent but that portion cannot be adequately benefited until the Makhi distributaries ex-Nara, which have been sanctioned but postponed for lack of funds, are constructed.

68. The capital expenditure of the year amounted to Rs. 10,420 and was mainly incurred on completing the 30th and 45th mile distributaries mentioned above.

69. The area cultivated during the year under report was about 129,290 acres as compared with 129,365 acres in the last year and 130,010 acres, the average of the previous three years.

Hiral Canal.

70. The Hiral canal flowed throughout the year and its supply was sufficient. The canal was designed for the cultivation of dry crops only and rice was entirely prohibited. But owing to the declining prosperity of the tract in the past decade, this restriction was relaxed and, as mentioned in the last year's report, zemindars were permitted to grow rice for two years (1915-16 and 1916-17) in low-lying and water-logged lands and also in high lift irrigated 'kalar' lands in which no dry crops can be successfully grown. As this concession was found to be advantageous to the zemindars and its continuance and extension thought desirable, pending the restoration of the condition of the soil by the construction of drainage channels, etc., certain proposals were put forward at a conference by the Executive Engineer, the Superintending Engineer and the Collector and recommended to Government by the Commissioner in Sind with some modifications. These have since been sanctioned by Government under Government Resolution, Revenue Department, No. 7355, dated the 16th June 1917. A project for the improvement of the Hiral tract by the provision of drainage channels is under scrutiny.

71. The Hiral commands 49,000 acres of culturable land. The cultivation during the year was about 17,970 acres as compared with 17,245 acres in the last year and 17,901 acres, the average of the previous three years.

72. New grants to the extent of 197 acres were made to local zemindars and Junior Talpurs on this canal during the year. Besides this, 688 acres of fallow-forfeited area were restored to the zemindars. An area of 526 acres was, however, forfeited during the year under fallow rules on account of non-payment of fallow assessment and 327 acres of grants cancelled.

Thar Canal.

73. The Thar canal and its branches worked satisfactorily. As the river was low at the beginning of the season, it did not get its full supply level of 8·7 feet and rotation had therefore to be resorted to at the intermediate regulators for the proper distribution of water upto 5th August. The Sufi Distributary newly excavated *ex* the Right Bank Branch of the Thar canal gave a good supply to the high lands near the Thar Protective Embankments but it drew off more than its share. A head regulator was therefore constructed across it during the year in order to restrict the supply.

74. The cultivation on this canal during the year was about 58,780 acres against 63,463 acres in the last year and 60,212 acres, the average of the previous three years.

Khipro Canal.

75. This canal commenced flowing on 29th May and ceased to flow on 7th November. It worked well upto the last and no rotation of karias had to be resorted to this year as is usually the case.

(b) Canals taking off direct from the Indus.

Nasrat Canal.

76. The supply in the Nasrat canal was deficient but the heavy rainfall of July and August and the usual rotations at intermediate regulators helped the cultivation to a very great extent. The canal was opened on the 8th of June and stopped flowing on the 30th September. The late commencement of flow of the canal had a bad effect on the cultivation of cotton which requires early water. There was a considerable reduction in the outturn from cotton owing to much of the late sown crop not having matured before the advent of frost. The loss on cotton cultivation was, however, more than made good by the extensive rabi cultivation which was effected as a result of the heavy rainfall of the season. The cultivation during the year on this canal was about 112,720 acres against 81,662 acres in the last year and 89,925 acres, the average of the previous three years.

77. The new cut, feeding the Nasrat excavated in 1915-16, worked very satisfactorily upto the beginning of September but about the 4th of that month the main current of the river, which, till then, had been eroding its left bank below the off-take of the cut, moved to the other side, leaving a large dhand in front of the new cut. This produced a fall in the water level, so that partly from this cause and partly from the deposit of silt, the canal stopped flowing while the Bukkur gauge read 6 feet although the cut had been excavated to flow with 3 feet at Bukkur. The Lundi dhand has been cleared this year (1917) to feed the Nasrat while the new cut has been closed at both ends and will be opened if erosion starts again at the Lundi Head and causes it to silt.

78. The total expenditure on the construction of karias and kasis upto the end of the year on this canal amounted to Rs. 2,88,860 against which Rs. 3,04,679 have been recovered from the zemindars. The latter amount includes Rs. 8,653 recovered during the year under report. An allotment of 1,758 acres was made on this canal during the year.

Dad Canal.

79. The Dad canal was opened on the 3rd of June and continued to flow effectively upto the 30th of September. The supply, on the whole, was, however, deficient owing to

the abnormally late rise of the river, the rapid fall at the end of the season and silting of the channel feeding the Dad in September. The bad effects of the deficiency were, however, counterbalanced to a great extent, as in the case of the Nasrat, by the heavy rainfall in July and August and by the judicious rotations at the intermediate regulators.

80. There were two breaches between miles 50 and 56. Their occurrence was most unfortunate as it necessitated the closing of the upper regulators to the detriment of the central reach of the canal which, as a rule, gets a deficient supply. The tail of the Dad also breached, as usual, owing to the excess water which had to be let down below the 50th mile regulator to give a suitable level down below. A project is under preparation for the better control of water in the last 36 miles.

81. Owing to erosion at the Dad head in the beginning of the inundation about 2½' to 3' of silt was deposited in the bed. The river, however, changed its course in the end of August and formed a dhand in front of the Dad head but the velocity was not sufficient to scour out the whole of the silt collected. About 1½' was removed by the force of the current while the remainder was cleared by hand.

82. The cultivation during the year was about 97,710 acres against 89,535 acres in the last year and 104,238 acres, the average of the previous three years.

