INDEX.

	Pages
General results regarding receipts from, expenditure on and areas irrigated by irrigation works in the Bombay Presidency	i & ii
Details of expenditure	iii
General review of irrigation works in Northern Division	iii & iv
Do. do. in Central Division	v to viii
Do. do. in Southern Division	viii to x
General remarks in connection with the character of inundation in Sind	xi
General review of irrigation works in Indus Right Bank Division	xi to xiii
Do. do. Left Bank Division	xiii to xvi
Work done by the Indus River Commission	xvi to xviii
Summary of Irrigation Revenue	xix
Administrative Accounts, Public Works Department (Irrigation), for the Bombay Presidency	(1) to (128)
Statistical Statements for Irrigation Works, Deccan and Gujarát :—	
Statement I A—Statement showing size, command, length and cost of canals.	2 & 3
Statement II A—Statement showing details of catchment area, storage, command and cost of reservoir projects	4 & 5
Statement I B—Capital Account of Irrigation Works for and to end of 1909-10	6 to 9
Statement I C, showing financial results of irrigation works for the year ending 31st March 1910. Realizations under main heads of revenue and working expenses	10 & 11
Statement II C, showing financial results of irrigation works based on actual receipts	12
Statement III C—Demands and realizations during the year 1909-10	13
Statement IV C, showing the financial results of irrigation works for 1909-10 based on assessments	14
Statement I E, showing areas irrigated and average discharges and duty of water in regard to irrigation works during 1909-10	15 to 17
Statement II E, showing incidence of working expenses and assessed revenue on certain irrigation works during 1909-10	18 & 19
Statement III E, showing quantity and value of crops irrigated during 1909-10	20 to 28
Statement IV E—Comparative statement of irrigation and rainfall for the years 1908-09 and 1909-10	29 to 31
Statement F, showing remissions on irrigation works for the year 1909-10	32
Statement I F, showing water-rates per acre in force during 1909-10	33 & 34
Statement G, showing areas and water-rate assessments during 1909-10 according to the system of classification adopted in fixing the scale of water-rates.	35
Statement H, showing operations of the year 1909-10	36 & 37
Statistical statements for Sind :—	
Statement I A—Statement showing size, command, length and cost of canals.	40 to 43
Statement I B—Capital Account of Irrigation Works for and to end of 1909-10	44 & 45
Statement I C, showing the financial results of irrigation works for the year ended 31st March 1910. Realizations under main heads of revenue and working expenses	46 & 47
Statement II C, showing the financial results of irrigation works for 1909-10 based on actual receipts	48
Statement III C—Demands and realizations during the year 1909-10	49
Statement IV C, showing the financial results of irrigation works for 1909-10 based on assessments	50 & 51
General Abstract of financial results of irrigation works for and up to end of 1909-10	52 to 59
Statement I E, showing areas irrigated and discharges and duty of water in relation to certain works during 1909-10	60 & 61
Statement II E, showing incidence of working expenses and assessed revenue on certain canals during 1909-10	62
Statement III E, showing quantity and value of crops irrigated during 1909-10	63 to 70
Statement IV E—Comparative statement of irrigation and rainfall for the years 1908-09 and 1909-10	71 to 75

ADMINISTRATION REPORT

OF

IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1909-1910.

GENERAL.

The direct and indirect receipts and expenditure of the Irrigation Department during the year were as follows :—

Class of Works.	Direct Receipts.	Indirect Receipts.	Total, Direct and Indirect Receipts.	DIRECT EXPENDITURE.		
				Capital.	Working Expenses.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Major Irrigation Works. { Deccan and Gujarát. ...	10,68,184	4,089	10,72,220	24,43,129	8,09,423	27,52,558
{ Sind ...	1,39,954	25,65,715	27,65,669	1,99,501	9,20,790	11,20,291
Minor Irrigation Works for which Capital and Revenue Accounts are kept. { Deccan and Gujarát. ...	1,76,567	7,961	1,84,528	125,260	87,288	2,12,548
{ Sind ...	72,556	14,97,946	15,70,502	4,493	4,72,239	4,76,732
Total, Deccan and Gujarát ...	12,44,698	12,050	12,56,748	25,68,389	8,96,717	29,65,106
Total, Sind ...	2,72,510	40,63,661	43,36,171	2,03,994	13,93,029	15,97,023
Grand Total, Deccan and Gujarát and Sind ...	15,17,208	40,75,711	55,92,919	27,72,383	17,89,746	45,62,129
Grand Total for 1908-1909 ...	12,87,064	42,04,880	54,91,894	20,16,804	18,08,265	38,25,069

2. The following table gives the areas irrigated by the several canals in 1909-1910, compared with those for the year 1908-09 :—

Names of Canals.	1908-1909.	1909-1910.	Difference.
MAJOR IRRIGATION WORKS.	Acres.	Acres.	Acres.
<i>Deccan and Gujarát.</i>			
Pravara River Works—Ojhar Right Bank Canal	218	+ 218
Chankápur Tank—Girna Left Bank Canal	3,099	+ 3,099
Nira Canal including Shetphal Tank ...	45,533	44,138	- 1,395
Mhasvad Tank ...	10,285	6,658	- 3,627
Háthmati and Khári Cut Canals ...	\$16,900	21,398	+ 4,498
Lower Pánjhra River Works ...	2,165	2,516	+ 351
Kádyá River Works ...	3,474	3,293	- 181
Pravara River Works—Lákh Canal... ..	1,254	691	- 563
Mutha Canal including Mátoba Tank ...	11,740	13,769	+ 2,029
Ekrak Tank ...	5,116	4,643	- 473
Krishna Canal ...	5,190	5,362	+ 172
Total, Deccan and Gujarát ...	\$101,657	105,785	+ 4,128
<i>Sind.</i>			
Desert Canal ...	191,122	181,491	- 9,631
Unharwah ...	85,273	84,529	- 744
Begári Canal ...	324,267	282,544	- 41,723
Eastern Nára Works ...	286,895	219,447	- 67,448
Jámrao Canal ...	207,935	179,937	- 27,998
Dád Canal ...	119,690	113,957	- 5,733
Naolákhí ...	55,452	49,000	- 6,452
Nasrat ...	124,111	87,832	- 36,279
Mahiwáh ...	99,426	85,031	- 14,395
Total, Sind ...	1,494,171	1,283,768	- 210,403
Total, Major Works ...	1,595,828	1,389,553	- 206,275

§ The difference between this figure and the figure in the Administration Report for 1908-1909 is due to the inclusion of the area irrigated by the Khári Cut Canal which was shown under Minor Works in the Report for 1908-1909.

Names of Canals.	1908-1909.	1909-1910.	Difference.
	Acres.	Acres.	Acres.
MINOR IRRIGATION WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE KEPT.

Total, Irrigation Minor Works for which Capital and Revenue Accounts are kept ...	1,082,260	1,024,706	-57,554
Total, Irrigation Major and Minor Works for which Capital and Revenue Accounts are kept...	2,678,088	2,414,259	-263,829

3. The above table does not include works for which only Revenue Accounts are kept or "Agricultural Works"; including these, the total area irrigated in Sind was 3,304,092 acres. Details will be found in Statement IV—E.

* Area on which consolidated assessment is levied.

† Consolidated assessment levied on 837 acres only.

§ The difference between this figure and the figure in the Administration Report for 1908-09 is due to the omission of the area irrigated by the Khári Cut Canal which, in this Report, has been shown under Major Works, owing to its amalgamation with the Háthmati Canal.

2. The expenditure was distributed under different heads as under :—

Heads.				Amount.	Remarks.
<i>Capital—</i>					
Major Works—				Rs.	
Protective Works	(a) 23,71,108	
Productive Works	(b) 1,99,352	
Minor Works and Navigation—					
Works for which Capital and Revenue Accounts are kept				25,70,480	Imperial.
<i>Revenue—</i>					
Major Works—					
Protective Works	68,071	
Productive Works	9,61,857	
Minor Works and Navigation—					
Works for which Capital and Revenue Accounts are kept				10,49,428	Go. do.
Works for which only Revenue Accounts are kept				14,56,613	Do. do.
<i>Agricultural Works—</i>					
Works for which neither Capital nor Revenue Accounts are kept.				18,83,907	
Contribution Works				39,321	
<i>Construction of Protective Works—</i>					
Works for which neither Capital nor Revenue Accounts are kept.				18,75,228	Deposits contributions.
Famine Relief Outlay on Irrigation Works				1,26,986	Imperial.
Grand Total				72,78,489	

(a) Inclusive of expenditure in England ... Rs. 1,08,732

(b) Do. do. ... " 857

3. The total is classified as under :—

	Deccan and Gujarat.		Sind.	Total.
	Rs.	Rs.	Rs.	Rs.
Works	22,90,908	3,68,899		26,59,807
Repairs	4,38,268	24,50,678		28,88,946
Establishment	6,49,707	8,97,634		15,47,341
Tools and Plant	1,05,613	55,968		1,61,586
Refunds of Revenue	1,583		1,583
Suspense Account	48,670	—24,020		24,590
Receipts on Capital Accounts	—364		—364
Total	35,29,380	37,49,159		72,78,489

DECCAN AND GUJARAT.

