INDEX.

	Pages
General results regarding receipts from, expenditure on and areas irrigated by irrigation works in the Bombay Presidency	I & II
General review of irrigation works in Northern Division	III & IV
Do. do. in Central Division	IV to VII
Do. do. in Southern Division	VII to IX
Works done by the Superintending Engineer on Special Duty	IX to XI
General remarks in connection with the character of Inundation in Sind	XI
General review of irrigation works in Indus Right Bank Division	XI & XII
Do. do. Left Bank Division	XII to XIV
Work done by the Indus River Commission	XIV to XVI
Summary of Irrigation Revenue	XVII
Administrative Accounts, Public Works Department (Irrigation), for the Bombay Presidency	(1) to (139)
Statistical Statements for Irrigation Works, Deccan and Gujarát :—	
Statement I A—Statement showing size, command, length and cost of canals.	2 & 3
Statement II A—Statement showing details of catchment area, storage, command and cost of reservoir projects	4 & 5
Statement I B—Capital Account of Irrigation Works for and to end of 1905-06	6 to 9
Statement I C, showing financial results of irrigation works for the year ending 31st March 1906. Realizations under main heads of revenue and working expenses	10 & 11
Statement II C, showing financial results of irrigation works based on actual receipts	12
Statement III C—Demands and realizations during the year 1905-06	13
Statement IV C, showing the financial results of irrigation works for 1905-06 based on assessments	14
Statement I E, showing areas irrigated and average discharges and duty of water in regard to irrigation works during 1905-06	15 to 17
Statement II E, showing incidence of working expenses and assessed revenue on certain irrigation works during 1905-06	18 & 19
Statement III E, showing quantity and value of crops irrigated during 1905-06	20 to 23
Statement IV E—Comparative statement of irrigation and rainfall for the years 1904-05 and 1905-06	29 to 31
Statement F, showing remissions on irrigation works for the year 1905-06	32
Statement I F, showing water-rates per acre in force during 1905-06	33
Statement G, showing areas and water-rate assessments during 1905-06 according to the system of classification adopted in fixing the scale of water-rates.	34
Statement H, showing operations of the year 1905-06	35 to 37
for Sind :—	
Statement showing size, command, length and cost of canals.	40 to 43
Statement I Account of Irrigation Works for and to end of	44 & 45
Statement II showing the financial results of irrigation works for the year ending 31st March 1906. Realizations under main heads of revenue and working expenses	46 & 47
Statement III showing the financial results of irrigation works for 1905-06 based on assessments	48
Statement IV showing the financial results of irrigation works for 1905-06 based on assessments	49
Statement V showing the financial results of irrigation works for 1905-06 based on assessments	50 & 51
Statement VI showing areas irrigated and discharges and duty of water in regard to certain works during 1905-06	52 to 55
Statement VII showing incidence of working expenses and assessed revenue on certain works during 1905-06	56 & 57
Statement VIII showing quantity and value of crops irrigated during 1905-06	58
Statement IX E, showing quantity and value of crops irrigated during 1905-06	59 to 66
Statement X E—Comparative statement of irrigation and rainfall for the years 1904-05 and 1905-06	68 to 71
Statement XI Northern Division.	
Statement XII Northern Division.	
Statement XIII showing the work done by the Superintending Engineer on Special Duty in the Indus Right and Left Bank Divisions.	

ADMINISTRATION REPORT

OF

IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1905-1906.

GENERAL.

The direct and indirect receipts and expenditure of the Irrigation Department during the year were as follows :—

Class of Works.	Direct Receipts.	Indirect Receipts.	Total, Direct and Indirect Receipts.	DIRECT EXPENDITURE.		
				Capital	Working Expenses.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Major Irrigation Works { Deccan and Gujarát.	6,97,547	4,031	7,01,578	3,09,561	2,43,473	5,53,034
{ Sind	3,24,000	26,42,753	29,66,753	1,15,304	9,86,498	11,01,802
Minor Irrigation Works for which Capital and Revenue Accounts are kept. { Deccan and Gujarát.	1,43,963	5,249	1,49,212	1,31,323	98,292	2,32,615
{ Sind	83,707	15,60,648	16,44,355	2,13,841	4,13,613	6,27,454
Total, Deccan and Gujarát ...	8,41,510	9,280	8,50,790	4,43,884	3,41,765	7,85,649
Total, Sind ...	4,07,707	42,03,401	46,11,108	3,29,145	14,00,111	17,29,256
Grand Total, Deccan and Gujarát and Sind ...	12,49,217	42,12,681	54,61,898	7,73,029	17,41,876	25,14,905
Grand Total for 1904-1905 ...	11,35,276	30,80,405	42,15,681	8,80,398	16,48,408	25,28,801

2. The following table gives the areas irrigated by the several canals in 1905-1906, compared with those for the year 1904-1905 :—

Names of Canals.	1904-1905.	1905-1906.	Difference.
	Acres.	Acres.	Acres.
MAJOR IRRIGATION WORKS.			
<i>Deccan and Gujarát.</i>			
Nira Canal	48,822	36,912	—11,910

Total, Irrigation Major and Minor Works for which Capital and Revenue Accounts are kept...	2,414,752	2,686,512	+ 271,760

3. The above table does not include works for which only Revenue Accounts are kept or "Agricultural Works"; including these, the total area irrigated in Sind was 3,693,314 acres, and is the largest yet reached. Details will be found on Statement IV E.

* Area on which consolidated assessment is levied.

In the year 1905-1 expenditure on Irrigation Works throughout the Presidency amounted to Rs. 48½ lakhs as compared with 48½ lakhs in the previous year. This outlay was divided between Sind and Presidency proper in the proportion of 2½ to 1.

2. The expenditure was distributed under different heads as under :—

Heads.					Amount.	Remarks.
<i>Capital—</i>					Rs.	
<i>Major Works—</i>					Rs.	
Protective Works	(a) 2,77,245		
Productive Works	(b) 1,15,304		
<i>Minor Works and Navigation—</i>					3,92,549	Imperial.
Works for which Capital and Revenue Accounts are kept					3,80,480	½ Imperial and ½ Provincial.
<i>Revenue—</i>						
<i>Major Works—</i>						
Protective Works	81,114		
Productive Works	9,82,858		
<i>Minor Works and Navigation—</i>					10,63,972	Do.
Works for which Capital and Revenue Accounts are kept					4,09,491	
Works for which only Revenue Accounts are kept					11,46,813	
<i>Agricultural Works—</i>					15,56,304	Do.
Works for which neither Capital nor Revenue Accounts are kept...					11,61,650	
Contribution Works					21,904	
<i>Construction of Protective Works—</i>					11,83,554	Do.
Works for which neither Capital nor Revenue Accounts are kept					(c) 2,10,801	Imperial.
Famine Relief outlay on Irrigation Works					45,094	Provincial.
Grand Total					48,32,754	

3. The total is classified as under :—

	Deccan and Gujarát.			Sind.	Total.
	Rs.			Rs.	Rs.
Works	5,39,398			5,87,775	11,27,173
Repairs	4,40,044			17,30,047	21,70,091
Establishment	4,90,690			7,55,454	12,46,144
Tools and Plant	42,834			2,27,568	2,70,402
Refunds of Revenue	2,979			50	3,029
Gratuitous Relief	788			788
Suspense Account	1,584			14,786	16,370
Receipts on Capital Account	-1,243			-1,243
Total	15,17,074			33,15,680	48,32,754

(a) Inclusive of Rs. 52,534 on account of expenditure in England.

(b) Do. Rs. 3,496 do. do.

(c) Do. Rs. 2,322 do. do.

DECCAN AND GUJARAT.

Northern Division.

The rainfall during the year exceeded the average by 10.54 inches but most of it fell in four days in July 1905. Very little rain fell after that. The discharge in the Hathmati river, which was 30 cusecs in August, fell to 6 cusecs in October, and the river practically ceased to flow in November. The flow in this river previous to 1899 was perennial.

Hathmati and Khari Cut Canals.

Abnormally heavy rain fell from 22nd to 25th July; the total fall on these four days as registered at Ahmedabad being 32.82 inches, and the Khari Cut Canal was breached in several places. The Chandola and Vasai Reservoirs, which are the principal storage tanks under the Khari Cut system, also breached, and but for the Bokh Reservoir near Parantij, which stood satisfactorily, there would have been little or no irrigation under this system.