83. The total expenditure on the construction of the karias and kasis up to the end of the year under report amounted to Rs. 1,32,574 against which Rs. 1,36,314 have been recovered from the zemindars. The latter amount includes Rs. 5,254 recovered from Colonists during the current year.

84. New land to the extent of 346 acres was allotted during the year.

85. The Ren distributary is fed by the Dad canal. At the end of the season due to rotations on the Dad system, the supply was deficient. The heavy rainfall in August, however, helped the crops to maturity. The total expenditure on this project upto the end of the year under report was Rs. 2,19,444, the outlay of the year being Rs. 16,055.

86. New land to the extent of 3,942 acres was allotted during the year.

87. The Fuleli canal worked quite satisfactorily during the year. The river was Fuleli Canal. abnormally low till the middle of June but maintained a high level throughout the rest of the season. Full supply at the tail was not reached till July 15th but the heavy rainfall in July, August and September helped the crops throughout the district. The rabi supply was barely sufficient for requirements and as the river was considerably below the average, there was slight deficiency in January and February. There was no accumulation of silt at the Fuleli mouth which is in a very satisfactory condition. The groyne for the reclamation of the eroded banks below the head regulator were maintained and the eroded portion is silting up satisfactorily. The Alipur regulator in the 46th mile of the canal was regulated at intervals throughout the season to give a higher level to the lift lands above it. These rotations have greatly benefited the zemindars in growing rabi crops.

88. As the lower mouth of the dhand supplying the Old Fuleli had silted considerably during the last inundation, a cut through the silted portion was made in a length of 2,500 feet with a 40 feet bed width to give the canal an early supply. There is still mild erosion at the take-off of the cut from the river and it is quite possible that the Old Fuleli will take off direct from the river in the near future and thus get a greatly increased supply.

89. The area cultivated during the year was about 415,000 acres against 416,970 acres in the last year and 400,429 acres, the average of the previous three years.

90. The main Hasanali canal and its branches worked very satisfactorily and even Hasanali Canal. with the low river at the beginning of the season there was no serious deficiency. The lower part of the canal is of a very tortuous nature with mountainous banks. In the future it will be necessary to cut an entirely new channel and at the same time raise the Full Supply Level of the canal. The Rajwah branch of this canal has been greatly improved by the construction of sluices and the tail now gets a satisfactory supply.

91. The area under cultivation on this canal was about 18,000 acres against 17,945 acres cultivated in the last year and 18,019 acres, the average of the previous three years.

92. All the canals in this district worked satisfactorily. There was erosion of the mouth of the Great Marak (dhand portion) during the middle of the inundation. Water Canals in the Hyderabad Canals District. in this canal was almost uncontrollable from the middle of June to the middle of September due to there being practically no draw-off for irrigation on account of abnormal rainfall during these months. In many places the canal banks were overtopped. There were also several breaches which caused much damage to the kharif crops. The project for the construction of a head regulator over this canal has been sanctioned and the work will be taken in hand during the ensuing cold weather.

93. The cultivation this year in the whole of the Hyderabad Canals District will be about 282,500 acres against 257,388 acres in the last year and 279,864 acres, the average of the previous three years.

(ii) WORKS FOR WHICH ONLY REVENUE ACCOUNTS ARE KEPT.

94. The principal canals under this head are the Naulakhi, Mehrab and Dambro in the Nasrat Canals District and Ren, Ghara Mahmudo, Kari Shumali and Nasir in the Hyderabad Canals District. All the canals under this head in both the districts had a fairly good supply.

95. Throughout the season active erosion was going on at the Naulkhi Head but the supply was not appreciably reduced owing to the very high velocity in the *shallow* cut of 1915. Since the beginning of September, the river current has shifted to the right bank leaving a dhand in front of the canal head and lowering the water level. As there is every likelihood of the river returning to the left bank, a new cut has been excavated to feed the canal during this season (1917).

96. The Mehrabwah had a variable supply. At first it received a back water supply from the Nasraf new cut, but as this proved deficient it was given a direct supply from the Lundi dhand. This proved most satisfactory till the end of August when this dhand ceased flowing. Thereafter depressions near the canal, which were full of river and rain water, were drained to supply it. This year (1917) the Mehrabwah will be fed from the Lundi dhand which has been cleared for the purpose.

4.—PROTECTIVE EMBANKMENTS.

97. The maximum gauge reading at Bukkur during the year was 13'6" against 12'7" last year and the water level against the Kashmir bund was 1'9" higher this year than last.

98. Erosion took place all through the inundation season between miles 3/6 to 10/1. The river was close to the front bund and it is quite probable that this will be eroded during 1917-18. Proposals for strengthening bunds are under consideration.

99. As usual, hill torrents caused a breach at the north end of the bund but no serious damage was done.

100. No breaches occurred due to flood water but there were a few leaks in the 1896 loop, Tori Bund and Tori Cross Bund. These were opened and refilled by the establishment.

101. Tori, Haibat, and Gouspur Loops were wetted satisfactorily by the trench system.

102. In the Shikarpur Canals District owing to the good inundation the flood water touched the Sukkur Begari bund in 54 out of 57 miles, Kassimpur bund in 5 out of 10 miles and Naich bund in the whole length of 34 miles. All the bunds stood very well and there was no accident. A few leaks occurred in the Adurtakio loop of the Sukkur Begari bund, but they were promptly detected and closed. Important original work carried out and in progress in this district during the year under report was a loop to Sukkur Begari bund, miles 9 to 13 (Bichanji loop).

103. In the Ghar Canals District water first touched the Mitho Phulu bund at depressions in miles 30/4 and 33/2 on 27th June, and miles 20/1 and 21/1 of Jhalli bund on 29th idem, and water stood in these depressions till 30th September. The maximum gauge readings recorded in these portions were 6'4" and 6'3" respectively on 16th August when Bukkur gauge read 13'6" which is the maximum reading recorded during the year. Bunds in this district are in good condition.