NORTHERN DIVISION.

During the year, the accounts of both the canals were amalgamated with effect from Hâthmati and 1st April 1909, and the combined project has been classed under "49" Irrigation Major Khâri Cut Canals. Works, under the orders of the Government of India.

The rainfall gauged at Ahmedabad and Parântij was 31.33 and 40.33 inches, respectively, against an average of 29.29 and 31.00 inches for the past 30 years including that under report. There was a sufficient supply throughout the monsoon in the Hâthmati River for this small canal up to the 15th October. At the end of the rabi season, *i. e.*, 15th February 1910, the discharge fell to 48 cusecs and it then gradually diminished and was only 16 cusecs on the 30th April 1910. Heavy rain fell in the catchment of the Hâthmati River on the 2nd August 1909 (7" at Ahmednagar and 10" at Bhiloda in 14 hours), and there was a large flood in the river, the water rose to 12.5 feet above the weir crest.

The Sâharmati River was also in flood about the same time, but no appreciable damage was caused except in a few places in the Dholka Taluka where an overflow occurred and breached the bunds of some tanks. There were also two large floods in the Khâri River, one on the 27th and the other on the 3rd August, the depth of water being 5.25 and 10.50 feet respectively over the weir crest at Raipur.

The Chandola Tank which is a small regulating tank in the Khâri Cut system supplied from the Raipur Weir on the Khâri River was filled on the 30th July 1909, again on the 5th September, and for the third time partially on the 9th December 1909.

The Bokh Reservoir was filled to F.S. L. on the 21st September 1909 and the storage was fully utilized.

The area irrigated and the gross assessed revenue, as compared with the average of the previous 10 years, are shown in the following table:—

Name of the Canal.	1909-1910.		Average of the past 10 years.	
	Area irrigated.	Gross assessed revenue.	Area irrigated.	Gross assessed revenue.
	Acres.	Rs.	Acres.	Rs.
Háthmati Canal	8,866	19,994	2,144	4,977
Khári Cut Canal	12,532	80,091	2,506	18,655

Khári Sluices.

In the Kalambandi villages under the Khári Sluices, the water-supply was abundant both for the kharif and rabi crops. The small Goblañ and Bherai tanks constructed to protect a portion of good rice land filled and about 400 acres were irrigated over and above the area which bears the consolidated assessment including the Himayat water rate.

New tanks in the Kaira Collectorate.

The area irrigated and the gross assessment on the Tranja-Nagrama, Wangroli and Savli Tanks, as compared with the previous year, are as shown below:—

Name of the Tank.	1909-1910.		1908-1909.	
	Area irrigated.	Gross assessed revenue.	Area irrigated.	Gross assessed revenue.
	Acres.	Rs.	Acres.	Rs.
Tranja-Nagrama	330	242	853
Wangroli	438	1,230	1,921	5,842
Savli	1,569	4,790	1,400	4,851

There was no irrigation under the Tranja-Nagrama tanks as there was no water at all in them. The Wangroli Tank was filled partially up to R. L. 95'75, *i. e.*, to 5'25 feet below the F. S. L., the rainfall in that neighbourhood being less than in the previous year. The whole area commanded by the Right and Left Bank Canals is very limited, and the storage cannot therefore be utilized even in years of scanty rainfall. With a view therefore to bring more land under command a project for extending the Right Bank Canal downwards, where there is good rice land available for irrigation, has been submitted for sanction. The Savli Tank was brought into operation in 1908-1909. The highest level reached by the water in the tank was 6 feet below the F. S. L. The rainfall was fitful and less than in the previous year. The dam and the canals were completed and the construction estimate was closed on the 31st March 1910.

The Saiat Tank.

The Saiat Tank was in progress. The dam and the canals have been completed and will be brought into operation during the year 1910-1911, the expenditure being Rs. 50,669.

The Muwalia Tank.

The Muwalia Tank was filled. The area irrigated was 51 acres in the kharif and 198 acres in the rabi season. Rs. 4,724 were spent on extending the Left Bank Canal and providing irrigation pipe-outlets on the Right and Left Bank Canals, and Rs. 3,977 on special repairs. The dam and the canals were maintained in good condition at a cost of Rs. 2,500.

Old Tanks.

Improvements to 20 and repairs to 60 small irrigation tanks in the Gujarát Irrigation District and repairs to 41 in the Surat and Broach District were executed at a total cost of Rs. 28,800 and Rs. 65,645, respectively, on improvements and repairs.

Boring operations.

Government having ordered experiments to be made in deep well boring in Gujarát, a site was selected in the Irrigation Store compound at Sánand and boring commenced on 1st September 1909; when a depth of 30½ feet was reached on 22nd February 1910, water rose to within 23 feet of the ground surface. Another boring was then commenced at Dholka, the total expenditure being Rs. 17,598.

Drainage channels.

Only one original work of this class, *viz.*, the Checkla Drainage Channel was completed, the expenditure during the year being Rs. 129. All the old drainage channels in the Surat and Broach and Gujarát Irrigation Districts worked satisfactorily and were maintained at a cost of Rs. 8,634 and Rs. 6,029, respectively, but in some cases, in the latter district, there was no flow at all in them owing to the scantiness of the rainfall.

CENTRAL DIVISION.

(a) *Nature and scope of any large works which have been undertaken or were in progress during the year.*

Násik and Ahmednagar Irrigation District.

On the Girna River the Chankapur storage works and the Girna Left Bank Canal which they are to serve are approaching completion. The storage is obtained by a masonry dam across the river and earthen embankments closing low saddles on either flank. The dam is provided with a set of undersluices at a low level. The stoney gates for these undersluices were temporarily erected for the rabi season and 65 feet depth of water was stored and issued for rabi to the completed Girna Left Bank Canal. The masonry during the year was completed to the full height of the dam and the sluices permanently fixed. The passage of floods is provided for by two waste weirs, one on each side of the river, where the height of the masonry dam is low. They are to be fitted with automatic gates and the side frames of 67 of these were fixed. The Girna Left Bank Canal, including the weir or head-work across the river, was completed and opened for rabi irrigation.

At the Wághad Tank, for the Kadwa River Canals, the new waste weir and automatic gates were for the first time utilised for extra storage and 566·10 million cubic feet of water were available for irrigation.

Godáveri Canals.

The Godáveri Canal Project, estimated to cost Rs. 95,61,044 including indirect charges, was sanctioned by the Secretary of State for India during 1906-1907 and work was commenced in February 1907. The project consists of—

- (1) A storage reservoir on the River Darna near Iगतपुरी in the Násik District.
- (2) Head Works, comprising a pick-up-weir with head regulators and scouring sluices and protecting embankments on either bank of the River Godáveri at Nandur-Madhmeshwar near Niphád in the Násik Collectorate.
- (3) Godáveri Right and Left Bank Canals, 72 and 50 miles in length respectively, with a gross command of 239,698 acres lying in the Násik and Ahmednagar Collectorates.

The canals have been put in charge of the newly-formed Pravara Canals District since January 1910 and the Reservoir and Head-works are under the Godáveri Irrigation District.

By the end of the season the level of the major portion of the Darna Dam was over R. L. 1,838 or only 29 feet below waste weir sill level. The undersluices and the two turbine sluices with the 30" pipe were erected. The pavement of the waste weir was also laid between chainages 500 and 1,000 or for half its length.

The masonry of the pick-up-weir at Nandur-Madhmeshwar was practically completed with the exception of the length lying between chainages 4,900 and 5,200, where unsatisfactory foundations had been met with. This portion was completely founded by the 3rd of February 1910, and the masonry was then pushed on vigorously so as to complete the whole weir before the break of the monsoon. The height to be built here was from 40 to 45 feet, with a 12 feet head wall above that again, the latter being necessary to prevent floods from passing over this part of the weir. The masonry of the head regulators of the canals was almost completed, while the Right Flank Embankment was finished, that on the Left Bank being pushed on with vigorously to ensure its completion before the rains.

The acquisition of land in the area submerged in the basin of the weir was almost completed, while work in connection with the new sites for the villages which will be submerged, such as levelling and well sinking, was in progress. The combined expenditure of the year on the Darna Dam and the weir was Rs. 11,30,390.

