ADMINISTRATION REPORT OF THE FOREST CIRCLES IN THE BOMBAY PRESIDENCY, INCLUDING SIND, FOR THE YEAR 1913-1914.

CONSERVATORS IN CHARGE OF CIRCLES DURING THE YEAR:-

Northern Circle.

G. R. Duxbury, Esquire, 1st July 1913 to 24th October 1913.

O. H. L. Napier, Esquire, 25th October 1913 to 17th April 1914.

W. E. Copleston, Esquire, 18th April to 30th June 1914.

Central Circle.

O. H. L. Napier, Esquire, 1st July 1913 to 17th October 1913.

The Honourable Mr. G. P. Millett, 18th October 1913 to 30th June 1914.

Southern Circle.

T. R. D. Bell, Esquire.

Deputy Conservator of Forests in charge Sind Circle.

E. G. Oliver, Esquire, 1st July 1913 to 2nd April 1914.

D. A. Thompson, Esquire, 3rd April 1914 to 30th June 1914.

CHAPTER I.

CONSTITUTION OF STATE FORESTS.

(1) Alteration in Area.

Northern Circle.

RESERVED FOREST.

The changes in forest areas shown in forms Nos. 7 and 7A give a net increase of 191 acres to reserved forest.

The following are the details:-

Kolába.—The acquisition, by payment of compensation, of 132 acres of inám forest land in Chincholi and the transfer of 194 acres in Borgaon from protected to reserved forest and the disforestment of 85 acres for roads and village sites gives Kolába a net increase of 241 acres.

South Thána.—Fifty acres disforested for extension of G. I. P. Railway works.

. PROTECTED FOREST.

Of this class of forest there is a net decrease of 219 acres, most of which area has been classed as reserved forest.

Kolába.—Of the 210 acres excluded from protected forest most of this was transferred to the Karjat reserved forest.

About 28 acres of reserved forest in the village of Tare in Panvel was made protected forest for the convenience of the villagers.

South Thána.—Thirty-one acres of protected forest were handed over to the G. I. P. Railway.

Other smaller areas were disforested for enlarging village sites. H 1038-1

Central Circle.

Class of Forest.		Area on 1		Added during the year. Excluded during the year.		Arca on 30th June 1914.			
Reserved Protected Leased		Sq. m. 6,180 99 0	acres. 527 237 232	Sq. m. 2	12	Sq. m.	63 0	Sq. m. 6,180 99 0	549 237 232
Total	•••	6,280	356	2	12	1	630	6,280	378

The additions to reserved forest consisted of various small areas in different districts which were acquired for the purpose of improving the forest demarcation line; and the exclusions similarly consisted of small areas disforested in the interests of cultivation, etc.

The above statement shows the extent of land gazetted under the Indian Forest Act as forest. The area actually under the management of the Forest Department is now 4,421 square miles only. The remainder, amounting to 1,860 square miles, is assigned to the Revenue Department for management under the circumstances which have been stated in previous reports. During the year under report 28,171 acres of reserved forest in the Poona Division were handed over to the Revenue Department. The change in the management of the forests is being effected gradually, as the necessary arrangements for taking charge of them are completed by the Collectors.

Southern Circle

The several small changes that have taken place do not affect the total acreage of the forest very much. In the Belgaum Division 6,570 acres of protected forest were transferred to reserved. Scattered waste lands measuring 911 acres, which were more fitted for forest in Kánara, Dhárwár and Bijápur, were also made reserved forest. Six hundred and eighty-two acres of reserved forest—all divisions subscribing—were disforested in favour of occupation, pasture and the M. & S. M. Railway. The addition of 41 acres to protected forest is on account of bettas for extensions of spice-gardens in Kánara S. D.

The net results are exhibited in the following abstract:—

Class of Forest.		Area on 1st July 1913.	Added during the year.	Excluded during the year.	Area on 30th June 1914.
Reserved Protected	•••	Acres. 2,852,505 92,205	Acres. 7,476 41	Acres. 682 6,766	Acres. 2,859,299 85,480
Tota	ı 	2,944,710	7,517	7,448	2,944,779

Sind Circle.

The alterations in area are:—

Class of Forest.			Area on 1st July 1913.		Added du the ye	Added during the year.		during er.	Area on 30th June 1914.		
			Sq. m.	acres.	Sq. m.	acres.	Sq. m.	acres.	Sq. m.	acres.	
Reserved		•••	1,135	528	20	248	17	280	1,138	496	
Protected	·	•••	0	585		· · }	•••••	•	o	585	
	Total	•••	1,136	473	20	248	17	280	1,139	441	

The additions are 19 square miles, 374 acres of alluvial accretion and 514 acres of fresh reservation.

The exclusions are 17 square miles, 236 acres eroded and 44 acres by rectification of area.