The areas irrigated and the assessed revenue on the two systems compared with the average of the previous ten years are given in the following statement :—

	1905-1906.		Average of past 10 years.	
	Area irrigated.	Gross assessed Revenue.	Area irrigated.	Gross assessed Revenue.
	Acres.	Rs.	Acres.	Rs.
Hathmati Canal	575	1,609	2,067	5,435
Khari Cut Canal	1,495	4,734	1,750	7,446

The decrease is due to the flow of the river having dried up.

Khari Sluices.

The Gobraj Tank, which has been recently constructed to protect a part of the Khari Sluices District, was breached by the heavy rain in July, and though the breaches were immediately repaired, the tank did not fill again as there was no subsequent flood in the Khari river. Good progress was made with the Bherai Reservoir—another storage tank connected with this system. The twelve villages served by the Khari Sluices possess more than 7,000 acres of the best rice land in Gujarát, but there has been more or less a failure of the crop during each of the last seven years. The irrigation is entirely dependent on the precarious discharge of the Khari river, which has also ceased to be perennial since 1899. There would have been no rice crop in this area if the natural flow of the river had not been supplemented by the Bokh Reservoir, constructed in recent years.

The removal of the 'gha bajoria' weed from the central portion of the Khari river has increased the river discharge; the channel excavated last year has widened considerably.

New tanks in Kaira and Panch Maháls District.

Good progress was made with the completion of the five large tanks in the Kaira and Panch Maháls Districts begun in the famine. The tanks and canals at Tranza, Muvalia and Wangroli were practically finished and the Nagrama Tank almost so. The Savli Tank will be in operation in June 1907. The combined protective capacity of these tanks is 7,000 acres, and a sum of Rs. 96,660 was spent on them during the year. Water was issued from the Wangroli and Tranza tanks, the areas protected being 903 and 223 acres respectively, bringing in a revenue of Rs. 2,500. The waste weir channel of the Muvalia Tank in the Panch Maháls was badly scoured by the abnormal flood of July, the damage was temporarily repaired and irrigation was not interrupted. A new waste weir has been sanctioned and is approaching completion.

Old Tanks.

Many old tanks and bunds in Gujarát also breached or were damaged. All breaches have been closed and a sum of Rs. 60,000 was expended on repairs to these and other small tanks.

Drainage Channels.

The Chekhla drainage channel in the Ahmedabad Collectorate was the only original work of this nature in progress. The old drains worked most satisfactorily and it is worthy of record that if the drainage channels in the Viramgám Taluká had not existed, the town of Viramgám and many villages would have been flooded in July 1905. A sum of Rs. 21,850 was spent on the construction and repair of drainage channels in the Ahmedabad, Kaira and Panch Maháls and Surat and Broach Districts.

Survey and Projects.

The survey of the proposed Mahi Canal was continued and the project is now under preparation. The Sábarmati Canal project, for irrigating 30,000 acres in the Dholka and Sanand Talukas, was also prepared and has since been submitted to Government. The survey of more small tanks in the Surat, Broach and Panch Maháls Districts was carried on with a view to their gradual repair.

Floods and discharges of catchment areas.

Unusually heavy rain fell in Gujarát in the month of July. The fall recorded at Ahmedabad on 23rd and 24th of that month was 9.28 and 18.68 inches respectively, that is, a total fall of 27.96 inches in 48 hours.

The following results are also noteworthy:—

On the Kharághoda Tank in Ahmedabad District, which has a catchment of 43 square miles, the flood water rose to a level of 21 inches over the waste weir, giving a maximum run-off of a little over $\frac{1}{2}$ inch per hour.

On the Wangroli Tank in Kaira District, catchment area 13 square miles, the calculated maximum run-off was $\frac{2}{3}$ rd inch per hour.

The same tank received a replenishment of nearly 194 million cubic feet representing a run-off of 6.4 inches in 13 hours from the whole catchment.

Central Division.

(a) *Nature and purpose of any large works which have been undertaken or were in progress during the year.*

NÁSÍK AND AHMEDNAGAR IRRIGATION DISTRICT.

The masonry dam at Chankapur in the Kalwan Taluka of the Násik District intended to store water for a small new canal—the Girna Left Bank Canal—and to extend irrigation on existing bandháras or weirs was in progress during the year. The masonry of dam was brought up to undersluice level and the masonry of both the north and south waste weirs was in progress, the expenditure during the year being Rs. 1,75,920.

The Girna Left Bank Canal alluded to above was in progress, the weir at the lead-works and the first four miles of canal being practically completed.

The masonry waste weir for the Waghad Tank was in progress. This reservoir, which will contain 617 million cubic feet when the weir is completed and automatic gates are fixed, provides storage for the Palkhed Canal in the Násik District. Certain improvements in the shape of new masonry works were also in progress on this canal.

v

AHMEDNAGAR DISTRICT.

The Visapur Tank on the Hunga River in the Shrigonda Taluka of the Ahmednagar Collectorate, which will consist of an earthen dam 80' high, was originally started to give work during the late famines and has latterly been kept open to give employment to the Deccan Convict Gang. Famine Relief Work was opened towards the end of the year under review, the relief workers being employed at a different part of the dam so as not to interfere with the Convict Gang.

SHOLAPUR DISTRICT.

The Budhihal Tank in the Sangola Taluka, for which the earthen dam will be 8,675' long and 61' high, impounding 1,062 million cubic feet, was in progress during the year. This work was originally started to give work to people requiring relief during the late famines.

Work was commenced on the Left Bank Canal of the Wadshivane Tank, a small tank in the Karmala Taluka, which was commenced and completed as a famine work. The tank stores 203.23 million cubic feet above the outlet.

FAMINE RELIEF WORKS.

The following canal and tank works were also opened during the year to give work for relief :—

Poona District—

Nira Right Bank Canal.
Victoria Tank at Warwand.

Nasik and Ahmednagar Irrigation District—

Godaveri-Right Bank Canal.

Ahmednagar District—

Musalwadi Tank.

Sholapur District—

Bhamburdi Tank.
Mangi Tank.

The number of people employed on these works was never great and the amount of work done was not large. The two canals, the Nira and Godaveri, were opened at first as ordinary works on a particular system calculated to give a certain amount of relief, but were afterwards turned into regular relief works on the Code system. These two important works were surveyed and the projects prepared by the Superintending Engineer on Special Duty. The Victoria Tank at Warwand in the Poona District is a small tank; the earthen dam will be 47' high and be able to store 398 million cubic feet for irrigation purposes at the tail of the Mutha Right Bank Canal.

The Musalwadi Tank is a tail tank on the Ojhar Right Bank Canal, one of the canals of the Pravara system. The tanks at Bhamburdi in the Malshiras Taluka and Mangi in the Karmala Taluka of the Sholapur District will be capable of impounding 463.6 and 1,241.4 million cubic feet respectively.

The following statement shows area irrigated and assessed revenue on the Irrigation Works in operation during 1905-06, as compared with the average of the last 10 years :—

Names of Works.	1905-06.		Average of past 10 years.	
	Area irrigated.	Gross assessed Revenue.	Area irrigated.	Gross assessed Revenue.

*The decrease as compared with the average is due to heavy remissions during the year as per Canal Return No. VIII.

There was a slight decrease of 1,487 acres in the area irrigated on Major Protective Works during the year, as compared with the average of the last 10 years, but there was on the other hand an increase of Rs. 63,412 on the gross assessed revenue. The decrease in area on the principal work, the Nira Canal, was due to the scanty rabi supply caused by the partial failure of the rains and to the area of sugarcane being larger than the average of the last 10 years. The increased revenue is due to the increase of sugarcane. The Shetphal Tank, a regulating tank at the tail of the Nira Canal, came into operation about 4 years ago and the area irrigated during the year was much larger than the average of the last 4 years, though less than in 1904-05. The increase of revenue is due to rise in area of sugarcane. The decrease in area and revenue on the Mhaswad Tank was due to insufficient supply.

In the case of Productive Works there was a slight rise in the area amounting to 1,713 acres and a considerable rise in the gross assessed revenue of Rs. 98,165. The principal rises are on the Mutha Canals, where there was an increase of 717 acres in the area and of Rs. 78,759 in the revenue, and on the Ekruk Tank where the area is 2,094 acres more than the average and the revenue Rs. 18,033 more. In the case of the Mutha Canals, a part of the increase in revenue, which was greater than that of 1904-05 by Rs. 29,500, was due to the extra area of sugarcane for which the additional supply due to the automatic gates was utilized; the increase due to this is estimated at Rs. 18,000. The rise in revenue on the Ekruk Tank was due to more highly assessed crops being grown on the Ekruk Canal.