The earth-work of the Godáveri Right Bank Canal was in progress in the first 62 miles, as well as the masonry works. Owing to a favourable season, labour was difficult to obtain but the general progress made was satisfactory.

The construction of the distributaries for the canal was not actually started, but their survey up to the 61st mile was completed, and detailed plans and estimates for the first 27 miles were prepared.

As it was proposed to open the first 27 miles of the canal during the monsoon of 1910, every effort was made to complete this length in spite of the labour difficulty. Labour had to be imported for this purpose.

The canal telegraph line, which had been constructed from the Head Works at Khangaon along the Right Bank Canal to Chitali Station on the Dhond-Manmad Railway, was opened during the year and found most useful.

Earth-work on the Godáveri Left Bank Canal was in progress up to the 40th mile, gaps being left for the masonry works, etc., where necessary. Masonry works were also started in the first 10 miles.

Pravara Canals.

The main features of this project, as sanctioned by the Secretary of State for India in 1907, are the construction of a masonry dam, 250 feet in height, on the Pravara River at Bhandardara, situated in the gháts of the Ahmednagar Collectorate; the raising of the existing low weir at Ojhar on the same river and providing sluices in it for the Right Bank Canal; and the widening and extension of the old Left Bank Canal at present fed by this weir; also the completion of the Right Bank Canal constructed originally as a famine work. The estimated cost of this project is Rs. 86,44,841 including indirect charges, while the canals are designed to irrigate an area of 49,440 acres.

The dam itself and the subsidiary works connected therewith, such as service roads, a 1st class bungalow and quarters for the establishment, were in charge of the Executive Engineer, Násik and Ahmednagar Irrigation District during the year, the expenditure incurred thereon being Rs. 52,942.

The masonry works in connection with the Ojhar Right Bank Canal, commenced in 1908-1909, were in progress under the Executive Engineer, Ahmednagar District. They were transferred to a new executive charge, called the Pravara Canals District, formed on the 4th January 1910 with its head-quarters at Kopargaon for the construction of the canals of both the Godáveri and Pravara Projects.

The cross drainage works in connection with the Ojhar Right Bank Canal were completed up to the 27th mile. The survey for the distributary system under this canal was started.

Water was admitted into the canal and issued for monsoon irrigation only in the first 6 miles, irrigating an area of 218 acres during the year.

Preliminary work for the widening and extension of the Ojhar Left Bank Canal was started.

The expenditure since the formation of this district was Rs. 2,03,775.

Poona Irrigation District.

The work of lining with mortar a portion of the Mutha Right Bank Canal above the City of Poona was in progress, a length of 700 feet being completed at an expenditure of Rs. 17,845. The canal here, at the same time, is being widened so as to give it a capacity of 1,000 cusecs with a full supply depth of 10 feet. The bed and sides are being lined with stone and mortar to reduce the percolation into the City. As the canal cannot be closed except for short periods of 4 days at a time, this work is being carried out in lengths of 500 feet, the flow being diverted through a corrugated iron flume of the same length, which is placed in a cut made alongside and above the canal. Experiments made to ascertain the amount of leakage in a length of about 500 feet before and after lining show that the lining reduced the leakage from about 7·2 to 1·8 cusecs per million square feet of wetted surface. The amount of the sanctioned estimate is Rs. 1,00,002.

The following works in connection with the Poona Cantonment Water Supply, undertaken during the previous year, were completed during the year under report:—

Work.	Expenditure during the year.	Total Expenditure on the work.
	Rs.	Rs.
(1) Providing a complete set of steam pumping machinery.	9,573	71,072
(2) Removing and replacing the mains to the Yeravda Central Prison.	5,178	43,553
(3) Enlarging the Bhamburda water-supply main ...	10,604	32,454

The construction of an overbridge across the Mutha Right Bank Canal near Parvatí was in progress, the expenditure being Rs. 1,670.

Sholápur District.

The construction of the Pathri Tank Channel and distributaries was almost completed. The length of channel completed is 4 miles and 33 chains,—of distributary No. 1, 60 chains—and of No. 2, 2 miles and 10 chains.

The Wadshivne Tank Channel was in operation during the year, while a project for completing the Right Bank distributary has been sanctioned.

Special Duty Irrigation Surveys.

During the year detailed surveys and estimates for the Nira Right Bank Canal Project from miles 20 to the end of mile 110 were prepared and submitted to Government. The design and estimates for raising the Bhatghar dam and the Vir weir for giving supply to the Nira Right Bank Canal and an additional supply to the Nira Left Bank Canal were also completed. The maps and plans to accompany the final report on the survey for Protective Irrigation Projects in the Deccan were prepared and printed under the supervision of the Executive Engineer, Special Duty Irrigation Surveys.

Second Class Irrigation Works.

On repairs and extensions and improvements to the Second Class Irrigation Works situated in the Násik and Ahmednagar Irrigation District, a sum of Rs. 34,922 was expended, while in the West Khándesh District, the expenditure was Rs. 6,460 and in the East Khándesh District Rs. 4,671.

Areas of Irrigation and Revenue.

The following table shows the areas irrigated under, and the gross assessed revenue derived from, the irrigation works in operation in 1909-1910, as compared with the average of the last 10 years:—

Names of Works.	1909-1910.		Average of past 10 years.		
	Area irrigated.	Gross assessed revenue.	Area irrigated.	Gross assessed revenue.	
	Acres.	Rs.	Acres.	Rs.

Grand Total	141,024	10,61,521	128,819	9,22,150	

* Average of four years.

† Irrigation Share only.

This table shows that, excluding the figures for Second Class Irrigation Works, the area irrigated and the gross assessed revenue during the year are in excess of the mean of the past 10 years by 11,776 acres and Rs. 1,42,392 respectively. The increases are partly accounted for by the introduction of irrigation for the first time under the Ojhar Right Bank and the Girna Left Bank Canals, and partly by extended irrigation under the Nira and Mutha Canals and the Ashti Tank. The other works show small increases or decreases which are accounted for by the cultivators' demand for water and the extent of the supply in the several tanks.

The increase in area under the Nira Canal was due to more monsoon crops being irrigated than usual. On the Mutha Canal the increase was entirely due to the special arrangements made for sending a larger discharge down the Mutha Right Bank Canal by temporarily lifting the Poncelet wheel at Poona, which made it possible to supply water to a much larger area of monsoon crops under the Matoba Tank and at the tail of the canal.

(b) Important events which have occurred concerning works.

No events of much importance occurred during the year. The rainfall was generally sufficient and timely, while there were no extraordinary floods. The Ekruk Tank overflowed for the first time for 5 years and the Mhaswad Tank was filled during June, an unusually early date.

(c) Engineering questions, etc., which have arisen.

The clearing and deepening of the nalla near Pandhara on the Nira Canal, carried out during the previous year, resulted in a marked improvement of the lands on its banks which were affected by salt efflorescence. Some of the fields which were formerly altogether useless for cultivation of any kind have now become quite culturable.

The work of providing an experimental pumping station for utilising the sub-soil water for irrigation in the village of Hol under the Nira Canal was in progress during the year, the expenditure incurred being Rs. 3,462. The engine and pump were purchased and erected temporarily on a wooden platform and the channel for leading water from the pump to the fields to be irrigated was partially completed. The excavation for the pond was carried down to hard murum.

At the end of the rainy season, a temporary wall 2 feet in height was built on the top of the Vir weir at a cost of Rs. 1,319 and an extra storage of about 106 M. cft., yielding a revenue of about Rs. 3,710, was thus secured.

(d) Surveys, etc.

The work of constructing field embankments at the village of Chandnapuri in the Sangamner Taluka of the Ahmednagar Collectorate was continued. This work was an experiment to test the usefulness of the terracing and field embankment proposals, for which estimates on a large scale have been prepared for famine purposes.

Gauging of the rivers in the Deccan and Gujarat, commenced by the Superintending Engineer on Special Duty and transferred to the respective Executive Engineers of the Districts through which the rivers flow, were continued and the discharges calculated in the office of the Superintending Engineer, Central Division.

(e) Results of new administrative measures affecting the Department which have been tried.

The block system of irrigation continued to work satisfactorily on the Nira Canal. The experiment regarding distribution of water by time and measurement, started two years ago on Distributary No. 29 of the canal, was continued during the year.

The telegraph line on this canal continued to prove of great help in the efficient working of the canal.

A Kennedy's gauge outlet, with a capacity of 2 cusecs, was fixed on the Mutha Left Bank Canal, but the fluctuations in the level of the water being large, it did not work well. It will be removed and re-erected at a more suitable place.