104. The bunds in the Western Nara District have now been extended upto Sehwan in a length of 21 miles making up the total length of bunds to 121 miles. The expenditure incurred on the work during 1916-17 was Rs. 1,03,414. With the exception of some leaks, the whole length of the bunds upto mile 80/1 was safe. As regards the new extension from mile 80/1 to 101, the work has been completed and a regulator over the Phitta canal, where the new extension crosses it, has been constructed. There remains only the regulator over the Chario Wahur which is still in progress. With the exception of a few furlongs, the water stood against this bund in its entire length and the maximum depth of water was 10'3 feet at mile 94/1 and 2. Owing to continuous heavy rains and storms, the slopes of the bund have been greatly damaged by wave-wash. There were about 200 leaks and 11 breaches all of which have since been closed.

105. In the Karachi Canals District the river bunds run along both sides of the river Indus for a length of 52 miles on the right bank and 94 miles on the left bank. The whole bund line on both banks of the river stood well during the inundation although the heavy and continuous rainfall of August caused some damage to the bund surface and slopes. Some considerable length of the Baghar Uchito bund had insufficient free-board owing to change in the set of the river and the raising of this length to the standard section is being provided as far as is practicable from the repair grant.

106. Many old type bund sluices which have proved to be sources of danger have now been replaced by new ones of the standard design.

107. The sluice in mile 13/2 of Baghar Uchito bund suddenly collapsed on the 17th August causing a breach which widened rapidly to 100' and its closure became impossible. This breach resulted in loss to Government of not more than Rs. 3,000 from remission of assessment on crops destroyed by spill water.

108. The uneroded distance between the river and the front Belo bund was only 17'. Erosion had also been active on the right bank opposite 27th mile of Baghar Uchito bund, and in the river Hyderi against the 12th mile of Kokawari bund which was cut into and will not now be maintained below this point as decided by the Indus River Commission.

109. A retired loop behind mile 9/6 to 10/3 of the Kokawari bund was constructed in 1915-16 but before it had been possible fully to wet this new loop, erosion of the river cut the front bund on the 29th June 1916, and the sudden pressure of the river spill against the new loop caused several breaches which it was impossible to close. These breaches have all been repaired during the year under report.

110. There are six short bunds in the Nasrat Canals District, all of which had river water against them during the inundation. The bund between the Nasrat and the Naulakhi was eroded and about half a mile of it taken away, but no damage resulted as a temporary loop was constructed behind it to confine the spill water. The Tirchi bund also breached but was immediately repaired.

111. The Ren Bund in the Hyderabad Canals District stood very well during the year under report. There was water against it in almost the whole of its length, the maximum depth being 39 feet.

112. All the bunds in the Fuleli Canals District were subjected to high water levels during August when Kotri gauge reached a reading of 22 feet. This was within 1.8 feet of the maximum of 1914. Owing to the heavy rainfall, the Baran river came down in flood and the gauges along the Hajipur bund rose to within .5' of the 1914 record. There were no breaches or leaks and the chief trouble was due to wave-wash. The new bund from the Dhadko to the Mulchandwah, estimated to cost Rs. 19,801, was commenced during the year under report and a sum of Rs. 4,204 was spent on it upto March 1917. A new sluice at mile 14 of the Hajipur bund is also under construction. With the completion of this bund and sluice, the whole embankment system of this district should be thoroughly efficient as owing to the high river level of the past few years the existing bunds have been severely tested and found to be staunch.

5—INDUS RIVER COMMISSION.

113. The expenditure on works and surveys was charged to "43—Irrigation Minor Works and Navigation—Agricultural Works—Works for which neither Capital nor Revenue Accounts are kept." Indus River Commission Works and their classification.

114. The usual topographical surveys, aggregating 2,337 miles in length, of the Indus, dhands and bunds, etc., were made. Survey of the Indus.

115. The Indus from Rojhan in the Punjab down to the bifurcation, 526 miles, the Haideri 37 miles, and the Ochito 63 miles were surveyed and plotted.

116. The usual surveys for the "Central passage of the Indus" were carried out. As, however, no useful results are obtained from these particular surveys, Government have now ordered that they should be discontinued in future.

117. The Khairpur Boundary rails, 82 in number, were inspected. Rail No. 24 on the right bank and its pointer were shifted to Phulu bund and the altered distance from this rail to midstream fixing and the consequent change in the total distance of the whole range line were reported to the officers concerned. Khairpur Boundary Rails.

118. Gauge readings of the river were taken daily at 11 stations, twice a week at 4 stations and weekly at 9 stations. River Gauges.

119. Discharge observations were continued at Sukkur and Kotri, and observations were made for the velocity at various depths, on the silt in suspension and sand waves or the movements of the bed of the river. The results will be published in the Indus River Records. The discharge at Sukkur during the inundation and the minimum discharge of the year, compared with the results of previous years, are as follows:— Scientific Work and discharges of the Indus.

Month.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.
June	8,138,000	8,432,000	7,401,000	8,925,000	8,038,000
July	16,227,000	10,586,000	21,453,000	10,756,000	13,044,000
August	17,275,000	13,377,000	18,359,000	11,834,000	18,227,000
September	7,034,000	7,670,000	13,863,000	7,083,000	7,972,000
Total*	48,674,000	40,065,000	61,076,000	38,593,000	47,281,000
Average discharge	398,967	328,402	500,623	316,377	387,549
Maximum discharge	721,256	621,156	948,728	430,445	735,348
Minimum discharge June to September	105,230	108,513	176,894	134,888	73,287
Minimum discharge observed throughout the year	23,730	23,719	40,664	25,546	17,568

NOTE.—These totals and their constituent figures are the sums of the daily observations of the Indus in cusecs. To arrive at its total discharge during the period concerned, the figures given in the table must be multiplied by 86,400 (the number of seconds in a day).