For the other Productive Works there is a fall in area but, except in the case of Lower Panjhra River Works and the Lakh Canal, a rise in revenue. The decrease in area is due both to deficient storage and to the same reason which causes the rise in revenue, namely, the gradual introduction of more highly assessed crops.

For works under Minor Works and Navigation there was a decrease of 5,840 acres in the area and Rs. 12,274 on the gross assessed revenue, the decrease being due principally to deficient storage caused by the poor rainfall.

(b) *Important events which have occurred concerning works.*

There were no events of much importance to record during the year. The swarms of locusts, which did so much damage in the previous year, fortunately did not make their appearance again. The rainfall was not satisfactory and the late rains failed entirely. Many tanks did not fill and the rivers ceased to flow early and the general results of irrigation operations during the year do not compare favourably with those of 1904-05. In spite of a decrease in areas, however, the gross assessed revenue on the two largest works in the Central Division, the Nira and Mutha Canals, showed in each case increases over that of 1904-05. This was mainly due to the increase in the area of such high-rated crops as sugarcane, etc.

(c) Engineering questions that have arisen.

The automatic gates erected at Lake Fife have proved very satisfactory. Provision is being made for automatic gates in the case of the reservoirs at Chankapur and Waghad. Undersluices for the Chankapur reservoir on the Stoney pattern have been received from England and will be erected during the ensuing working season. Owing to the tanks not having filled, the experiments made in finding the line of saturation in dams by driving pipes into the rear slopes have not been satisfactory. They will be continued, however, and it is hoped valuable information may be obtained.

Surveys, etc.

A survey for the enlargement and extension of the Ojhar Left Bank Canal was completed and a complete project for supplementing the supply to the Ojhar Right and Left Bank Canals has been submitted to Government. For the storage reservoir a masonry reservoir at Bandardarra 250' high is proposed, capable of impounding 8,000 million cubic feet. The earthwork of the Ojhar Right Bank Canal was partially carried out during the famine of 1900, and the project provides for its completion as well as the enlargement and extension of the Ojhar Left Bank Canal. The area that it is proposed to irrigate by the two canals is 49,440 acres. Surveys for an earthen dam across the Kara river near Jejuri in the Poona District, and for improvements to the water-supply for Poona and Kirkee Cantonments and the Poona City, were also in progress during the year.

In the Khándesh Irrigation District surveys were made of a scheme for drainage of certain land reclaimable in the Sháháda Táluka, and preliminary surveys of a large irrigation tank at Karwand in the Satpurá hills were carried out. A project for a storage tank at Khandbara on the Kan river in Pimpalner Táluka was also under consideration. There is a regular bandhára system on the Kan which at present suffers for failure of water-supply and for which a storage reservoir is highly desirable. The Manad and Panjhan rivers, tributaries of the Girna, were also prospected with a view to finding out, if possible, a suitable site for a storage reservoir for the Jamda Canals. Surveys for improvements to a large number of bandháras in the Khándesh Irrigation and Násik and Ahmednagar Irrigation Districts were undertaken during the year and a considerable number of these works were also improved.

(d) Results of new administrative measures affecting the department which have been tried.

The introduction of the Block system of irrigation into 30 villages under the Nira Canal and 2 under the Shetphal Tank, which was commenced in 1904-05, was completed during the year under report and is working satisfactorily. The object of the system is to locate the irrigation in each village for a term of years in selected areas, so that, instead of being scattered and shifting as at present, it may be concentrated in blocks. The system will enable the canal water to be used economically and the benefits of irrigation to be distributed over a larger number of villages than at present. With the experience gained in the kharif and rabi seasons of 1905-06 the cultivators have fully realized the value of the system and have applied for a much larger area than could be safely sanctioned under the two works. The total area sanctioned under block up to date is about 18,000 acres under the Nira Canal and 2,070 acres under the Shetphal Tank. The system was also introduced on the Bhadalwadi Tank during the year.

The self-acting module designed by Mr. M. Visvesvaraya for the delivery of water through an outlet at a uniform rate, irrespective of the variation of level in the canal, which was erected on one of the distributaries of the Mutha Right Bank Canal in 1904-05, was worked during the year. It worked satisfactorily, but the canvas hose, which forms part of the module, requires to be renewed at about intervals of four months. A new self-acting module designed by Mr. A. T. Mirza, mechanical engineer, was erected for experimental purposes at the Poona Pumping Station. There is no canvas hose or anything which can apparently get out of order. Orders were received to remove the module from its present position and give it a thorough trial for six months on one of the distributaries of the Mutha Right Bank Canal.

Two new stations were opened during the year on the telegraph line on the Nira Canal. The telegraph line is proving of great assistance in the efficient regulation of the supply of the canal.

Five rain gauges were specially maintained in the catchment area of the Ekruk Tank to compare the rainfall on the catchment with the quantity of water received by the tank. These gauges were self-registering and worked fairly satisfactorily but do not read small falls accurately.

Southern Division.

No large works were undertaken during the year. In addition to the maintenance and improvements to 1st and 2nd class works it was found necessary to provide for famine relief labour, and irrigation works were commenced in two districts as described at the end of this report.

The area under irrigation and gross assessed revenue on all the 1st class irrigation works of the Southern Division are shown below in two statements, detailed in one by works, and in the other by districts. The figures for the past year are compared with the average of the previous 10 years :—

Name of Work.	1905-1906.		Average of previous 10 years.	
	Area Irrigated.	Assessed Revenue.	Area Irrigated.	Assessed Revenue.
<i>Major Works.</i>	Acres.	Rs.	Acres.	Rs.
Krishna Canal	10,107	52,707	5,338	47,363
<i>Minor Works.</i>				
Rewari Canal	166	1,356	965	5,180
Upper Man River Works	226	1,418	1,295	4,590
Yerla River Irrigation Works	1,520	10,109	3,164	11,558
Chikbli	192	1,392	372	1,715
Maini	792	3,125	1,498	5,265
Muchkundi	2	302	46	397
Gaddikeri	(a) 337	1,987	337	1,987
Dambal	(b) 266	1,498	362	1,921
Medleri	141	721	95	616
Madag	741	2,655	900	2,305
Asundi	(b) 292	1,191	319	1,376
Mavinkop	(a) 573	2,164	547	1,986
Gokák Canal	11,084	62,122	8,726	37,947
	16,332	90,040	18,626	76,843
Total	26,439	1,42,747	23,964	1,24,206
Name of District.				
Belgaum	11,421	64,109	9,063	39,934

Sátára	13,003	70,107	12,632	75,671
Bijápur	2	302	46	397
Total	26,439	1,42,747	23,964	1,24,206

(a) Area under consolidated assessment.

(b) Includes area under consolidated assessment.

On the whole the irrigated area and revenue were about 1/7 above the average, but the difference was considerable on individual works. The rabi rain failed everywhere, so the small tanks and streams dependent on this rain were unable to supply water for rabi irrigation. Omitting the Krishna and Gokák Canals, the area of irrigation was 5,248 acres against 9,900 acres of the previous 10 years. On the Krishna the area was nearly double the average, but the crops were low-rated ones, and on the Gokák where the water-rates have recently been raised, an increased irrigated area was obtained.

Gokák Canal,

The water flowed over the weir on the 7th July 1905, and the greatest flood occurred on the 26th July; its depth was only 1.94 feet over weir crest representing a run-off of 28,000 cubic feet per second, or 0.04 inch per hour from the catchment area of 1,080 square miles. An increased storage of 192 million cubic feet, equivalent to nearly a month's supply for Mills and irrigation, was obtained by raising a wall 1.7 feet high on the weir crest after the monsoon. In spite of this, however, the water did not last beyond the 1st June 1906 and the Mills were without their regular supply until 20th June. The only previous occasion on which a failure of this kind took place was in 1900, when the tank was dry for 7 weeks. The storage was first drawn upon on the 5th December 1905. The observations for evaporation were continued. The water level is measured in an iron tank placed in the reservoir. The loss due to evaporation alone (omitting the period from 1st June to 30th November) amounted to 4.42 feet in vertical depth, the same as the previous year's record.