Two Grant Mitchell meters, with a capacity of 350 cubic feet per minute, were erected on the Nira Canal for trial purposes, but sufficient observations could not be made during the year to enable definite conclusions to be arrived at.

SOUTHERN DIVISION.

The area under irrigation and gross assessed revenue on all the First Class Irrigation Works in the Southern Division are shown below in two statements; in the first, they are detailed by works, and in the second, by Districts. The figures of the past year are compared with those of the average of the previous ten years:—

AREAS OF IRRIGATION AND REVENUE.

Statement I.—Individual Works.

Name of Work.	1909-1910.		Average of previous 10 years.		Area under consolidated assessment.
	Area irrigated.	Assessed revenue.	Area irrigated.	Assessed revenue.	
	Acres.	Rs.	Acres.	Rs.	
<i>Major Works.</i>					
Krishna Canal	5,362	53,213	6,667	44,610	
<i>Minor Works.</i>					
Rewári Canal	1,125	4,675	664	3,392	
Upper Mán River Works	686	2,569	844	2,873	
Yerla River Irrigation Works	3,684	14,703	3,082	9,977	
Chikhli Canal	813	1,655	293	1,403	
Maini Tank Canal	1,615	6,774	1,466	6,017	
Muchkundi Tank	2	49	406	
Gadikeri Tank (a)	377	1,987	1,345	1,987	(a) Only 337 acres are under consolidated assessment.
Dambal Tank (b)	322	1,475	358	1,869	(b) Includes area under consolidated assessment.
Medleri Tank	119	909	106	679	
Madag Tank	661	2,863	863	2,420	
Asundi Tank (b)	331	1,234	314	1,341	
Mavinkop Tank (c)	585	2,203	556	2,004	(c) Area under consolidated assessment.
Gokak Canal, 1st Section, and Storage Works	8,507	37,137	9,968	32,202	
Total	18,327	77,734	18,903	65,570	
Grand Total	23,689	1,29,947	25,570	1,10,180	

Statement II.—Districts.

Name of District.	Area irrigated.	Assessed revenue.	Average of previous 10 years.	Area under consolidated assessment.
	Acres.	Rs.	Acres.	Rs.
Belgaum	8,884	39,124	10,313	34,189
Dhárwár Irrigation	2,018	8,234	2,202	8,313
Śátára	12,785	82,589	13,006	67,272
Bijápúr	2	49	406
Total	23,689	1,29,947	25,570	1,10,180

Although the total area irrigated was less than that of the previous year by 790 acres, the assessed revenue was about equal to that of the previous year. This was due to more demand for water for high-rated crops during the rábi season. The same reason explains the decrease in the area and increase in the assessed revenue by 1,881 acres and Rs. 19,767, as compared with the figures showing the average of the previous ten years.

Remarks on Individual Works.

With a view to store sufficient water for rábi irrigation, the permanent weir was temporarily raised to a height of 2.50 feet at an expenditure of Rs. 1,557, and thus held an additional storage of 384 million cubic feet. This raising answered its purpose satisfactorily and proved a profitable work. Gokak Canal.

Owing to the non-occurrence of hot-weather thunder-storms on the catchment area, the supply of water in the tank fell short of requirements on the 24th April 1909, and the deficiency continued till the 26th May 1909.

The tank began to fill from the 27th May 1909, and to overflow on the 28th June 1909. The maximum flood of the year occurred on the morning of the 15th July 1909, when the water level rose to 3.56 feet above the permanent weir crest (R. L. 2003.00). This flood is estimated at 70,552 cubic feet per second, which is equal to a run-off of 0.10 inch per hour from the catchment of 1,030 square miles.

The main river under-slucices were finally closed on the 5th November 1909, and the storage was first drawn upon on the 21st December 1909.

Experiments to ascertain the saturation of high embankments were carried out and the results recorded in the Dhárwár Irrigation and Śátára Districts.

Second Class Tanks.

The expenditure on repairs to Second Class Tanks as compared with the average of the previous ten years was as follows :—

District.	1909-1910.		Average of previous 10 years.		Remarks.
	Number of tanks repaired.	Cost.	Number of tanks repaired.	Cost.	
Belgaum	42	Rs. 13,872	40	Rs. 22,567	
Dhárwár Irrigation	170	79,182	87	71,870	
Ratnágiri	2	132	2	399	
Bijápúr	2	1,445	
Sátára	76	48	
Kánara	76	68	
Total	214	93,186	131	96,382	

The area under irrigation and the irrigation share (four-fifths) of the assessed consolidated revenue of the year compared with the averages of the previous ten years were as follows :—

District.	1909-1910.		Average of previous ten years.		Remarks.
	Area irrigated.	Assessed irrigation revenue.	Area irrigated.	Assessed irrigation revenue.	
Belgaum	Acres. 9,910	Rs. 33,049	Acres. 9,910	Rs. 33,049	
Dhárwár Irrigation	62,013	1,70,470	55,773	1,69,869	
Ratnágiri	1,196	3,144	1,088	2,799	
Bijápúr	1,353	5,564	1,438	5,496	
Sátára	105	660	107	669	
Kánara	585	2,208	112	464	
Total	75,182	2,15,090	68,423	2,12,326	

Tank at Shedbál.

This work, which was in progress during the previous year, was completed at a cost of Rs. 2,859, the total expenditure being Rs. 63,386 against the sanctioned estimate of Rs. 65,056.

The gap left as a temporary waste weir was completely filled, and water was stored early in June 1909 to a height of 18 feet. As the owners of land to be irrigated had not prepared their fields for irrigation, the water was not used except for drinking purposes by the people and their cattle. The tank has been handed over to the villagers to regulate and distribute the water-supply when available.

Dharma Canal Improvements.

This work, which was sanctioned in Government Resolution No. W. I-2405, dated 12th October 1909, and was estimated to cost Rs. 88,912, was commenced in the month of January 1910, and the expenditure on it to end of March 1910, was as under :—

				Rs.	a.	p.
1. Works	3,844	12	2
2. Establishment	530	0	6
3. Tools and Plant	44	2	9
Total	3,918	15	5

Irrigation Rest Houses.

The Irrigation Rest Houses, one at Honkan, Táluka Hangal, and the other at Lakkikop, Táluka Bankápúr, both in the Dhárwár Irrigation District, were completed for Rs. 5,178 and Rs. 5,177, the expenditure during the year under report being Rs. 1,342 and Rs. 651 respectively. Wells in the compounds of the three Irrigation Rest Houses at Hangal, Honkan and Lakkikop were under construction; the expenditure on them during the year was Rs. 254, Rs. 576 and Rs. 763 respectively.

Residence for the Executive Engineer, Dhárwár Irrigation-Dharma and Naregal Canals.

The building was completed at a total cost of Rs. 15,873.

The Dharma Canal began to flow from the 27th June 1909, but there was not much water in it after the 31st October 1909. The crops all along the canal and under the tanks supplied by it, were good. The Naregal Canal is in need of repairs.

35.—Protective Irrigation Works.

Twenty rain and river gauges, transferred to the Belgaum, Sátára and Kánara Districts, were maintained during the year by the respective Executive Engineers.

SIND.

The inundation of 1909 was, on the whole, good, though not so favourable as that of 1908. Character of the Inundation.

The fair irrigating level of 13 feet at Bukkur was first reached on the 28th July, and this level was maintained for the following periods during the inundation:—28th July to 4th August, 23rd August to 13th September, and, for another day, the 17th September, making in all 31 days, as compared with 59 days of the previous year, and, an average of 44 days during the previous 10 years. On the Kotri gauge, the fair irrigating level of 17 feet was first registered on the 24th June, and this level was maintained for the following periods during the season:—24th to 29th June, 8th to 10th July, 13th to 20th July, and 24th July to 24th September, a total of 80 days, as compared with 79 days in 1908, and an average of 46 days during the previous 10 years.

The highest readings for the year were 14.4 feet on the Bukkur gauge, recorded on the 28th August, and 20.8 feet on the Kotri gauge, recorded on the 30th August. The highest readings in 1908 were 16.1 feet and 22.9 feet on the Bukkur and Kotri gauges, respectively.

The rainfall during the year was 5.2" as compared with 9.46" in 1908, and an average of 4.78" during the previous 10 years. The fall in July was of some benefit to cultivation.

INDUS RIGHT BANK DIVISION.

The canal was opened on the 1st June 1909, and worked satisfactorily. A revised estimate for improving the distribution, and giving greater facilities for communication was sanctioned during the year. The masonry outlets, that were under construction in the previous year, were completed during the year under report. Mahiwañ.

As the heavy Ghotki floods of the inundation of 1908 crossed the Nára Supply Channel at several places, between miles 7 and 12, the banks were raised 2 feet above the high flood level of 1908 and strengthened. The work was commenced during 1908-1909 and completed during the year at a total cost of Rs. 21,302. Nára Supply Channel.