120. The discharge observations of the Indus at Mithankot above and below its junction with the Chenab were continued this year. The minimum discharge was 16,449 (actual) and 20,000 (calculated) cusecs respectively at the two sites.

121. Silt observations were taken above Bukkur gorge for comparison with those below the gorge.

Extensions and Improvements and Special Repairs.

122. The estimated cost of the works under these heads sanctioned during 1916-17 by the Indus River Commission for execution by Executive Engineers and by the Commission is given below:—

District.	Extensions and Improvements.	Special Repairs.	Total.
	Rs.	Rs.	Rs.
<i>A.—Indus Right Bank Division.</i>			
Shikarpur Canals	1,88,515	1,88,515
Western Nara	983	983
Karachi Canals	15,830	688	16,518
Total ...	16,813	1,89,203	2,06,016
<i>B.—Indus Left Bank Division.</i>			
Fuleli Canals	24,899	960	25,859
<i>C.—Indus River Commission.</i>			
Works under the direct control of the Indus River Commission	49,863	49,863
Grand Total ...	91,575	1,90,163	2,81,738

Maintenance and Repairs.

123. The total expenditure under this head on the several works under the direct control of the Indus River Commission was Rs. 11,853 of which Rs. 2,382 were spent on the River Gauge establishment at Sukkur, Kotri, Jherruck, Khairabad (Punjab) and the Indus Delta.

Total expenditure.

124. The total expenditure accounted for by the Indus River Commission was:—

	Rs.
Works	14,446
Repairs	11,853
Establishment	91,941
Tools and Plant	11,645
Total	1,29,885

Snagging operations.

125. The snagging of the Indus and the Eastern Nara was not carried out this year, owing to the S. S. "Fateh Mubarak," which is used for this purpose, being out of repair during the season.

Erosion.

126. Heavy erosion occurred at mile 3/6 of the Kashmor bund and at miles 11/0, 29/0 and 30/4 of the Sukkur Begari bund, the maximum rate of the erosion being 392 feet, 530 feet, 400 feet and 320 feet per week respectively.

Dredger "Mudlark."

127. No clearance work was done this year as the dredger "Mudlark" was transferred to the Military Authorities for use in Mesopotamia.

Sukkur Barrage.

128. The new district (called the Sukkur Barrage Project District) which was sanctioned last year was created and placed in charge of an Executive Engineer for the preparation of revised plans and estimates for the barrage and the two large canals in connection with it, and the conduct of necessary outdoor work.

6.—MISCELLANEOUS.

Plantation.

129. In all the districts in the Right Bank Division, nurseries and gardens were kept in good order and endeavour is being made by Executive Engineers to extend the plantation of trees along canals and bunds.

130. The existing plantations in the Left Bank Division on canals and bunds were well cared for. New trees were planted in all the districts on various canals and bunds and they are all thriving.

Irrigation of cotton crops.

131. No Egyptian cotton was grown in this Division during the year.

132. The following table shows certain details regarding the watering of indigenous cotton crops :—

District.	Lift lands.		Flow lands.		Date of last watering varied from to
	Number of waterings.	Intervals between	Number of waterings.	Intervals between	
Nasrat Canals	5 to 8	15 to 20 days	5th to 13th September.
Hyderabad Canals ...	5 to 6	20th to 30th September.
Fuleli Canals ...	5 to 8	10 to 25 days	8th to 20th September.
Eastern Nara	2 to 3	3rd August to 10th October.
Jamrao Canal ...	4 to 10	3 to 10	14th October 1916 to 17th February 1917.

III.—DECCAN AND GUJARAT.

1.—NORTHERN DIVISION.

133. No relief was required anywhere.

General remark.

(i) FIRST CLASS IRRIGATION WORKS.

134. The rainfall gauged at Ahmedabad and Prantij during 1916-17 was 26.64 and 21.20 inches against an average of 28.77 and 29.93 inches respectively for the last 30 years including the year under report. The rainfall, though not much below normal, was not satisfactory, being local and scattered. The Khari catchment did not get the benefit of much of this.

The Hathmati canal and the Khari system.

135. The monsoon broke as usual in the middle of June and more than an inch fell on the 16th and 17th idem. Heavy rain fell on the 23rd July at Ahmedabad which measured 3.21 inches. There were falls of more than an inch twice in August and once in September. Throughout August there was drizzling rain and in September there were drizzles at intervals of a few days measuring a few cents. On the 22nd October there was a little rain which did some good to the standing crops.

136. There were floods in the Hathmati river on the 17th June and 22nd August 1916, when the water rose 1.00 foot and 8.80 feet respectively above the crest of the weir. The Hathmati canal was opened on 17th June and flowed till 13th December 1916 with an interruption of 6 days. It was closed once on the 22nd August to avert damage to the canal gates by floating trees which came down with the heavy flood. Some damage was, however, caused to the concrete bar over the top of the weir and one of the piers of the waste weir, which was promptly repaired. The maximum discharge was 322 cusecs on the 23rd August and the minimum 21 cusecs on the 13th December. The supply available was utilized for irrigating the lands on the canal itself, the surplus water being allowed to run into the Khari river through the Bokh Reservoir (in which it was collected when not required) and the Bhujwa channel, to the extent of 530 and 367 million cubic feet respectively.

137. The Chandola Tank, mainly fed through the Khari Cut Canal, was half filled twice upto R. L. 136.60, storing about 80 million cubic feet which saved the rice crop of 800 to 1,000 acres in the surrounding villages.