Muchkundi Tank.

Only 2½ feet depth of water was stored above the canal sill level.

Maini Tank.

The weir is being raised by 6 feet; this will store 112 million cubic feet above the present full supply level. The dam was raised in recent years by famine labour. The loss in the tank capacity due to silt is about 32 million cubic feet, which is 1/5 of the original volume stored.

Silt in Tanks.

Observations are being made to ascertain the extent of the annual silt deposit in the various tanks, which will yield useful information.

The line of saturation in earthen dams is also being observed by recording periodically the water level in vertical pipes laid in the dam section. The results of the past year have been of no particular value, because the replenishment to the tanks was so deficient. Saturation of Earthen Dams.

The surveys in connection with the Madag Tank Canal in Dhárwár have been completed and the project is under preparation. Projects.

The Hullur Tank project, Bijápúr, has been submitted to Government. It is a small scheme; the average area of irrigation may amount to 1,100 acres.

The block system of irrigation has not yet been introduced on any of the works in the Southern Division. The Gokák Canal cultivators already make free use of the water available and see no use in binding themselves down for a term of years. The question of introducing the block system on the Dhárwár and other tanks with an intermittent or non-perennial water-supply is under consideration. Block System of irrigation.

The expenditure on repairs to second class tanks was as follows:—

2nd class works.

District.	1905-1906.		Average of previous 10 years.	
	Number of tanks repaired.	Cost.	Number of tanks repaired.	Cost.
		Rs.		Rs.
Belgaum	49	32,540	26	17,230
Dhárwár (with Kánara)	169	96,496	60	50,460
Ratnágiri	4	133	2	691
Kolaba	1	32	1	28
Bijápúr	<i>Nil.</i>	3	1,410

In Bijápúr the Sangogi Tank was finally abandoned, as it was not a useful project, and the re-filling of the puddle trench was commenced by famine labour. The Kalaskop Tank was also begun as a famine work. It is a small project to the south of Kaládgi, the estimates of which are still under preparation. In Sátára, work re-commenced on the Goregaon Tank dam. These works were begun in February and March 1906. Famine Relief Works.

Work done by the Superintending Engineer on Special Duty.

The Gokák Canal Project, submitted to Government in March 1905, has recently been returned, so that the information obtained from the further surveys and investigations during the past year may be embodied in the report, and the project modified as required.

The following projects were submitted to Government during the year:—

(1) The Godáveri Project. This comprised one large tank on the Darna River, 14 miles to the north-east of Igatpuri, a pick-up weir forming a small basin, on the Godáveri, 8 miles south-east of Niphád, and two canals starting from this point. The left bank or northern canal, 48 miles long, is to extend up to the boundary of the Nizam's State, to the east of Kopargaon, and the Right Bank Canal, 72 miles long, will end after crossing the Dhond apmád Railway near Chikli Station; the canal terminates at this point, because the land beyond will be commanded by the new Fr vara Project. The total area of land under the two Godáveri Canals will be 24,000 acres. The cost of the project (direct and indirect) is estimated at Rs. 88,24,100, and the net revenue, neglecting interest, at Rs. 2,28,439, but these figures have been amended by the Government of India. Godáveri Project.

The project was submitted in July 1905 and has since been forwarded to the Government of India.

(2) The Ghod Project. This is a comparatively small scheme. It includes a tank at Nirgudsar on the Ghod River, about 8 miles east of the Poona-Násik Road, and a canal, 59 miles long, on the right bank running eastwards to Sirur and then southwards. The command is 122,000 acres in a region, which is constantly famine-stricken. The estimated cost is Rs. 83,03,627 and the net revenue Rs. 88,129. The canal passes through difficult country; the cost is therefore very high. Ghod Project.

This scheme remains in abeyance pending further investigations in connection with the supply of water to the proposed large Ankari Left Bank Canal.

The Nira Right Bank Canal Project was under preparation at the end of the year, but it was not submitted to Government till the end of May 1906. A second preliminary report was sent in on the Mula Project (Ahmednagar) in December 1905. The difficulty in this case lies in the position and design of the canal head-works. Further information is being collected. Nira Right Bank and Mula Projects.

The papers in connection with the small Mina Project (Poona District) were under preparation, but the report cannot be written until the larger and more important projects, viz., the Nira and Gokák Canals are finally disposed of. Mina Project.

same.

The surveys carried out during the year were mostly in connection with new tanks and canal alignments, but preparation had also to be made for famine relief labour. Therefore certain suitable places were selected on the Gokák, Nira, Godáveri and Ghod Canals, and the curves were ranged and the land widths marked out. Subsequently on receipt of definite orders to start the excavation of the first three canals, the careful measurement and pegging out of the sidewiths had to be done also, but work was confined to the first few miles of each canal.

Gokák Survey.

The surveys on the Gokák Project included the completion of work on the Ajra and Daddi tank schemes. The Daddi tank will, it is hoped, replace the projected tanks at Rajgoli and Hadlag, drowning the same area in the former valley, but much less above Hadlag. The information regarding the trial pits is not yet complete. The first 40 miles of the Gokák Canal alignment have been revised, as proposed, and has resulted in a considerable saving in length and the avoidance of a long tunnel.

Nira Right Bank Canal Survey.

The Nira Right Bank Canal alignment was re-surveyed from 160 to 320 miles, and a considerable increase of command has been obtained. It appears probable that the water-supply will not suffice for a high proportion of irrigation on the 1,200,000 acres that can be commanded, so a shorter canal may be constructed in the first instance. Surveys were commenced to ascertain the height to which the water level would be raised at Lake Whiting to store the river discharge of an ordinary year. The Nira Project includes a raised tank at Vir (canal headworks) and a raised tank at Bhatghar, with depths of water of 100 feet and 165 feet respectively.

Kukari Left Bank Canal.

The Kukari Left Bank Canal alignment was completed for a length of 140 miles. This gave the command necessary for the water-supply available, and took the canal through the Visápur tank and the Shrigonda taluka into the Sholápur District near Karmála. Some small tributary nálas were examined, with a view to utilize their flood discharges by means of the canal, but the results were not very favourable. Another tank site above the Visápur dam was also examined. The present proposal in connection with the Kukari Project is to abandon part of the high level canal, and fall back upon the original low level alignment, in order to make use of the surplus water in the Ghod River in addition to that of the Kukari.

Mula Survey.

The Mula Survey in Ahmednagar has proved that the right bank canal will pass through easy country after it leaves the river, some 8 miles above Ráhuri, but the foundations for the dam or weir at this point are very unfavourable. Another site about 16 miles further upstream has good foundations, but the intermediate length of canal line presents extraordinary difficulties. This portion is now under examination by Mr. Benson, Executive Engineer, Ahmednagar.

Násik Project and the Darna Right Bank Canal Surveys.

The preliminary surveys for the small Násik Project were completed. The command of this scheme would not exceed 30,000 acres. The investigations in connection with the Darna Right Bank Canal Project were completed.

Rain and River Gauges.

Rain and River Gauges.—No new rain gauges were put up during the year, but a number of new river gauges were sanctioned by Government and observations were made on them, viz. :—

District.	River.	Site.	In charge of
Ahmedabad	Meshwa	Harsol	Executive Engineer, Gujarat Irrigation.
Broach	Narbada	Gardeshwar	Do. Surat and Broach.
Surat	Tápti	Dholan-Párdi	Do. do.
Khándesh	Manad	Dam site	Do. Khándesh Irrigation.
Do.	Panjhra	Pankheda	Do. do.
Do.	Aner	Ganpur	Do. do.
Násik	Odal	Dam site	Do. Násik and Nagar Irrigation.
Khándesh	Tápti	Bhusáwal Railway Bridge	Do. Khándesh Irrigation.
Do.	Panjhra	Dhulia-Agra Road Bridge	Do. do.
Poona	Bhima	Dhond Railway Bridge	Do. Poona Irrigation.
Sátára	Yerla	Yerlwádi Dam site	Do. Sátára Irrigation.
Belgaum	Krishna above Kudchi	Kusnal	Superintending Engineer special Duty.
Do.	Markandeya	Shirur	Do. do.

The discharges of the rivers have been worked out from the observations. In some cases the standard discharge tables have been worked out. Occasionally the sections of the gauge site change during the monsoon; then the standard table requires alteration.