The canal was opened on the 1st June 1909, and for the year under report experienced a really good season, and had a sufficient supply until the river fell, suddenly, in September. The tail of the main canal received a much better supply than in former years, owing to its clearance in the cold weather. All branches, and the Uch Rajwah especially, worked exceedingly well. A modified form of the Chenab pattern sluice was used on the Toj Rajwah and the Fall Rajwah and their branches, for the first time, and proved a success. The canal system, on the whole, received a fair rabi supply; but, the sudden fall of the river in the middle of September was responsible for less than the usual rabi area on the branch canals above the 19th and 27th miles. Desert Canal.

This canal was fed direct from the river and received an excellent supply throughout the season; in the Nasir branch only the supply was somewhat deficient. This cannot be remedied until some distributaries are constructed at mile 24. The two distributaries, the Kharirawah ex mile 8/2 and the Hazarawah ex mile 13/1, were opened for the first time. The former is most useful and relieves the Nasir branch and the Main canal of lands which formerly received a poor supply; and, at the same time, brings new land under cultivation. The Hazarawah will be a useful branch. It suffers from passing through bad soil, and, for the greater part of the Abkalani, was running below Full Supply Level owing to constant breaches. Some 10 or 12 sluices of the Chenab pattern were constructed in the Lalloi Dhoro of the Tangwani Branch to replace the large sluices which drew off an excessive supply. These sluices have worked admirably; and, the supply at the tail of the Unhárwah has been considerably improved. Unhárwah.

The Tori Stop Gates at mile 4/4 of the main canal were strengthened owing to the river threatening to erode the 2nd Mile of the Unhárwah and carry away the regulator. The Tori Stop Gates may, at any time, be called upon to hold up the flood. The pavement has, therefore, been strengthened, and the pitching on the downstream side increased.

The canal was opened on the 1st June, and had a splendid supply. On a few occasions the supply was not quite equal to the demand owing to rubbish accumulating in the Head Regulator; such a difficulty is not likely to occur again as the New Head Regulator at mile 6, with horizontal needles, has been completed. The chief point of interest was the working of the new form of Karia heads or sluices constructed from mile 38 to the tail. These sluices were remodelled on the lines approved by Government, with submerged orifices, the size of the vent being fixed in proportion to the area of holding. The result obtained was gratifying, brought about a fair distribution of water and benefited the tail portion of the canal. The Choi Branch suffered heavily from the breach in the Sukkur Begári Bund which took place on September 1st. A revised estimate for this branch is under preparation. Three distributaries have been excavated and 9 more remain to be carried out. Begári Canal.

This canal was opened on the 4th June 1909. The supply at the tail was regulated by rotation as usual. The canal ceased to flow on the 1st October 1909 owing to heavy silt deposit in its new feeder, due to the erosion of the river above the mouth. Sind Canal.

Sukkur Canal.

The Rahuja head of the Sukkur Canal was opened on the 5th June 1909. It worked very well during the season, maintaining a good water level throughout. It was found unnecessary to open the old head, as the Rahuja Head provided a sufficient supply for all requirements.

Ghár Canal.

This canal was opened on the 4th June 1909. The supply during the season was fair; there was a deficiency in the supply of certain branches and in the tail of the Ghár which was relieved by frequent rotations in the Nasirabad Táluka of the Kambar Sub-division. The Fordwah, which was opened on the 27th May, worked well. At the end of the season some of the "Dhands" feeding it silted owing to the rapid erosion of the river just above the "Dhands." To improve the supply of the Ghár, three works (1) a new feeder to the Dhand leading to the Fordwah, etc., called the Fordwah Feeder, (2) widening Dhoro *ex* the river to feed the Ghár Dhand, and (3) clearance of Dhoro No. 1 *ex* Ghár Dhand, leading to Fordwah, were carried out at an aggregate cost of Rs. 45,004.

Western Nára.

The work of widening the new Akil Mouth to the Western Nára was practically completed. The bund at the mouth of the canal was removed on the 16th May 1909, and the canal worked, on the whole, fairly well aided by its two feeders (the Pritchard Canal, and the New Feeder). The total expenditure to the end of the year was Rs. 1,65,887. The work of clearing the tail of the Akil Dhand was commenced and the expenditure during the year was Rs. 15,000. The other canals in the Western Nára District, *i. e.*, Pritchard, the New Feeder and the Marvi, worked very well.

Sattah.

This canal has its off-take from a "Kohri," which in turn is fed by a cut from the left bank of the river in the Shahbandar Sub-division of the Karáchi Canals District. The cut silted heavily in the inundation of 1908, but was cleared in the working season of 1909 at a cost of Rs. 15,014. The canal worked well, and the area cultivated was above the average, and the crop outturn exceptionally good.

Works for which only Revenue Accounts are kept.

In the Shikárpur Canals District, the works of raising and strengthening the banks of Rajib, Chiti, and Garang Canals, commenced last year, were completed during the year under report and a Protective Bund along the southern boundary of the Garhi Halim Forest was constructed. In the Karáchi Canals, the canals worked well; a few breaches in the banks of Pinyari and Baghar were successfully closed. Special repairs to the Baghar embankments, which were commenced in the last year, were completed this year at a total cost of Rs. 16,582. New Regulators over the Mahomedwah in mile 44 of the Mulchand Shahbunder Bund, and Mirwah Nawab in mile 42/1, and the Khatian behind Panah Baghar Bund at mile 1/4, and a combined regulator over the Hajiwah and the Jamwah, were constructed during the year.

Kashmor Bund.

The erosion of the Indus north of Sukkur was excessive during the year. On the right bank, from the northern portion of the flood embankment, termed the Kashmor Bund, erosion set in heavily at the Unbárwah mouth, and continued from mile 10 to 7 of the 1896 loop. The important works along this length during the year under report were (a) on the New Ghonspur loop, an outlay of Rs. 37,627, (b) reconstructing old Tori Bund from Tori Bungalow (Ghonspur loop) to 1896 Loop Tori Cross at an expenditure of Rs. 20,989, (c) constructing Haibat loop from Ghoraghat to Tori Stop Gates Regulator at a cost of Rs. 1,01,153, and (d) a loop from the Tori Bungalow to the junction at an outlay of Rs. 18,348. Extension of the Khunderwah to feed the Ghonspur Branch was completed, the cost being Rs. 6,146.

In the Shikárpur Canals District, on the southern part of the right embankment above Sukkur, a continuation of the Kashmor Bund, called the Sukkur Begári Bund, the important works undertaken were (a) raising the Sukkur Begári Bund, mile 19/1 to 19/64 (b) constructing seven loops to Sukkur Begári Bund, *i. e.*, (Emergency loop, 80/3 mile loop, 29/; mile loop, North loop, Tie loop, South loop, and West loop); (c) raising and strengthening the existing Abad loop of 1900. This was necessary as the Sukkur Begári Bund in front of the existing Abad loop of 1900 was threatened by river erosion at mile 23/0. Nearly 2/3 of this work was completed during the year under report; (d) Railway Diversion Bund, Rohri. Owing to rapid and extensive erosion of the river near the main line of the North-Western Railway, North of Rohri between that town and Mando Diaro, a diversion two miles long behind the threatened portion was constructed, the Irrigation Department making the river face of rammed earth and watertight. The cost of the work carried out by Irrigation Department was Rs. 32,457. Special reports have been made on the work done at these places of very severe erosion, (e) on the Sukkur Begári Bund and (d) near Rohri, and the officers concerned thanked for their successful efforts. In the Karáchi Canals District, the important works completed during the year under report were (i) raising and strengthening Marho loop at a cost of Rs. 17,990, (ii) new Muparki loop, Rs. 70,824, and (iii) new Kokawari loop Rs. 82,627.

Surveys.

Preliminary survey of the Baghar Canal and its branches, survey for the proposed Khebat Canal and Begári Remodelling, and the preparation of the detailed plans and estimates of the Right Bank Canal Project were completed during the year under report. An outlay was incurred during the year in connection with the survey for the diversion of Ghotki and other floods from the Eastern Nára, of Rs. 11,225, and has been accounted for in the Eastern Nára District.

Tree planting in gardens and nurseries was carried on, and the trees are generally in a flourishing condition.

The Begari Canals District was visited by an earthquake on October 21st at about 5 o'clock in the morning. Some buildings were damaged, and repairs to them will cost Rs. 35,000. The banks of the Uch Rajwah were in an extraordinary state; part of the bank subsided leaving fissures from 3 inches to 2 feet in width. To repair the banks about Rs. 13,000 will be required.