138. In order to use the supply available to the best advantage, canal water was issued to the fields nearest to the canal and its branches, and only two waterings were given to save the early transplanted crops, it being almost impossible to save the late transplanted crops since they required not less than three heavy waterings which could not be given. Thus the object of saving the crops over as large an area as possible by economical distribution of water was achieved.

139. The area irrigated and the gross assessed revenue as compared with the average for the triennium ending 1915-16, are as under :—

	1916-17.		Average of the previous three years.	
	Area irrigated.	Gross assessed revenue.	Area irrigated.	Gross assessed revenue.
	Acres.	Rs.	Acres.	Rs.
Hathmati Canal ...	785	3,540	4,217	11,402
Khari Cut Canal ...	5,559	35,850	9,562	63,866

Tanks in Kaira.

140. The area irrigated and the gross assessment on the Wangroli, Tranza-Nagrama, Savli and Saiat Tanks as compared with the average for the triennium ending 1915-16, are shown below :—

Name of Tank.	1916-17.		Average of the previous three years.	
	Area irrigated.	Gross assessed revenue.	Area irrigated.	Gross assessed revenue.
	Acres.	Rs.	Acres.	Rs.
Wangroli	859	3,133 1,000*	585	2,486
Tranza-Nagrama	Nil	488	58	514
Savli	970	3,675	642	2,432
Saiat	Nil	723	328	1,614

* Proceeds of the sale of water given to the Gomati Tank at Dakor, taluka Thasra.

141. There was no replenishment received in the Tranza-Nagrama and Saiat Tanks. The Wangroli and Savli Tanks only partially filled. The whole supply in the latter tank was utilized in irrigating kharif crops, while surplus water from the former after supplying the requirements of kharif and rabi crops, was run into the Shedi river for filling, by lift, the sacred Gomati Tank at Dakor, in Thasra Taluka, in which there was little or no water for the pilgrims. The construction of the Balada high level canal from the Wangroli Tank which was commenced in 1915-1916 was in progress.

Futelao Tank.

142. The Futelao Tank filled partially and the supply was utilized in irrigating 89 acres of rabi as against 39 acres last year. Irrigation under the tank may be expected to expand as the advantages thereof become known. A portion of the bed was also given out for cultivation.

(ii) SECOND CLASS IRRIGATION WORKS AND AGRICULTURAL WORKS.

Khari Sluices.

143. The rainfall during the year, being local, badly distributed and not sufficiently intense, the Khari flow did not reach Pinglaj and it was necessary to utilize the channels from the Khari Cut Canals to save the rice crop on the Khari Sluices. Though due to the scanty rainfall and absorption on the way, not more than 1/4th of the volume let down at the head reached the Khari at Bidaj, Navagam—the most important village—was enabled to transplant about 200 acres and Pinglaj about 100 acres and an area of 1,200 to 1,500 acres of rice was saved by the canal water, mainly from the Hathmati river, the Khari being almost dry. This was possible as connecting channels had lately been constructed. The small tanks did not fill at all during the year, as owing to the light rainfall there was little or no flow off the ground, what little water fell being held up in the fields.

144. The special feature of the year was the heavy flooding of the Sabarmati river which twice overflowed some of the Khari Sluice area and enabled rice to be transplanted in the villages of Naika, Chanindra and Lower Navagam. The Mahijda regulator constructed last year was also used to store the overflow which helped subsequently to save 300 acres of rice in the villages of Mahijda and Wasai.

Muvalia Tank.

145. The Muvalia tank overflowed thrice, once each in August, September and October. On account of the seasonable and well distributed rainfall at Dohad, however, the demand for water for irrigation was limited and 677 acres only were irrigated as against 743 acres cultivated last year.

Old Tanks.

146. Improvements to 98 and repairs to 61 small irrigation tanks in the Gujarat Irrigation District and repairs to 19 such tanks in the Surat and Broach District, were executed at a total cost of Rs. 82,776 and Rs. 42,264 respectively. In the Gujarat Irrigation District, repairs to 6 Talukdari tanks were in progress, the Government share of the expenditure being Rs. 879.

Drainage channels.

147. The drainage channels in the Surat and Broach and Gujarat Irrigation Districts were maintained and the reclamation works in the former repaired.

2.—CENTRAL DIVISION.

148. In the Central Division there are a few irrigation works of importance. The area irrigated on First Class Irrigation Works was 10,138 acres and the gross assessed revenue was Rs. 1,43,918.

149. The rainfall during the year 1916 being seasonable in the irrigated areas in the Central Division, there was less demand for canal water as compared with the average for the past three years.

(i) FIRST CLASS IRRIGATION WORKS.

150. *Ekruk Tank*.—The work of improving the water supply of the town of Sholapur, which is in progress, will, when completed, give a wholesome supply of water to the Sholapur

Municipality direct through the newly laid gravitation mains from the Ekruk Tank instead of, as heretofore, from the canal, in which the supply is liable to contamination.

151. *The Jamda Canals* in the East Khandesh District form an important irrigation system, the supply in which is not, however, assured for want of a storage tank. Though at present the river discharge is supplemented by a supply from the Chankapur tank, yet this source of supply cannot always be depended on as the tank has to provide water for a large area directly dependent on it. An important work carried out in connection with these canals was the raising the weir, the Jamda bandhara, by a foot, to R. L. 106.50, and making its crest perfectly level, which was not the case formerly. This work has been done in order to increase the discharge, and the velocity in the canals and lessen the deposit of silt.

152. A system of 8 months' Rabi Blocks was introduced on these canals from 15th October 1916 and water applications for an area of 68 acres and 26 gunthas were received. The Kharif and Rabi seasons being, however, very favourable, the irrigators could not appreciate and did not take full advantage of the system, which was explained to them by the local Revenue Officers.