This was the fourth year of work on Special Duty Surveys, and the expenditure was

	Rs.
Establishment	1,49,158
Works	49,420
Tools and Plant	9,836
Total	2,08,414

The Ghod, Mina and Kukari Projects are a group of canals on the tributary streams of the Left or North Bank of the Bhima. The Kukari Canal has a much larger command than the one tributary the Kukari can supply, and surveys are in progress to ascertain whether the whole of the water of the Ghod, Mina and Kukari cannot be collected and delivered on to the famine lands of Ahmednagar and Sholapur on the Left Bank of the Bhima. Should this be practicable, the Kukari Canal will rival the Nira Right Bank Canal in importance and far-reaching protection to the worst famine districts.

SIND.

The inundation of 1905 was exceptionally favourable.

Character of
the Inundation.

The river commenced to rise early in the season and by the 22nd May it had reached the air irrigating level of 13 feet on the Bukkur gauge. This level was maintained for the following periods during the inundation:— 22nd to 23rd May, 2nd to 14th June, 20th June to 23rd August, and 17th to 22nd September, in all 86 days—the largest number on record since 1878, and 52 in excess of the average number for the previous ten years.

On the Kotri gauge the fair irrigating level of 17 feet was registered from 11th to 17th June, 28th June to 27th August, and 24th to 25th September, in all 70 days—the largest number on record since 1897, and 29 in excess of the average number for the previous ten years.

The highest readings for the year were 16·7' and 19·1', respectively, on the Bukkur and Kotri gauges, being 0·4' and 0·6' below the maximum readings in 1903.

The rainfall was considerably in excess of that of the previous year, being 3 inches 74 cents as compared with 1 inch 49 cents in the previous year. The average of the last ten years was 4 inches 15 cents.

Indus Right Bank Division.

The Mahi Wah project, as originally sanctioned, has been completed. The project has, however, been revised on account of the inadequate provision made in the original sanctioned project for road bridges, karia sluices, and improvements of certain existing canals. Two new additional branches are also now considered necessary in the Ubauro Taluka to bring the water-supply within easy reach of the cultivators. The new feeder to the Tulsi Dhand, commenced during the previous year, was completed at a total cost of Rs. 25,663.

Mahi Wah.

Very little work was done on the Satta Canal improvement project during the year. Expenditure to the extent of Rs. 1,531 was incurred on Rajbhas and karia sluices, etc.

Satta Canal.

The Mahi Wah and the Satta Canal are on the left bank of the Indus, but are in charge of the Superintending Engineer, Indus Right Bank Division. The Satta Canal is in the lower delta.

The Desert Canal was opened on 1st June. The head remains as favourable as ever, and practically the whole of the main canal received an excellent supply down to the tail, and there was a great increase of rice cultivation. From 11th September rotations were introduced between the Uch, Manuti and Desert Canal tail, which worked very satisfactorily until the canal was closed at the end of January 1906.

Desert Canal.

On the Uch Rajwah very large areas of rabi were again cultivated, particularly in Khelat lands.

The Escape channel above the head regulator had to be almost entirely rebuilt, owing to erosion and the pavements of both the 27th and 30th mile falls had to be considerably extended and repaired.

The Adiwah, which was completed in 1903-1904, worked exceedingly well and brought a large area of kharif crop to maturity without any remissions due to want of water.

The Unhar Wah was opened on 31st May and the whole system received an exceedingly good supply, nearly all "lift" lands getting "flow" water throughout the season. The feeder channel, which was silted last year, is now quite clear, and gave an excellent supply of water comparatively free from silt, right up to 17th November when the canal was closed. All other crops did splendidly, and rabi crops showed a great increase.

Unhar Wah.

The Begari Canal was opened on the 20th May; the average discharge was 4,800 cusecs, but maximum of 8,815 cusecs was reached on one day, and for eight days the discharge exceeded 8,000 cusecs. This is a larger maximum than has been reached hitherto, but the lands on the tail of the canal did not benefit; the excess was taken off from mile 40 to 70, for rice, through masonry sluices, very much too large for the areas fairly dependent on them and in spite of temporary obstructions on the canal sides of these sluices. This take-off is no new thing; in the Abkalani report of 1904-1905 it was mentioned that a rise of 2 feet at the head of the Begari gave a rise of 1 foot only at the tail. There is no regulator on the canal between its 38th mile and its tail at Khaira Garhi. The tail lands were to some extent compensated by a fair rabi supply. The figures of actual cultivation are not yet available, but it is understood that whilst the area under rice on the upper reaches was much increased, the total area under irrigation is not larger than previously recorded.

Begari Canal.

The construction of the Choi branch *ex* mile 6 of the Begari has been sanctioned by Government and will be begun in 1906-1907.

2nd Canal.

The Sind Canal was opened on May 25th and closed on October 23rd. It worked satisfactorily. The work done during the year was (a) improvements to Chota Begari, (b) extension of channel No. 1, (c) cutting off a bend in mile 2nd Sind Canal, and (d) improvements to the tail of the Mangirwah. The expenditure was Rs. 14,879.

Sukkur Canal.

The Rahuja head of the Sukkur Canal began to flow on the 9th June. There is an approach channel $2\frac{1}{2}$ miles long between the river and the head regulator and the band used to close the head of this approach channel was washed away, owing to active erosion of the right bank of the river. The supply was excellent and it worked without the aid of the old head until 2nd September, when the latter was opened to supplement the supply. The deficiency below mile 60th was met by a system of rotation. The newly constructed Rajwahs were valuable in this direction. The Rahuja head ceased flowing on 1st November. The rabi supply from the old head was fair.

Ghar Canal.

The Ghar Canal was opened on 15th May and closed on 1st November. It worked satisfactorily throughout the season. The canal supply was, as usual, supplemented by the discharge from the Fordwah mouth in the 25th mile, which was opened on 14th June and regulated to meet the requirements in the lower reaches of the Ghar. The Fordwah was closed on 7th December.

Western Nara.

The widening of the Akil mouth of the Western Nara from 80 feet to 125 feet and the head regulator, commenced in the previous year, were sufficiently advanced on the 4th June to enable the canal to be opened.

The feeder to the Akil Dhand was completed during the year, but was eroded soon after it began to flow.

The Nara, owing to the improvements effected and to the excellent inundation, gave very successful results, but the high level of water caused sixteen breaches and several leaks, necessitating constant control of the supply at the head.

Works for which only revenue accounts are kept.

The canals under this head were opened on the usual dates and worked satisfactorily. Rs. 51,020 were spent on extensions and improvements and Rs. 2,54,739 on maintenance and ordinary and special repairs including charges for Abkalani and work establishment.

Kashmor Bund.

The river touched the Kashmor bund on 18th May and the 1896 loop gave a good deal of trouble until after the final rise in July, when a maximum height of 9'45" of water was registered.

These bunds are rendered much more secure and water-tight by wetting them. The "trench" system greatly facilitated the soaking of the bund and doubtless reduced the number of leaks; such as did occur were stopped, and this system should be continued.

Other bunds.

The bunds in the Shikarpur Canals, Ghar Canals, Western Nara, and Karachi Canals Districts were severely tried during the year but stood well. There were no breaches and the leaks were promptly closed.

Surveys

Contour surveys for improving existing canals in this Division were in progress.

The contour survey of the Karachi Canals District on the right bank of the river was completed; that of the left bank was commenced and the field work was practically completed.

Plantations.

Nurseries have been established and tree-planting along canal banks is being carried on. Owing to the previous severe winter many of the young trees died; all these have been replaced and many more seeds and cuttings planted, and they are all thriving.

,, Indus Left Bank Division.

The Eastern Nara system.

The Eastern Nara system comprises the Nara, the Mithrao Canal, the Heran, the Khipra, the Tkar and the Hiral Canals. All of these are perennial, excepting the Khipra and the Heran.

Mithrao Canal.

The works commenced in connection with the Mithrao Canal in 1903-04, and referred to in that year and the last year's reports, were completed; the expenditure during the year amounted to Rs. 20,431. A further capital outlay of Rs. 14,436 was incurred, Rs. 11,843 of which were spent on constructing a combined regulator and bridge in the 23rd mile of the canal, and the balance on additions and alterations to the 30th mile regulator. Both the works are in progress. The former work is carried out with the object of regulating the supply during the rabi season, and the latter for increasing the waterway.

The canal was maintained in good order and there were no breaches.

The supply was steady, and the crops both kharif and rabi are likely to be above the average, notwithstanding the fact that locusts have done some damage in some parts of the canal.