INDUS LEFT BANK DIVISION.

The canals in the Left Bank fall into two groups: (a) the Eastern Nára System and (b) the canals taking off direct from the Indus.

Under (a) come the Nára River, the Jámráo, Mithráo, Heran, Khipro, Thar and Hiral Canals, of which the Khipro and Heran are inundation canals, the rest being perennial. But the Thar, though classed as perennial, is closed on 1st December each year to save the country round about from being water-logged.

Under (b) fall the Dad, Nasrat, Fuleli, Hasanali and a large number of smaller canals, all being really inundation canals, though the Fuleli receives a certain amount of rabi supply.

Eastern Nára System.

The discharge in the Nára Supply Channel was very deficient up to end of July owing to the low state of the River Indus and also to the deposit of silt in the channel. When the river subsequently rose, the silt deposit was partially scoured out and the channel gave a fair discharge. The heavy floods of 1908 had breached both the banks of the supply channel in miles 7 to 12. The work of reconstructing these banks to two feet above the flood level of 1908 and strengthening them, commenced in 1908-1909, was completed during this year and cost Rs. 21,302.

There are 275,500 acres of culturable land which can be irrigated direct from the River Nára. The average area of cultivation is 58,000 acres, but in flood years it is much higher, reaching nearly 150,000 acres in 1906-1907.

There was no flood of importance this year. The cost of maintenance was Rs. 26,887 compared with Rs. 57,746, the average of the previous 10 years.

Jámráo Canal.

The area cultivated during the year under both kharif and rabi was about 167,400 acres compared with 224,900 acres, the average of the past 10 years. A decrease of more than 30,000 acres in the kharif season was due to shortage of water in the early part of the season and was accentuated by the scarcity of labour, while the decrease of 20,000 acres in the rabi season is reported to be due to the cultivators expecting the closure of the canal in the rabi season in order to carry out part of the remodelling scheme, and for the same reason no Egyptian cotton was grown. The crops grown, especially cotton, were exceptionally good, the yield and prices being above the average.

The rainfall, though much less than in 1908, was well above the average.

No new colonists were imported from the Punjab, but 3,718 acres were given to relatives of existing colonists, while 7,431 acres were given out as shown below:—

	Acres.
In extension of holdings	3,043
To Zamindárs specially recommended	2,945
In exchange for land acquired for Railway	35
Juniof Talpurs	223
Sold by auction	52
Military pensioners	1,101
Local Zamindárs	32
Total	7,431

The capital expenditure was Rs. 58,403 after deducting recoveries from colonists amounting to Rs. 26,995; thus the total amount spent on works was Rs. 85,398. This was mainly incurred on earthwork and collection of materials for the 17th, 46th, 56th and 65th mile projects and in excavating a drainage channel in the Dhoru Puran. The earthwork of Dalor, Pafoi, and Berani minors commenced last year was completed. The remodelling of Doso Dahraro, Lakhaki and Mirpur Minors was commenced and completed during the year. The groynes in the first seven miles of the Jámráo Canal continue to act successfully. In September 1909, a deep scour hole below the 46th mile regulator was protected by depositing 5,000 c.ft. of stone, in a layer about 2' thick as uniformly as possible over the bed for a length of 50 feet. The maintenance of the whole system for the year cost Rs. 1,37,236.

Mithrao Canal.

The length from mile 70 $\frac{1}{4}$ to mile 80 has been cleared to its original depth at a cost of Rs. 7,575. Single groynes have been gradually constructed and maintained wherever the canal was scouring. The result in maintaining a good canal section and avoiding heavy expenditure on silt clearance has been far more beneficial than was anticipated. The canal commands 400,100 acres of culturable land, of which 146,000 acres are irrigated annually. The kharif supply was deficient and rotation was resorted to, but this once again proved to be a mistake, and it has now been decided that, whatever the supply, there shall not be any rotation during the kharif season, as it increases the silting. The rabi irrigation on the other hand was excellent and 20,000 acres of 18 anna crops were obtained against 8,000 of the previous year.

The canal was maintained at a cost of Rs. 44,079.

Hiral Canal.

The canal was opened on 18th May, but all the minors were not opened till 7th June. The supply of water throughout was sufficient. The canal commands 38,300 acres and the area irrigated was about 15,000 acres, which is the figure entered in the financial forecast of the project. But a better result could be obtained if the channels could be kept clear of weeds and pan grass.

An area of 1,389 acres was given out during the year as under :—

	Acres.
In extension of holdings	909
Sindhi Zamindárs specially recommended	384
Thari colonists	96
Total ...	1,389

The canal was maintained at a cost of Rs. 8,990.

Thar Canal.

This canal commands 144,800 acres of culturable land, and yields on the average 58,000 acres of irrigation. Until nearly the end of July 1909 the water-supply was deficient and rotation was adopted; after that it was ample.

The cost of maintenance was Rs. 11,075.

The remaining canals in the Nára System call for no particular remarks. They suffered from the poor supply in the months of June and July, the Khipro the most, but the subsequent supply and rainfall were good.

CANALS TAKING OFF DIRECTLY FROM THE INDUS.

Dád Canal.

The canal worked satisfactorily during the year with a steady river throughout the Abkalani at the head of the Dhand feeding the Dád. The cultivation was about 122,000 acres and the people are now readily taking up land on this canal.

The total amount spent on works (Capital Account) was Rs. 10,850, or Rs. 3,671 after deducting recoveries from colonists. Most of this expenditure was incurred on constructing karia Head Regulators. The total expenditure on behalf of Zamindárs to end of 1909-1910 on karias and kasis (water-courses) amounts to Rs. 1,23,798, of which Rs. 97,405 have been recovered. The recoveries during the year amounted to Rs. 7,179.

An area of 1,758 acres was allotted during the year as under :—

	Acres.
To Sindhi Zamindárs especially recommended	1,273
In extension of holdings	470
In satisfaction of barani claims	15
Total ...	1,758

The canal and its branches were maintained at a cost of Rs. 63,549.

Nasrat Canal.

This canal commenced to flow on the 2nd June, a month later than usual, owing to the delayed rise in the river and to erosion at the head of the Lundi Dhand which feeds this canal. This had a disheartening effect on the people in the Nasrat (Desert) Táluka where necessity for water is greatly felt for drinking purposes, specially for cattle, but the supply when it came was satisfactory. The reduction of the openings of all outlets, through which it was possible to take more than a fair share of the water, has worked very beneficially on this system. The cultivation was about 103,600 acres.

The total expenditure on works (Capital Account) was Rs. 24,349 or Rs. 9,758 after deducting recoveries from colonists. The Nasrat, which is 79 miles long was further extended by 3 miles for the irrigation of 2 new Dehs, Shah Hassan and Kubo Mir Shahdad, in the Shahdādpur Tāluka of the Hyderabad District. This involved strengthening the banks in miles 63 and 64 of the canal.

The expenditure to the end of 1909-1910 on construction of water-courses on behalf of Zamindārs amounts to Rs. 2,76,195, of which Rs. 2,30,193 have been recovered, Rs. 29,665 being this year's contribution.

Land was given as under :—

	Acres.
To Sindhi Zamindārs specially recommended 3,267
Military pensioners 270
In extension of holdings 1,723
Total <u>5,260</u>

The canal was maintained at a cost of Rs. 51,471.

Fuleli Canal.

On this important canal the cultivation is probably a little in excess of the 10 years' average of 376,448. The inundation of 1909 was a good one and the area of rabi crops is expected to be larger than usual. A few small works amounting to Rs. 5,091 were carried out and the canal and its branches were maintained at a cost of Rs. 1,58,325.

Hasanali Canal.

This small canal had an excellent supply. The new head regulator at the Katiar Loop bund commenced last year was completed this year at a total cost of Rs. 26,632. Proposals are being considered for improved control over the water in lower reaches of the canal and the low duties obtained will, it is hoped, be raised appreciably. The canal and its branches were maintained at a cost of Rs. 16,979.

Central Hyderabad Canals.

The rise of the river commenced on 4th June, and the supply was steady and sufficient. This aided by good rains gave a very good season and the various canals in this District for which Capital and Revenue Accounts are kept did well.

The expenditure on maintenance was Rs. 37,248.

Works for which only Revenue Accounts are kept.

The Mehrabwah and Bhurwah large are the only canals in the Northern Hyderabad Canals District with an indifferent supply due to the recent movements of the river. For the former, a new mouth was sanctioned and is under construction, and for the Bhurwah, it is proposed to give a cut from the Naulakhi Canal. All the other canals in the Northern and Central Hyderabad Canals and Fuleli Districts worked well.

Surveys.

Detailed surveys were continued in connection with the plans and estimates for the Eastern Nāra Project.