(ii) SECOND CLASS IRRIGATION WORKS.

153. The total expenditure on Extensions and Improvements and Maintenance and Repairs to the bandharas situated in the East Khandesh and West Khandesh Districts was Rs. 5,451. The area irrigated and the gross revenue assessed were 9,485 acres and 77,380 rupees respectively.

3.—DECCAN IRRIGATION DIVISION.

(i) FIRST CLASS IRRIGATION WORKS.

(a) Works in existence.

Protective Works.

154. The Nira Left bank canal situated in the Poona District is the largest irrigation work in operation in the Deccan. Nira Left bank canal and Shephal Tank.

155. The canal irrigated a total area of 34,228 acres. This is much below the average figure, the fall being due to seasonable rainfall and consequent low demand for canal water for Monsoon and Rabi crops. The gross revenue from all sources was Rs. 4,46,159.

156. The total area irrigated under the Mhaswad Tank was 4,846 acres and the gross revenue from all sources was Rs. 33,685. These are lower than the average figures, the fall being due to seasonable rainfall. Mhaswad Tank.

Productive Works.

157. The Mutha Canals system irrigated a total area of 10,402 acres, the gross revenue from all sources was Rs. 4,31,946 which includes Rs. 1,69,703 realized from the Poona Water Supply. There was a small decrease in the irrigated area due to seasonable rainfall, but the gross revenue was higher chiefly owing to an increase in the area of sugarcane. Mutha Canals and Matoba Tank.

158. The installation of the Paterson filter plant at the Poona Cantonment Water Works was practically completed. The plant was brought into operation in July 1916 and is working very well. The expenditure incurred on this work during the year under report amounted to Rs. 38,908, bringing the total expenditure to Rs. 1,72,723.

(b) Works under construction.

159. The Godavari Canals Project comprises the following works :—

Godavari Canals.

- (1) Lake Beale Storage.
- (2) Pick-up-weir at Nandur Madhmeshwar.
- (3) The Godavari Right and Left Bank Canals.

This is the first of the new large protective irrigation schemes in the Deccan and has now been practically completed.

160. *Godavari Right Bank Canal*:—The whole length of 70½ miles of this canal and all its distributaries have been completed. The last 8½ miles have been tested and are now ready for irrigation purposes. During the year this canal irrigated a total area of 15,453 acres and the gross revenue from all sources was Rs. 1,50,117.

161. Every effort is being made to make irrigation popular by acquainting the cultivators with the canal rules and the proper system of careful cultivation. The local Godavari Canals Irrigators' Association, mentioned in the last report, held during the year several meetings which were well attended.

162. The progress of sugarcane cultivation was more rapid than anticipated, and is due to the impetus given to the sugarcane industry by experienced Saswad malis from the Poona District.

163. *Godavari Left Bank Canal*.—The construction of the whole length of this canal and its distributaries has been completed. This canal irrigated during the year 3,549 acres and the gross revenue from all sources was Rs. 40,792.

164. The total expenditure incurred on this project during the year was Rs. 1,30,093 as under:—

	Rs.
Lake Beale Storage	7,544
Godavari Right Bank Canal	1,16,860
Godavari Left Bank Canal	5,689
Total ..	1,30,093

Pravara Canals.

165. The Pravara Canals system comprises:—

- (1) Lake Arthur Hill Storage.
- (2) Pick-up-weir at Ojhar.
- (3) The Right and Left Bank Pravara Canals.

During the year the dam was raised throughout to one level, *vis.*, R. L. 2289.

166. The caging work for the lowest sluice at R. L. 2227.63 was completed and the laying of the pair of pipes for the second sluice at R. L. 2277.63 was commenced during the year. The raising of the weir at Ojhar and the construction of the head regulator with the scouring sluices for the Pravara Left Bank Canal were completed during the year.

167. *Pravara Left Bank Canal.*—The work of widening and extending the old canal, started in 1910, was practically completed with the exception of a few masonry works. The construction of distributaries was in progress. The canal was closed during the year.

168. *Pravara Right Bank Canal.*—All the works on this canal, including distributaries, were practically completed. The progress on the construction of the tail branch and Rahuri distributary was rather slow owing to scarcity of labour.

169. Water is at present given for perennial irrigation in fields having wells and the total area irrigated under the canal during the year was 2,278 acres. The gross revenue from all sources was Rs. 10,914. These figures are lower than the average owing to seasonable rainfall.

170. The total expenditure incurred during the year on this scheme was Rs. 8,18,563 as detailed below:—

	Rs.
Lake Arthur Hill Storage	5,13,347
Pravara Right Bank Canal	40,707
Pravara Left Bank Canal	2,64,509
Total ..	8,18,563

Nira Right bank canal.

171. This project comprises the following works:—

- (1) Building a new dam at Bhatghar.
- (2) Increasing the capacity of the existing Nira Left Bank Canal.
- (3) Constructing a canal on the right bank from Vir up to Piliv for a length of about 88 miles.

172. *Bhatghar Dam.*—The excavation for foundation of the new dam was completed with the exception of a short length of 400 feet. The total excavation done during the year was 1.76 million cubic feet. The foundation has been practically covered throughout and masonry raised several feet. The total quantity of masonry laid during the year was 1.27 million cubic feet.

173. The progress during the year was not satisfactory owing to (a) labour difficulties caused by a good agricultural season, (b) the outbreak of plague in the neighbourhood of Bhatghar and at the Lime Depôts at various places, and (c) the excessive amount of water met with in the foundations owing to heavy percolation from the upstream side of the cutting and the late rains, which continued till the end of November.