Hiral Canal.

The Hiral Canal was opened for irrigation on the 15th May and the full supply was reached on the 27th July. The canal worked exceedingly well, and far beyond expectations. The area under cultivation in this 3rd year of the working of the canal is expected to be about 35,000 acres as compared with the estimated annual cultivation of 14,000 acres.

The cultivation in 1903-04 was 23,667 acres, and in the last year, 31,438 acres. The out-turn of cotton and oil-seeds is not however upto the average, owing to strong winds in the beginning of the season. Locusts also did some damage in the first four villages on the canal.

The cultivation on other branches of the Eastern Nara is expected to be above the average. The Khipra Canal especially worked well; the cultivation is likely to be about double that of the past year, and much above the average.

The conditions at the Head Works of the Jamrao Canal are quite satisfactory and the groynes in the first ten miles have acted well. Groynes constructed in March 1905 on both sides of the Main Canal at mile 60, and below mile 71, and also in miles 9 and 10 of the West Branch, owing to heavy erosion, also stood well. All these groynes have silted up to berm level. Owing to sowing of Egyptian cotton, the canal was not closed for clearance during the months of April and May, as usual, but some of the minors which were heavily silted up were closed for a period of two to four weeks for necessary clearance.

Jamrao Canal.

The canal and its minors were maintained in good order at a cost of Rs. 1,24,664.

The cultivation is likely to be some 93,000 acres above the average of the past six years, and some 50,000 acres more than was expected to be irrigated according to the forecast statement.

No new colonists were imported from the Punjab, but an area of 16,815 acres was given to relatives of Punjabis, already settled on the canal, who had come to Sind in the hope of receiving grants.

Changes in the River course at the mouth of the Dad continue. The 85 feet cut made last year to feed the Dad at a cost of Rs. 32,345 was completely silted up, and would have caused severe loss but for the high and steady inundation. A new feeder at a cost of Rs. 74,000 was undertaken after the inundation. It is hoped that this new cut, which is from a "Dhand" or natural channel, which was last year's course of the River, but has now been abandoned by it, will give a better supply in the next season. The improved Dad Canal came into operation in 1901-02, and since then half a lakh of rupees is annually spent on the head of this canal and even then with no certainty of an assured supply. The frequent changes in, and the severe erosion of, the River in front of the head will cause this state of affairs to continue until a constant supply from a permanent head from Rohri is secured.

Dad Canal.

An area of 1,781 acres was given to local men in extension of their holdings.

The capital outlay of the year on the Nasrat was Rs. 1,47,344, and was incurred on masonry works and in excavating distributaries, regulators, karia heads, drainage and protective works.

Nasrat Canal

The canal had a plentiful supply and the cultivation has gone up. The mouth of Lundi Dhand (feeder to this canal) was affected by erosion of the River and caused the canal to cease flowing early in November. This raised a cry for drinking water; and to provide for this, the Bagwah, a branch of Naulakhi, then flowing, was cut to supply water to the Nasrat, till a small channel at a cost of Rs. 5,000 was dug in the bed of the Dhand to bring a supply for drinking purposes. This supply from the Dhand cannot be always depended on, as it may disappear in any year by severe erosion of the River and then the consequent injury to the mouth of Nasrat would be very disastrous, as there is not as yet drinking water available in the desert, where much of the increase in cultivation has taken place. The sub-soil water is below 60', and very scanty, and except in a few places it is undrinkable. An assured supply from Rohri can only be relied upon to avert any such disaster. Land is being rapidly taken up on the canal and an area of 23,005 acres was given out during the year, of which 7,754 acres were given to junior Talpurs, 979 acres to Military pensioners, 1,874 acres to local men, and 6,704 acres to persons specially recommended for grants of land.

The capital expenditure on the Fuleli during the year amounted to Rs. 21,442, and was spent on completing the contour survey of the district, on completing the distributaries of the Nasirwah diversion which have been described in former reports, and on constructing a Head Regulator over the Imamwah Jagir. The last work was undertaken with the object of preventing the Imamwah Jagir, a Jagirdar's canal ex: Fuleli, taking the increased supply in the Fuleli when the Alipur Regulator is closed, and when the supply in the Fuleli is increased by constructing a new regulator at its head at Jamshora, and which will be completed, it is hoped, before the next inundation.

Fuleli Canal.

The Fuleli and its branches worked well and cultivation is likely to be above the average of the last ten years.

The Gaja Extension Project, described in the previous year's report, was nearly completed during the year under report, the capital outlay amounting to Rs. 1,07,924. The extended portion of the Gaja, now fed direct from the River by the Hasanali Canal, came into operation during the year, and some 8 to 10 thousand acres of land were brought under cultivation.

The capital expenditure on the Hasanali Canal during the year amounted to Rs. 15,178, and was mostly incurred on paying compensation for private land taken up for the canal.

Hasanali Canal.

The canal worked well but the zemindars did not take advantage of the increased supply in the canal.

Canals in the Central
Hyderabad Canals
District.

The Great Marak, as usual, worked well. The Sarfraz and Alibhar which were given new mouths during the year under report also worked well. Cultivation is likely to be about the average.

Works for which
only Revenue
Accounts are kept.

The principal canals under this head are the Naulakhi, Mehrab, Dambro, Ren, Ghara Mahmudo and Nasir, all of which worked satisfactorily. To avoid the annual flooding at the tail of the Ren, the excavation of a diversion and the construction of a regulator at the 8th mile of the canal, estimated to cost Rs. 12,514, were commenced and the year's expenditure was Rs. 2,000 only.

Surveys.

The contour surveys in the Fuleli Canals District and the Eastern Nara District, described in former reports, were completed. A preliminary survey with a view to find a permanent mouth near Rohri, for the Dad and other inundation canals, having their mouths from "Kacha" banks along the Indus, and dependent on the vagaries of the River, was undertaken. From the estimated amount of Rs. 9,702 sanctioned for this survey, Rs. 3,000 were expended in the year.

River Bunds.

The only river embankment in danger owing to erosion of the river was the Naulakhi Bhorti Bund. Two loops, one behind mile 1, and the other in miles $\frac{4}{5}$ to $\frac{6}{5}$, were constructed, as the river threatened the bund at those points, and actually cut into them during the inundation. The Hajipur Bund in the Fuleli District, had a depth of 3 to 4' water against it, and stood well.

Plantations.

Tree-planting and establishing nurseries along canals is being carried on. The Jamrao Canal, its branches and minors now have avenues of young trees along their banks, which are growing well, except in places where the soil is "Kalar." Endeavours are being made to plant babul and other trees in front of bunds to protect them against wave wash. Hedges of babul trees and the goat foot creeper are being made to prevent sand from drifting into and choking canals.

Indus River Commission.

The principal works carried out during the year were "43-Minor Works and Navigation—Agricultural Works—Works for which neither Capital nor Revenue Accounts are kept".

Works.

All surveys carried out under the supervision of the Engineer are classed under this head. During the year further topographic surveys were made for a length of about 329 miles. In addition, a combined hydrographic and topographic survey was made of a length of about 35 miles below Kotri.

The total length surveyed was thus 364 miles. The surveys this year show an interesting case of the river returning from a shorter to a longer course. In this case a cut-off occurred during the Abkalani of 1904; the length of the old river-course was about $7\frac{1}{2}$ miles while the cut-off was only 3 miles in length when first surveyed, the cold weather surface gradient showing a fall of 3.57 feet in $3\frac{1}{2}$ miles or over 1 foot per mile by the new cut, being more than double the normal fall per mile. The river was flowing through the cut-off all the latter part of 1904 and up to the commencement of the Abkalani of 1905, heavy erosion taking place in the cut-off and below it. Owing to heavy erosion also taking place above the mouth of the cut-off and to the diversion of the main river current to the opposite bank, a great deposit of silt took place across the mouth of the cut-off which was silted nearly to the level of the river bank at this point and the river returned to its old course, the length of the curve, when surveyed in April 1906, being $4\frac{1}{2}$ miles approximately. This reversal of the usual order of things is extraordinary. The current velocity at the mouth of the cut-off was not very high and the depth of channel was small, being 6 feet maximum on a Bukkur gauge of 8 feet. It is possible, though the existence of such a bank is not known, that there may be a bank of clay across the mouth of the new cut which prevented its deepening. There is a similar instance below Kotri.