Surveys were made also for the Ghotki Canal Project and the diversion of what are termed the "Ghotki Floods" from the Eastern Nāra Supply Channel. The latter project is the first step towards the improvement of the Supply Channel, and is an urgent need.

Protective embankments.

In the Northern Hyderabad Canals District, there was some erosion at the 3rd mile of the Naulakhi Bhorti Bund, but it soon ceased. The construction was commenced of a new bund between the Nasrat and the Naulakhi to keep the flood water away from the Mohbat and Lundi Dhands. These Dhands feed the Naulakhi and Nasrat Canals. The estimated cost is Rs. 8,304 and Rs. 7,000 were spent on it during the year. There was a breach in the small loop bund along the Renwah in the Central Hyderabad Canals District 35 feet wide with water 3-7' deep. No damage was done as it occurred near the end of the Abkalani.

In the Fuleli Canals District, the extension of the new Jamshora Bund of 1899 and the loop behind the Gidu Bunder bund, mile 0/7 to 1/2, were completed, the year's expenditure on them being Rs. 9,198 and Rs. 5,501 respectively. The Sang Budhka loop referred to in last year's report was continued in Section II and Rs. 69,994 were spent on it. The other Sections I and III being less urgent will be carried out when funds are available. The flood water stood against all the river bunds in this district, but they were successfully protected from damage. The set of the river was very severe against the Gidu Bunder Bund. The

wind here was very strong and the wavewash undermined the stone pitching and threatened the front bund, and here and also on the Hajipur Bund and Katiar loop, additional protection by stone pitching and brushwood was necessary.

Plantations.

The existing plantations on canals and bunds were maintained in good order. Tree planting is being actively carried on on the Jámrao Canal.

The Irrigation of Cotton Crops.

No Egyptian cotton was grown in the Left Bank Division in 1909. The observations made on indigenous cotton show that, with inundation canals, the waterings are limited to the time the water flows, up to the end of September or middle of October, but with perennial canals it is customary to continue watering far longer, and on the Jámrao more than 90 per cent. of the area is watered in November, and about 25 per cent. in the first half of December after which there is very little cotton irrigation to record.

The ground should, it appears, be wetted and aerated by ploughing say in March, then wetted, ploughed and seeded in June. The subsequent irrigation consists of about 9 or 10 waterings, but varies, with the nature of the soil presumably, from 6 to 12. On the Jámrao, one case of 17 waterings is recorded, but the outturn is said to be much the same and not improved by such frequent watering. There seem to be generally a few more waterings on lift than on flow land, and this would be explained by the actual quantity delivered at a time being more in the latter case.

INDUS RIVER COMMISSION.

Works.

The works carried out during the year were charged to "43—Irrigation Minor Works and Navigation—Agricultural Works—Works for which neither Capital nor Revenue Accounts are kept."

All surveys carried out under the supervision of the Superintending and Chief Engineer, Indus River Commission, are classed under the head mentioned above. During the year the usual topographical surveys were made aggregating 703 miles in length.

The following surveys of the river were carried out during the year in a total length of 450 miles :—

- (1) Survey of the river from the tail of the Kháiriri Dhand to Sukkur, 105 miles in length.
- (2) Survey of the Gudu Dhand and its feeders in 61·5 miles length.
- (3) Survey of the river below Sukkur, from Sukkur to Puranadero, 150 miles.
- (4) Surveys of the Dhands and River Channels, 90 miles in length.
- (5) Surveys at the mouths of the old Fuleli and the Fuleli Canal, of 24 miles in length.
- (6) Surveys were made for a length of 10 miles from Kotri downstream and for 8 miles at the Pinjari Dhand, and from the upper end of the Panah Baghar Bund to the bifurcation of the river, a length of 60 miles. Two miles of the heads of each of the branches were surveyed. A hydrographic survey was also made in a length of 5 miles above and 5 miles below Sukkur.

Khairpur Boundary Pillars.

The usual inspection of the Khairpur boundary pillars was carried out during the season. Rails Nos. 6, 7, 8, 31 and 32 on the left bank, which were in danger of erosion by the river, were moved back and the necessary corrections have been made in the plans.

The borings for the proposed Sukkur Barrage. River gauges.

Borings to determine the level of the rock surface in the river-bed in connection with the project for a Barrage at Sukkur were carried on till May 1909, when they were stopped.

Gauges at the Haideri and Uchito mouths of the river are read daily at high and low tides.

The other river gauges are :—

- | | |
|--------------------------------------|--------------------------------|
| (a) Opposite the Desert Canal Mouth. | (e) At Bagotora (near Sehwan). |
| (b) Opposite the Unhárwah Mouth. | (f) At Kotri. |
| (c) Opposite the Rajibwah Mouth. | (g) At Jerruck. |
| (d) At Bukkur. | |

The northern gauges have given very useful information in connection with the estimation of the probable maximum flood level in the river at any point and which determines the proper level for the protective embankments. The hydrographs for each of the gauge stations will be published in the Indus River Records.

Discharge of the Indus.

Discharge observations were made at Sukkur and Kotri all the year round and at Deragazikhan during the cold weather. Velocity observations were also made at different depths by Haskell's current meter, type B.

The maximum discharge measured at Sukkur during the year under report, was 631,796 cusecs on 28th August 1909 with a mean velocity of 10.23 and a Bukkur gauge reading of 14.4 which was the highest reading during the abkalan season.

The minimum discharge measured at Sukkur was 30,813 cusecs on 26th March 1910 with a mean velocity of 2.18 feet and a Bukkur gauge reading of 0.6 feet. The minimum reading on the Bukkur gauge was 0.50' for 9 days in January and 7 days in February when the measured discharge varied from 36,000 to 46,000 cusecs.

The discharges of the Indus at Sukkur during the abkalan months, June to September, for the years 1905-1906 to 1909-1910 are compared below:—

Month.	1905-1906.	1906-1907.	1907-1908.	1908-1909.	1909-1910.
	C. ft.	C. ft.	C. ft.	C. ft.	C. ft.
June	11,845,000	7,497,000	7,051,000	7,689,000	8,254,000
July	13,227,000	12,522,000	7,193,000	13,094,000	12,323,000
August	10,507,000	16,263,000	12,060,000	15,567,000	16,606,000
September	8,243,000	12,431,000	5,149,000	15,383,000	13,106,000
Total *	43,882,000	48,713,000	31,453,000	51,737,000	50,288,000
Average discharge	359,689	899,297	257,811	424,074	412,197
Maximum do. measured	530,842	616,580	425,289	821,511	631,796
Minimum do. do.	166,651	212,813	139,013	158,135	211,460
Minimum discharge measured throughout the year	22,539	32,951	26,462	25,712	30,813

* Note.—These figures represent the sum of the daily discharges in cusecs of the river and to arrive at the total quantity of water passing Sukkur during the four months, the total must be multiplied by 86,400, the number of seconds in a day.

Silt experiments and observations of sand waves, the work of preparing velocity curves at various depths and other observations have been continued and will be published in the records of Indus River Commission. Scientific Work (General).

The estimated cost of the works sanctioned during 1903-1910 by the Indus River Commission in each district under these heads is given below:— Extensions, Improvements and Special Repairs.

<i>Indus Right Bank Division.</i>					
District.				Extensions and Improvements.	Special Repairs.
				Rs.	Rs.
Begari Canal	3,06,205
Shikarpur Canals	61,921	1,45,106
Ghar Canals	79	...
Western Nara	1,254	...
Karachi Canals	12,307	69,268
Total				76,061	6,20,579
<i>Indus Left Bank Division.</i>					
Northern Hyderabad Canals	8,304	...
Central Hyderabad Canals	547
Fuleli Canals	9,026
Total				8,304	9,573
<i>Indus River Commission.</i>					
Works under the direct control of Indus River Commission	26,131	...
Total				26,131	...

The total expenditure under this head on the several works under the direct control of the Indus River Commission was Rs. 24,385, of which Rs. 3,208 were spent on the river gauge establishment at Sukkur, Kotri, Jerruck, Khairabad (Punjab) and the Indus Delta. Maintenance and Repairs.

The removal of trees and snags of all kinds which caused obstruction to navigation on the main channel of the river was carried out as usual. During the year under report, there were fewer snags in the navigable channels than in former years in consequence of the river having changed its course in the vicinity of some of the large forests where erosion was very active 3 years ago. The Uchito which gave trouble for so many years is now a good navigable channel for steamers as well as for country boats.

The expenditure incurred on snagging operations of which a summary is given below has been debited to the Public Works Department :—

					Rs.
Works	26,131
Repairs	23,840
Establishment	89,305
Tools and Plant	4,682

General.