174. The erection of the turbine pipe and of the Power House Machinery was completed and the Electric plant worked very satisfactorily.

175. *Right Bank Canal.*—The canal was originally designed to discharge 1,500 cusecs with 8 feet of water at its head and to be 109 miles in length. But in the revised project the portion below mile 88 has been omitted, as the supply after the construction of the new Bhatghar dam is likely to be fully utilized above that point.

176. Considering the labour difficulties due to a severe plague epidemic, the progress on earthwork and masonry works was fairly steady and good.

177. A detailed contour survey of the area under command of the canal for distributaries was in progress.

178. The total outlay during the year under report was Rs. 14,04,705 as detailed below :—

	Rs.
Lake Whiting District	6,90,033
Lonand District	3,68,532
Malsiras District	3,46,140
Total	14,04,705

179. The river supply was sufficient for the requirements of the Girna Canal upto 18th January 1917, after which water was let out of the Chankapur tank. The tank water not required for the canal was let down to supplement the supply to the Jamda Canals in the East Khandesh District. Girna River Works.

180. *Girna Left Bank Canal.*—This canal irrigated during the year a total area of 1,837 acres and the gross revenue from all sources was Rs. 8,393. The cultivators under this canal have begun to realise the advantages of sugarcane cultivation and it is expected that the area of sugarcane will go up quickly. The extension of the canal was in progress, the expenditure incurred on it during the year being Rs. 13,874.

181. Under the orders of the Government of India water was supplied to the wheat crop, free of charge, during the rabi season of 1916-17 in the Deccan Irrigation Division. The area of wheat actually cultivated and the consequent loss of revenue due to Government amounted respectively to 11,052 acres and Rs. 53,346 as detailed below :—

Name of work.	Area of wheat actually cultivated.	Loss of Revenue.
	Acres.	Rs.
Nira Canal and Shetphal Tank	1,431	7,305
Godavari Right and Left Bank Canals	6,352	31,760
Pravara Right Bank Canal	244	732
Girna Left Bank Canal	880	4,385
Mhaswad Tank	624	2,494
Mutha Canals and Matoba Tank	540	2,665
Kadwa River Works	562	2,460
Lakh Canal	125	250
Paraul Tank	127	637
Kasurdi Tank	23	100
Shirsuphal Tank	100	334
Bhadalwadi Tank	44	224
Total	11,052	53,346

(ii) SECOND CLASS IRRIGATION WORKS.

182. The outlay on repairs, extensions and improvements to the bandharas and small village channels during the year was Rs. 28,328 as against Rs. 13,935 for the previous year.

4.—SOUTHERN DIVISION.

183. This year there was a decrease in the area of irrigation in the Southern Division owing to timely and sufficient rainfall. The total area irrigated and the assessed revenue showed a decrease of 23 per cent. and 6 per cent. respectively when compared with the average of the previous three years.

The Major and Minor Works of the first class irrigated about 24,000 acres of land while the numerous second class works in this division irrigated over 80,000 acres.

(i) FIRST CLASS IRRIGATION WORKS.

184. The only Major Irrigation work in this Division is a small weir and canal system on the Krishna river near Karad, south of Sátara. Certain improvements to the weir, undertaken with a view to enable an extra 4 feet depth of water to be stored, were in progress. The total expenditure on these improvements to end of the year under report was Rs. 59,086 against the estimated cost of Rs. 85,226. Krishna Canal.

185. The most important of the First Class Minor Works in the Division is the Gokak Canal. This irrigation system consists of a masonry weir across the Ghataprabha river in the Belgaum District and a short length of canal taking off from the reservoir formed by the weir. Gokak Canal.

186. With a view to increase the water stored by the weir, its crest (2,985 feet in length) was raised by constructing a temporary wall 2 feet high, as usual, at a cost of Rs. 1,546. The additional storage thus obtained proved very useful.

187. At the request of the Manager of the Spinning Mills at Gokak, the daily supply of water was reduced to 130 cusecs instead of the usual 146 cusecs, during the 4½ months period ending 24th May 1916.

188. On the evening of the 13th May 1916, the water in the reservoir reached its lowest level standing at 17 feet above the sill of the sluices. Thereafter the reservoir

filled till it overflowed on the 28th May 1916 and reached a maximum flood height on the 4th August 1916, when the water reached a level of 3.34 feet above the crest of the weir.

189. During the year under report, Rs. 31 only were paid on account of compensation for the lands taken up in 1906 for the Gokak Canal extension.

Revari and Chikhli Canals. 190. The only other two works taking off direct from rivers without storage are both in the Sâtára District, the Revari and Chikhli canals, irrigating about 900 and 200 acres, respectively. The former yielded, in the year under report, a gross revenue of Rs. 5,600 and the latter Rs. 2,100.

Dharma Canal. 191. Certain improvements to the Dharma Canal which were commenced in 1910, were in progress during the year. This consisted mainly of (1) providing a new Head Regulator to admit sufficient supply to the canal and to control floods, (2) providing escapes and aqueducts at certain places in the first 10 miles of the canal, (3) putting the tail portion of the canal into good order, and (4) constructing suitable cross drainage works. The total expenditure on these improvements to the end of the year under report was Rs. 85,537 against the estimated cost of Rs. 95,582 (direct charges).

Yerla River Irrigation Works. 192. Of canals furnished with storage works, the three most important are in the Sâtára District. The Yerla river irrigation works irrigated over 2,400 acres of land yielding a gross revenue of over Rs. 12,500.

Maini tank. 193. The Maini tank is the second system. It irrigated 1,500 acres with a gross revenue of over Rs. 6,400.

Upper Mán River Works. 194. The third system referred to is the Upper Mán river works with the Pingli tank as storage. This irrigated about 700 acres yielding a gross revenue of Rs. 3,300.