Special observations of depths of scour showed the ordinary maximum of about 45.50 feet with one remarkable instance of a scour hole reported to be about 100 feet deep in the Karachi Canals District at the mouth of the Sattah Canal. This scour was caused by a whirlpool, but the current was too strong for the depth to be established with certainty with the lead and the observation must therefore unfortunately be classed as doubtful.

The borings for survey of the site for the Sukkur weir were continued and the existence of a narrow gorge gradually working out up-stream was established. At the upper line of borings rock was met with right across the river; the gorge had a width of about 240 feet, with a maximum depth below Bukkur zero of 70.8 feet. As, however, the general rock level falls rapidly from the line originally selected by the late Mr. Dawson, that line is being adopted for a preliminary estimate for the weir and the final investigation will be made next cold weather.

Gauges have been established in the two branches of the river below the bifurcation and self-registering tide gauges are to be erected shortly.

The section line across the Delta laid out in 1899 has been retraced and re-levelled and properly marked with masonry pillars and bench marks. The result of this re-levelling shows that during the 7 years that have elapsed since the section was originally laid out, there has been no sensible accretion.

A section line further South, stretching from Shabbunder on the East and passing to the coast about 9 miles North of Keti Bunder, a distance of 32 miles in all, has been marked with masonry pillars and levelled. Two further section lines will be similarly laid out next year, so that the progress of accretion in the Delta can be watched.

The hydrographic sections at Kotri, laid out in 1899, have been re-levelled with the object of ascertaining the reason of the local rise in river bed at Kotri.

Similar section lines have been laid out at Sukkur and marked.

The discharges were measured regularly at Sukkur and Kotri throughout the Abkalani season and at intervals during the cold weather, the velocities being taken by Haskell current meters. Discharges of the Indus.

The maximum discharge measured at Sukkur for this year was 530,842 cubic feet per second on the 21st July 1905 when the mean velocity was 6.94 feet per second and the Bukkur gauge read 16.7 feet. The maximum gauge reading for the season at Bukkur was 16.7 on that date.

The minimum discharge measured at Sukkur for the year was 22,539 cubic feet per second on the 17th January 1906 and the mean velocity was 1.25 feet per second and the Bukkur gauge read 1.2 feet. The lowest gauge reading for the year was 0.5 on the 8th February 1906.

A comparison of the discharges of the river at Sukkur during the Abkalani months, June to September, in the years 1902-03 to 1905-06 is given below:—

Months.		1902-03.	1903-04.	1904-05.	1905-06.
		Cusecs.	Cusecs.	Cusecs.	Cusecs.
June	...	6,383,000	5,473,000	8,465,430	11,845,000
July	...	7,452,000	8,318,000	10,735,958	13,227,000
August	...	6,466,000	13,386,000	13,710,915	10,567,000
September	...	5,009,000	9,319,000	5,044,924	8,143,000
Total		25,310,000	41,496,000	37,957,227	43,782,000
Average discharge	...	207,459	340,131	311,125	358,869
Maximum do.	...	475,225	592,147	542,739	530,842
Minimum do.	...	86,000	148,831	96,198	163,000
Minimum measured discharge for that year.		18,947	31,360	27,751	22,539

Notes.—* These figures represent the sum of the daily discharges per second of the river. To arrive at the total discharge, the total should be multiplied by 86,400.

The minimum quantity of silt in suspension observed at Sukkur was 149.92 grains per cubic foot of water at 4' below surface on 17th January 1906, the minimum observed in the previous year being 199.76 grains. Silt Experiments

The maximum quantity observed was 1697.5 grains per cubic foot of water on the 19th July 1905 at 19 feet below surface, the maximum observed in the previous year being 2397.12 grains.

The work of construction of velocity curves at varying depths was continued and curves have been established for both Kotri and Sukkur. It is hoped during the current year to publish the results of all observations recorded. Scientific Work Generally.

Cost of the works sanctioned in each District under these classifications is given below:— Extensions and Improvements and Special Repairs.

<i>Right Bank Division.</i>		Extensions and Improvements.	Special Repairs.
		Rs.	Rs.
Begari Canals District	...	5,635	3,73,139
Shikarpur ditto	...	9,665	1,15,279
Ghar ditto	...	986	13,230
Western Nara District	...	2,992	5,483
Karachi Canals District	...	125,860	81,483
<i>Left Bank Division.</i>			
Fuleli Canals District	...		5,563
<i>Indus River Commission.</i>			
Works under the direct control of the Indus River Commission.		1,397
Total		46,535	5,94,177

The total expenditure under this head on the several works under the direct control of the Indus River Commission was Rs. 6,624, of which Rs. 1,281 were expended on River Gauge Establishment at Sukkur, Kotri and Jerruck. Maintenance and Repairs.

Deposits—Excluded
Local Fund Repairs.

The annual snagging tour was undertaken by Mr. J. Bayliss, Deputy Conservator and Registrar, River Indus, from 19th November 1905 to 16th January 1906 in the S. S. "Fatteh Mubarak". The conservancy was carried out from Keti Bunder to Kashmir and back and in all 41 snags were removed, a larger number than usual, mostly by capstan and engine power; dynamite had to be used in some cases and 74 lbs. were used.

The following is the summary of the expenditure of the year:—

	Rs.
Works	28,476
Repairs	6,624
Establishment	33,268
Tools and Plant	1,94,074

Deposit contribution—Excluded Local Fund.

Repairs	1,940
Establishment	9,600

General.

The inundation was an excellent one. Erosion was active at some of the canals, particularly the Dád and the Western Nára. The Dád Feeder, constructed in the previous year, was blocked with silt, while the Western Nára Feeder was itself eroded. The Dád was, however, saved by obtaining back-water from a Dhund, while the Western Nára had an excellent supply. During the year a new mouth to the Dád, taking off last year's river-course, which is now a flowing Dhund, was excavated.

Erosion was again active in the Shikárpur Canals District, but as the river showed signs of change, no loops were constructed. Owing to erosion in the Karáchi Canals District, two new loops were required.

Very heavy erosion has taken place in the Ghar and Western Nára Districts, but as no bunds have been seriously threatened, it has not been necessary to construct any loops.

A start was made with the new Gaunspur Loop, constructed in view of the necessity of placing the new regulator of the Begári Canal further from the river.

The new dredge was received from England during the year and was partly put together.

List of the Surveys made by the Indus River Commission Staff during the Season 1905-06.

No.	Situation.	Length in miles
<i>Begári Canals District.</i>		
1	River opposite Kashmir Bund, miles 36 to 42	7½
2	Do. do. 0 to 7	11½
<i>Sukkur-Begári Bund District.</i>		
1	River opposite Sukkur-Begári Bund, miles 29 to 33	5½
2	Do. do. 9 to 20	10½
3	Do. do. 0 to 9	12
4	Do. Sukkur	4
<i>Ghar Canals District.</i>		
1	River from Madeji to Akil	40
2	Survey of Baghar Dhand	18
<i>Western Nára District.</i>		
1	River opposite Fatehpur Bund, miles 40½ to 68½	28
<i>Northern Hyderabad and Western Nára Districts.</i>		
1	Survey from Nurpur to mouth of Naulakhiwah	18
2	Do. mouth of Naulakhiwah to Purano Dero	69
3	Do. Naulakhiwah to Mabhat Belo Dhund	26
4	Do. Naulakhi Bhorti Bund	13
5	Do. Dád Dhund	14
<i>Central Hyderabad Canals District.</i>		
1	Survey from Nurpur to Rajri	18
2	Do. Thati to Belo Mad.	11
<i>Karáchi Canals District.</i>		
	River opposite Bhiman Bund	2½
	Do. Ochito and Mulchand Shahbunder Bund	9
	Do. Gulal and Munarki Bund	10
	Do. Khanto Bund	2
	Total	329
	Hydrographic Survey at Kotri	35
	Total length of Survey	364

Irrigation Revenue.