The maximum reading on the Bukkur gauge during the season was 14·6 feet, which gave the maximum observed discharge of 631,796 cusecs, with a mean velocity of 10·23 feet per second, as compared with 9·68 in 1908 and 8·43 in 1906. This gradual increase in the velocity is due to hends having been cut off both above and below Sukkur, but the straightening appears to have reached its limit, and the mean velocity may be expected to decrease. The maximum gauge reading at Kotri was 20·8 feet.

The lowest reading on the Bukkur gauge during the year was *plus* 0·5 as compared with *minus* 2·4 in 1908-1909, *minus* 2·0 in 1907-1908 and *minus* 0·6 in 1906-1907.

Erosion.

Heavy erosion occurred between miles 8 and 10 of the Kashmir Bund, near the mouth of the Unhárwah, the maximum rate of erosion being 600 feet in a week. There were no breaches.

Irrigation Revenue.

The revenue credited to this head falls under two categories—(1) the direct receipts of the Irrigation Department and (2) the irrigation share of the land revenue assessed with reference to the supply of water from canals, tanks, dams and other sources created or maintained by the Public Works Department. The works are also divided into three classes:—the first includes entirely new works and works restored or extensively improved for which capital and revenue accounts are kept; the second includes old works which are maintained by the Department and for which only revenue accounts are kept; and the third includes agricultural works for which neither capital nor revenue accounts are kept. The direct receipts on account of works for which capital and revenue accounts are kept were as follows:—

Half Imperial and Half Provincial.

(1) Productive Public Works—	Rs.			
(a) Sind	1,99,954
(b) Deccan and Gujarát	5,95,639
(2) Protective Public Works—				
(a) Deccan and Gujarát	4,72,493
(3) Minor Irrigation Works—				
(a) Sind	72,556
(b) Deccan and Gujarát	1,76,567
Total	15,17,208

The corresponding receipts for 1908-1909 were Rs. 12,87,064. The irrigation share of land revenue on account of works for which capital and revenue accounts are kept was as follows:—

Half Imperial and Half Provincial.

(1) Productive Public Works—	Rs.			
(a) Sind	25,65,715
(b) Deccan and Gujarát	4,089
(2) Minor Irrigation Works—				
(a) Sind	14,97,946
(b) Deccan and Gujarát	7,961
Total	40,75,711

The following table shows the financial position at the close of the year of irrigation works of all classes for which capital and revenue accounts are kept:—

	Capital outlay in the year.	Capital outlay up to the end of the year.	Working expenses during the year.	Net revenue during the year, direct and indirect.
	Rs.	Rs.	Rs.	Rs.
Productive Works	2,82,493	3,90,87,800	11,53,121	22,07,276
Protective Works	24,86,643	1,58,82,861	1,17,036	8,56,456
Minor Works and Navigation	1,60,443	1,36,51,216	5,75,810	11,79,120
Total	28,79,519	6,84,21,977	18,51,067	37,41,852

The revenue and expenditure on account of works for which only revenue accounts are kept were as follows:—

	Works in Sind.	Works in the Deccan and Gujarát.	Total.
	Rs.	Rs.	Rs.
Gross Revenue	79,059	9,176	82,235
{ Direct	24,50,298	5,02,653	29,52,956
{ Indirect	25,23,357	5,11,334	30,35,191
Total	25,23,357	5,11,334	30,35,191
Working Expenses	7,65,701	4,28,584	11,94,285
Net Revenue	17,57,656	83,250	18,40,906

The revenue and expenditure in respect of works for which neither capital nor revenue accounts are kept were as follows:—

	Works in Sind.	Works in the Deccan and Gujarát.	Total.
	Rs.	Rs.	Rs.
Gross Revenue	12,514	6,949	19,463
{ Direct	9,56,970	9,56,970
{ Indirect	9,69,484	6,949	9,76,433
Total	9,69,484	6,949	9,76,433
Working Expenses	18,88,215	89,567	19,21,782
Net Revenue	-3,68,731	-76,618	-9,45,349

This work is a part of the Pravara River Irrigation Project but separate account has been maintained until the new project is completed sufficiently to give an increased supply of water to the other canals, vide Government of India No. 1951-1, dated 18th September 1908, communicated in Government Resolution No. 2731 of 20th October 1908.

Estimate amounting to Rs. 3,14,574 for direct and indirect charges included in the above project sanctioned in the Secretary of State's Despatch No. 38-P. W., dated 9th August 1907, communicated in Government of India No. 1681 of 28th September 1907, vide Government Resolution No. 2557 of 22nd October 1907, has been shown here.

(e) Storage available after deducting 508 million cubic feet not used on account of the Poona water-supply.
 (f) Information supplied in Statement I-A, the tank being only a feeder.
 (g) The tank supplies the Pātkhed, Ojhar Tambat and Wādālī Canals and their distributaries as noted in Statement I-A.
 (h) Exclusive of 29 miles of Gondavālī Canals.
 (i) Includes 334 miles of branch canals.
 (j) Estimate not yet sanctioned.
 (k) The tank supplies the Girna Left Bank Canal and Palna, Sawki, and Bōv bādhāsās.
 * Right Bank, 1'13 miles channel constructed by this Department in 1901-1902. Left bank, 1'26 miles Irrigation Channel.
 † An additional storage of 214 million cubic feet was obtained by raising the weir temporarily, the full supply level being at 1'74 feet above crest of the present weir.

(a) Excluding remissions shown in Canal Returns No. V.

(b) Irrigation share of Land Revenue assessments.

(c) Net assessed revenue is minus figures, hence no percentage is calculated.

E. D. CHANTER,

Offy. Deputy Accountant General, Public Works, Bombay.

STATEMENT I-E.

E.

Bombay Presidency, excluding Sind, during the year 1909-1910.

AREA IRRIGATED PER CUBIC FOOT PER SECOND.				BASE TO WHICH THE DUTIES OF WATER ARE CALCULATED.		Remarks.
Discharged at Head.		Utilized.		Kharif.	Rabi.	
Kharif.	Rabi.	Kharif.	Rabi.

Note.—The difference between the figures of total areas and assessments in this statement and those in Statements I—E to IV—E is due to difference in treatment of fractions in some cases, and in others to the fact that the figures in this statement are more or less hypothetical and are arrived at on the assumption that certain areas are assessed on certain rates only.

* Exclusive of 1,807 acres of Mámul Bágayat area on the Lower Pánjhra River Works, but inclusive of 323 acres on account of the area of irrigation in blocks on the Nira Canal, including Sheshpal Tank; excludes 291 acres of irrigation blocks under the Bhádvali Tank which was double cropped.

† Exclusive of Rs. 8,352 on account of enhanced water-rates on old works of the Lower Pánjhra River Works.

* Note.—The minimum discharge of the River during 1909-1910 was:—

Bukkur ... 31,000 cusecs on 26th March 1910.

Kotri ... 32,000 cusecs on 26th March 1910.

† The decrease in the amount as compared with last year is due to omission of certain works sanctioned in the original project having been found unnecessary. This amount is now equal to expenditure to 1907 when construction estimate was closed plus the amount of schedule of incomplete works.

§ Practically a River.

The high Δ is due to the fact that the average discharge have been calculated for a much longer period than four months of the abkalan as the canals were still flowing. The high Δ is due to a large quantity of water running to waste into the sea.

*The high rabi Δ is partly due to 74,828 acres of cotton, a kharif crop being watered for a few months in the rabi season.

§The duty of water on Hassanali works out to 27 acres per cubic foot, but it would be about 30 or 31 if the wastage on the canal on dhunds and depressions be deducted from the actual discharges. As this is not known no deductions have been made. It may approximately be 60 to 100 cusecs.

STATEMENT II-E.

Statement showing Incidence of Working Expenses on Assessed Revenue on Canals in Sind during the year 1909-1910.

Name of Canals.	Average discharge of the year at Canal Head in Cubic feet per Second.	WATER-RATE ASSESSED, DURING 1909-1910.					Gross Assessed Revenue from all sources.	Working Expenses, Direct and Indirect.	Acres Irrigated during the year 1909-1910.	WORKING EXPENSES.			80 PER CENT. OF NET CONSOLIDATED ASSESSMENT.		TOTAL WATER-RATE DIRECT AND INDIRECT.	
		Occupier's.	Owner's.	Total, Direct.	Indirect.	Total, Direct and Indirect.				Per cent. on Gross Revenue.	Per Acre Irrigated.	Per Cubic foot per Second of discharge at Canal Head.	Per Acre Irrigated.	Per Cubic foot per Second of discharge at Canal Head.	Per Acre Irrigated.	Per Cubic foot per Second of discharge at Canal Head.