Other Works. 195. The remaining works are all small tanks mostly in the Dhárwár Irrigation District. They irrigated from 50 to 600 acres each.

(ii) SECOND CLASS IRRIGATION WORKS.

196. Most of the Second Class Irrigation Works are in the Dhárwár District and on them depends the success of the important rice cultivation in the hills. During the year, repairs to 71 tanks were carried out and the expenditure on them amounted to Rs. 32,000, the average of the previous three years being Rs. 54,200.

5.—SCIENTIFIC WORKS.

ENGINEERING QUESTIONS THAT HAVE ARISEN.

197. Experimental iron boxes to ascertain the loss by evaporation of water in tanks have been installed in the Ekrak, Ashti and Pathri Tanks in the Sholápur District, the Mhaswa and Hartala in the East Khandesh and the Bhatodi Tank in the Ahmednagar District. The results of observations are being recorded; these will furnish useful data in the preparation of projects for tanks to be constructed under similar conditions.

198. The raising of the crest to one uniform level of the weir at Jamda and the institution of a new river gauge at Raipur 2 miles below it will enable some interesting comparisons to be made between the river discharges as gauged at the two places.

199. An experimental device for locking pipe outlets is under trial on the Bhatodi Tank in the Ahmednagar District, the use of which could, if found satisfactory, be extended.

200. During the year under review the formation of a special Irrigation District was sanctioned by the Government of India for carrying out certain investigations and surveys, etc., as detailed below, in connection with the areas under command of the important Irrigation systems in the Deccan, viz., the Nira Canals, the Pravara Canals, the Godavari Canals and the Mutha Canals :—

- (a) Contouring the commanded area.
- (b) Making a careful survey and classification of the surface soil and subsoil.
- (c) Selecting and marking out definite areas suitable for 'blocks' for perennial and other crops.
- (d) Designing the drainage required.
- (e) Indicating suitable lines of communication and centres for the establishment of grinding, crushing, refining and other machinery for trade purposes.
- (f) Making a special study of the reclamation of waste lands and areas damaged by water logging and salt efflorescence and of the problem of the growth of useful timber in such tracts and along the main canals.

The work done during the year by the Special Engineer appointed for the purpose was only preliminary and experimental.

(a) RIVER GAUGING.

201. The gauging of 36 rivers in the Deccan and Gujarát was continued during the year under report directly under the control of the Deccan Irrigation Division.

202. A training class was opened in Poona where practical instructions were given to the old as well as the new gauge karkuns before they commenced the annual gauging operations. This, combined with the frequent surprise visits paid to them, the timely

inspection of and repairs to the gauges, etc., helped to make the results more reliable. These figures are published in an annual report.

203. The several rain gauges in the Belgaum and Sâtara Districts were maintained during the year by the respective Executive Engineers.

(b) EXPERIMENTS ON THE EFFICIENCY OF CANALS.

204. Another annual publication gives a record of observations for the flow and losses in canal, the quantity of water used for irrigation and the loss from tanks.

205. Occasional notes are written upon the saturation of earthen dams and the rate of deposit of silt in tank basins for which observations are being made continuously.

* This area is also commanded by the Nira Left Bank Canal.
 † Corrected as the F. S. L. is raised by 0.50 feet, i.e. to R. L. 102.50.
 ‡ Corrected as found by actual contours.
 (a) Figures given in Statement I-A.
 (b) The tank supplies the Girna Left Bank Canal and bandharas there below.
 (c) Above lowest foundation.
 (d) Above lowest point in river bed.
 (e) The tank supplies the Palhed, Ghar Tambat, and Wadali Canals and their distributaries as noted in Statement I-A.
 (f) Includes 3.5 miles of Branch Canal.
 (g) Storage available after deducting 508 M. cft. which cannot be used on account of the Poona water-supply.
 (h) Includes 7133 commanded by Matoba Tank.
 (i) After deducting all deposits.
 (j) The catchment area of the drainage channel is 13 square miles in addition.
 (k) Gauged at the respective stations.
 (l) Assumed.
 (m) Gauged in the catchment area.
 (n) The contents at present after deducting all are 75.63 M. cft.
 (o) At provisional F. S. L. R. L. 103.30.
 (p) At original F. S. L. 105.00.

(a) Excluding Irrigation Share of Land Revenue.

(b) Correct balances as now reported by the Revenue Officers in Canal Returns Nos. VI and VII.

(c) Inclusive of assessments shown in Canal Return No. IX.

(d) Excess recovery to be refunded.

(e) Includes Rs. 591 on account of Kharif season 1915-16 shown in Return No. VI for the year 1916-17.

E. M. COOK,
Accountant General, Bombay.

STATEMENT IV-C.

Statement showing the Financial Results of Irrigation Works in Deccan and Gujarat for the year ended 1916-1917, based on the assessment of the year.

Principal Results and Operations for the year ended 31st March 1917.

Irrigation Works.	Capital outlay (direct and indirect) to end of year.	REVENUE ASSESSED DURING THE YEAR.										Working Expenses, direct and indirect.	Net annual Revenue of the year.	Percentage on Capital outlay to end of year.
		Direct assessed Revenue.								Indirect Revenue (Land Revenue due to operation of canal).	Grand Total.			
		Occupier's rate.	Owner's rate.	Plantation.	Water-power.	Navigation.	Miscellaneous.	Total.

Area on which consolidated assessment is levied

* This represents the area in the basin of Lake Beale let out for cultivation and measured as per G. R. No. A. L.—7200 of 9th August 1912, respect of different crops.

† It includes 16 acres of sugarcane to which water was given for the same area in different seasons and 298 acres for ploughing purposes in

‡ Includes waste of water.