The revenue credited to this head falls under two categories, *viz.*—(1) the direct receipts of the Irrigation Department, and (2) the irrigation share of the land revenue assessed with reference to the supply of water from canals, tanks, dams, and other sources created or maintained by the Public Works Department. The works are also divided into three classes; the first includes entirely new works and works restored or extensively improved for which capital and revenue accounts are kept; the second includes old works which are maintained by the Department and for which only revenue accounts are kept; and the third includes agricultural works for which neither capital nor revenue accounts are kept. The direct receipts on account of works for which capital and revenue accounts are kept were as follows:—

<i>Half Imperial and half Provincial.</i>				
(1) Productive Public Works—				Rs.
(a) Sind	8,24,000
(b) Deccan and Gujarát	5,04,790
(2) Protective Public Works—				
(a) Deccan and Gujarát	1,92,757
(3) Minor Irrigation Works—				
(a) Sind	83,707
(b) Deccan and Gujarát	1,43,963
			Total	12,49,217

The corresponding receipts for 1904-1905 were Rs. 11,35,276. The irrigation share of land revenue on account of works for which capital and revenue accounts are kept was as follows:—

<i>Imperial.</i>				
(1) Productive Public Works—				Rs.
(a) Sind	26,42,753
(b) Deccan and Gujarát	4,081
(2) Minor Irrigation Works—				
(a) Sind	15,60,648
(b) Deccan and Gujarát	5,249
			Total	42,12,631

The following table shows the financial position at the close of the year of irrigation works of all classes for which capital and revenue accounts are kept:—

	Capital outlay in the year.	Capital outlay up to the end of the year.	Working expenses during the year.	Net revenue during the year, direct and indirect.
	Rs.	Rs.	Rs.	Rs.
Productive Works	1,35,447	3,69,23,335	11,86,199	22,89,375
Protective Works	2,85,494	1,03,45,645	96,375	96,382
Minor Works and Navigation	4,25,639	1,38,62,403	5,33,118	12,60,449
Total	9,06,580	6,11,31,383	18,15,692	36,46,206

The revenue and expenditure on account of works for which only revenue accounts are kept were as follows:—

	Works in Sind.	Works in the Deccan and Gujarát.	Total.
	Rs.	Rs.	Rs.
Gross Revenue	65,552	10,445	75,997
{ Direct
{ Indirect	26,91,066	3,60,566	30,51,632
Total	27,56,618	3,71,011	31,27,629
Working Expenses	8,99,203	4,46,116	13,45,319
Net Revenue	18,57,415	—75,105	17,82,310

The revenue and expenditure in respect of the works for which neither capital nor revenue accounts are kept were as follows:—

	Works in Sind.	Works in the Deccan and Gujarát.	Total.
	Rs.	Rs.	Rs.
Gross Revenue	7,787	3,423	11,210
{ Direct
{ Indirect	9,81,186	9,81,186
Total	9,88,973	3,423	9,92,396
Working Expenses	11,53,423	97,398	12,50,826
Net Revenue	—1,64,455	—93,975	—2,58,430

* Storage available after deducting 808 million cub. ft. not used on account of the Poona water-supply.

† An additional storage of 182 million cubic feet was obtained by raising the weir temporarily, water level being maintained at 1'69 feet above crest of the present weir.

‡ Temporarily raised by 1'09 feet.

§ Right bank, 1'12 channel, constructed by this Department in 1901-1902. Left bank, 1'56 Irrigation Channel.

(a) Figures given in Statement I-A.

(b) Above lowest foundations.

(c) Above lowest point in river-bed.

(d) No provision exists in the sanctioned estimate. These figures represent calculated interest to end of 1905-1906 as per Administrative Accounts.

A.
Bombay Presidency, excluding Sind, for 1905-1906.

(c) Estimated rainfall in the catchment.
 (d) Information supplied in Statement I-A, the tank only being a feeder.
 (e) The tank supplies the Palkhed, Oar Tambat and Wadhli Canals and their distributaries as noted in Statement I-A.
 (f) Exclusive of 29 miles of Gondavali Canal.
 (g) Includes 28 1/2 miles of branch canals.
 (h) 0 95 miles of Khatpat distributary added.
 (i) Not yet constructed.
 (j) Includes 9 miles of branch canals.
 A. Figures given in Statement I-A.

(a) Excluding Irrigation share of consolidated assessments.

(b) Correct balances as per Canal Returns rendered by Civil and Public Works Departments.

(c) Amount twice deducted, once in Canal Return for 1903-04 and again in 1904-05, hence now added.

(d) Inclusive of assessments shown in Canal Return No. IX.

V. C. FRENCH,

Offg. Examiner, Public Works Accounts, Bombay.

IV—C.

Statement showing the Financial Results of Irrigation Works in Deccan and Gujarat for the year ended 1905-1906, based on the Assessment of the year.

Principal Results and Operations for the year ended 31st March 1906.

Irrigation Works.	Capital Outlay (direct and indirect) to end of year.	REVENUE ASSESSED DURING THE YEAR.										Working Expenses, direct and indirect.	Net Assessed Revenue of the year.	Percentage on Capital Outlay to end of year.

* Area under consolidated assessment.

† Water in the Tank has been offered free for non-perennial crops as per Government Resolution No. W. L.-1930, dated 2nd July 1930, for 5 years from October 1930.

‡ This work was not included in the corresponding statement for the last year and hence no rainfall was given. The rainfall in that year was 8.61.

Lilt irrigation.

As there was no irrigation outside blocks in the kharif season, no demand statement was sent for that season. All kharif crops inside blocks have been assessed in the rabi return.

I-F.

Statement showing Water-rates per acre in force during 1905-1906 on Irrigation Works in the Bombay Presidency, excluding Sind.

Table with columns: No., Name of Work, Irrigation in blocks, Water-rates (Classes I-V), Single watering, Occupier's Rate, Owner's Rate, Water advantage, Remarks.

Note.—1—For lift irrigation half the ordinary rates are charged. 2—Double the ordinary rates are charged as penal rates for taking water without permission. 3—Leakage or percolation rates are the same as ordinary rates.

STATEMENT G.

Statement showing Areas and Water-rate Assessments during 1905-1906 according to the system of Classification adopted in fixing the Scale of Water-rates.

No.	Name of Work.	IRRIGATION BY BLOCKS.		CLASS I.—PERENNIAL.		CLASS II.—6 MONTHS.		CLASS III.—4 MONTHS.		CLASS IIIA.—SUPERIOR RABI CROPS.		CLASS IV.—MONSOON DRY.		CLASS V.—SPECIAL HOT WEATHER.		MISCELLANEOUS.		GRAND TOTAL.

Note.—The difference between the figures of total area and assessments in this statement and those in Statements I—E to IV—E is due to difference in treatment of tracts in some cases, and in others to the fact that the figures in this statement are more or less hypothetical and are arrived at on the assumption that certain areas are assessed at certain rates.

* This includes 85 acres of perennial for which an extra rate of Rs. 3 was charged under Superintending Engineer, Central Division's No. 3637 of 6th June 1906.
† All land under consolidated assessment.
‡ Exclusive of 1,513 acres of Marul Bagayot area on Lower Panjhra River Work, but inclusive of 1,265 acres on account of the area of irrigation in blocks on Nira, Shetpat and Bhadavadi which have been assessed over again.
§ Exclusive of Rs. 8,849 on account of enhanced water-rates on old works of the Lower Panjhra River works.

□ The figure for Δ appears unsatisfactory as the canal tails into low ground and there is no measurement of the flow at tail.

* 72 cusecs represent the flow into Mancher Lake.

‡ Black figures against Chario Wahur indicate the number of days on which the canal discharged back into the river.

§ The higher Δ is due to a large quantity of water running to waste into the sea.

† The high rabi Δ is partly accounted for by 114,718 acres of cotton, a kharif crop being watered for a few months in the Rabi season.

STATEMENT II-E.

Statement showing Incidence of Working Expenses on Assessed Revenue on Canals in Sind during the year 1905-1906.

Name of Canals.	Average discharge of the year at Canal Head in Cubic feet per Second.	WATER-RATE ASSESSED, 1905-1906.					Gross Assessed Revenue from all sources.	Working Expenses, Direct and Indirect.	Acres irrigated during the year 1905-1906.	WORKING EXPENSES.			90 PER CENT. OF NET CONSOLIDATED ASSESSMENT.		TOTAL WATER-RATE, DIRECT AND INDIRECT.	
		Occupier's.	Owner's.	Total, Direct.	Indirect.	Total, Direct and Indirect.				Per cent. on Gross Revenue.	Per Acre irrigated.	Per Cubic foot per Second of discharge at Canal Head.	Per Acre irrigated.	Per Cubic foot per Second of discharge at Canal Head.	Per Acre irrigated.	Per Cubic foot per Second of discharge at Canal Head.