The eroded area is classified thus:

				- 4		Acres.
_	aluable tim		****			1,545
	ium without			•••	•••	2,882
	_	ung growth	•••	•••	•••	2,031
Coupes und	der regener	ation	•••	140	***	2,654
Blanks	•••	•••	•••	***	***	2,004
•				Total		11,116

In the previous year the total erosion area was 20,037 acres.

Value of material exploited from eroded areas (vide Government Resolution No. 804 of 2nd February 1900):—

Approximate area eroded after exploitation	•••	Acres. 1,596
	•	Rs. a. p.
Value per acre as estimated prior to erosion		5 12 7
Estimated value of timber before exploitation		8,891 0 0
Actual receipts	•••	9,686 9 11

An area of 8 acres and 30 gunthás in Lárkána Division, containing growth of the value of Rs. 15-13-5, was eroded before exploitation was possible, as erosion was very rapid.

Two thousand two hundred and ninety-five acres threatened with erosion were exploited. The resultant material was sold for Rs. 12,030-9-10.

Acquisition of kachas adjoining forests:—

Kachas pending at the end of last year	•••			•••	14
New claims during the year	***	***		•••	26
Decided in favour of the Forest Depart	ment	***		•••	21
Decided against the Forest Department	•••	***		***	2
Still undecided	***	•••	•	•••	17

Eight thousand eight hundred and thirty-six acres 13 gunthás were temporarily alienated to other departments.

(2) Forest Settlements.

Northern Circle.

Form 8. Forest settlement work is practically complete in this circle.

Kolába.—An area of 18 acres of Akshi village selected for planting casuarina will be notified under section 19, Indian Forest Act. Also 25 acres in Varsoli selected for the same purpose and 35 acres in Khálápur acquired by exchange have been notified under section 4. Thirty-seven acres in Bandh-Tiwre of the Ratnágiri District have been proposed for acquisition for consolidating the forest.

Surat.—The re-settlement of Bulsár-Chikhli Range is in abeyance.

Central Circle.

The work has been completed. Certain survey numbers situated inside the reserved forest demarcation line have been sanctioned for addition to

forest as opportunities to acquire them occur. Some of these lands were acquired during this year without expenditure and others on payment of compensation; and Rs. 1,241 were paid thus to the occupiers of lands who were willing to relinquish them for inclusion in forest.

Southern Circle.

Rs. 3,428 were paid as compensation for lands acquired for forest in the Belgaum Division where an area of about 44,000 acres suitable for forest has been proposed for afforestation with a view to simplify forest boundaries and to make the protection of reserved forest more easy, as also to secure an increase in the efficiency of control. The inclusion of this area does not affect the condition of agriculturists adversely as they earn more by work in forest operations, cuttings, etc. The proposals are, however, still under consideration; inquiries, land valuations and other formalities have to be gone through by revenue officers.

A piece of land measuring 2 gunthás in the village of Manki was acquired for Rs. 34 for a forest road in the Honávar Táluka.

In other divisions there has been practically no settlement work.

There still remains much settlement to be done for the improvement of forest boundaries, the inclusion of waste numbers which have been lying fallow nearly since the settlements, and of odd small numbers far away from other cultivation in the middle of large forest blocks. The work of afforesting these is being gradually done, but, in the absence of special officers, it will take a very long time.

Sind Circle.

			•	Acres.

Polomos amaikin u autilaurus t		-		3 5, 392
Balance awaiting settlement	•••	• * • '		3, 293
Expenditure,	•••	•••		Nil.

Out of the total area of 35,388 acres notified under section 19, 34,874 acres consisted of *kacha* lands. This area at the time of its acquisition was already included in form no. 7.

Internal Boundaries.—The forests are cut up into half-mile squares by rides 20 feet wide. Five miles of new lines were cut during the year free of cost. Two thousand eight hundred and seventy-five miles of previously cut rides were kept clear by free labour. If paid for, this work would cost Rs. 5,750.

An area of 1,30,372 acres still remains undivided into half-mile squares. This area being mostly newly formed *kachas* will be taken in hand when the growth on them is sufficiently developed.

(3) Demarcation.

Northern Circle.

The demarcation of the outer boundary of the forests in this circle is complete except in Kolába, where 401 miles remained to be dealt with at the end of the year. During the class and 1,942 of the second class at a total cost of Rs. 1,546.

Repairs to the existing cairns and the annual white and red washing was done in all divisions at a cost of Rs. 2,754.

Besides the aobve Rs. 92 were spent on clearing demarcation lines in the Central Thána Division.

Central Circle.

A further length of reserved forest outer boundary extending to 124 miles was demarcated with cairns at a cost of Rs. 1,000; and cairns on 3,260 miles of previously demarcated boundary were repaired, painted, etc., at a cost of Rs. 1,824. The new work was distributed as follows:—

•	٠				Miles.
South Násik Division		•••		•••	81
Poona Division	544	***	•••		8
North Násik Division	***	•••	•••	•••	35
			. •		—
			Total	•••	124

The work of demarcation is being carried on as rapidly as circumstances will permit; but 857 running miles still remain to be completed, all except 4 miles of which is in the South Násik Division.

There is still great difficulty in recruiting efficient surveyors, and this will only be eliminated when the departmental training of forester-surveyors can be carried out in a Government Forest School.

Southern Circle.

. Two hundred and sixteen miles have been newly demarcated at a cost of Rs. 517 and demarcations along 870 miles repaired at a cost of 49 rupees. The average cost per mile of forest demarcation was Rs. 2-6-4 and of repairs 11 pies exclusive of establishment charges.

In Kánara Northern Division a portion of the Belgaum-Kánara boundary was cleared by a contractor who received the material in exchange for wages.

In Kánara Eastern Division 26 miles of external and 253 miles of internal boundaries were cleared without expense. In 21 villages 132-feet strips were demarcated around cultivated lands at a cost of Rs. 144. It is expected that the remaining 3 miles of boundary demarcation will be finished next season.

In Kánara Southern Division a further 10 miles of Mysore boundary on precipitous hills covered with semi-evergreen and cane jungles was ranged at a cost of Rs. 210. Betta lands in Sirsi were demarcated over an area of 181 square miles at a cost of Rs. 182. Also about 16 miles of boundary along ten compartments of the tali palm area were demarcated by blazing trees.

Beyond repairing cairns and painting stones where necessary, nothing was done under this head in Kánara Western Division. The work of clearing the Goa frontier line will be taken in hand next fair season.

Outer boundary between reserved forest and the Native States of Sángli and Kolhápur in the Belgaum Division was cleared for a width of 30 feet, and the regrowth was cleared on the original 30-feet line at a cost of Rs. 600. One hundred and thirty-one miles of outstanding demarcation work in this Division will be taken in hand on the completion of the afforestation mentioned in subsection (2) of this chapter.

Two seasons will, it is hoped, suffice to clear off the major portion of the outstanding work in Dhárwár.

Beat guards did most of the clearing work in Bijápur without any cost except Rs. 6 for the destruction of prickly pear where it was impenetrable. The cost of materials for repairing and colouring the boundary stones where necessary amounted to Rs. 18.

Sind Circle.

External boundaries.—Nineteen miles and 1,980 feet were demarcated by 266 new boundary marks in newly afforested areas; 18,787 old boundary marks on 2,070 miles and 2,517 feet of line were repaired. Expenditure nil.

(4) Forest Surveys.

Northern Circle.

No survey work was carried on during the year. Expenditure under the head "Constitution of State Forests" for the circle was:—

					Rs.
Acquisition of land	•••	***	•••	•••	162
Settlement offices		***	•••	•••	126
Demarcation new and old	•••	•••	•••	•••	4,392
				-	
			Total	***	4,680

Central Circle.

None were undertaken.

Southern Circle.

No survey was carried out in this circle by the Superintendent of forest surveys, and no surveys of importance by local officers. All surveys have been practically finished.

The total capital expenditure on all heads included in this chapter amounted to Rs. 5,468 as compared with Rs. 4,893 for the previous year. The increase is due to more lands having been acquired for forest during the year under report.

Sind Circle.

The work done by the surveyors of the Working Plans Assistant in the Jerruck and Hyderabad Divisions is tabulated below:—

Division.			River course surveyed.		Forest bound- aries surveyed and checked.		Levelling of bunds and drainage projects.		Measurement of compart ment lines.		Number of tracings prepared.	Number of coupes marked.
Jerruck Hyderabad	***	- 41	116	Chains.	Miles. 91 10	Chains. 45 16	Miles, C	30	Miles. 651 57	Chains. 43 67	71 of all Divisions.	6
	Total	•==	116	22	101	61	12	80	709	30	71	6

The survey of the river frontage and the marking of coupes was carried out as usual by Range Forest Officers, the number of miles of river frontage surveyed being 146 and that of coupes demarcated and laid out was 182.

CHAPTER II.

MANAGEMENT OF STATE FORESTS.

1.—REGULATION OF MANAGEMENT.

(a) Preparation and Control of Regular Working Plans.

Northern Circle.

The working plan for the North Dángs mentioned in last year's roport Form No. 11. has been submitted to Government for sanction.

A working plan for an area of 230 square miles in South Dángs of the Surat Division has been taken in hand by the Divisional Forest Officer. Two hundred and sixty-seven square miles in the same division still remain to be brought under a working plan.

Mr. W. C. Milne, who took charge of the Working Plans Office on the 30th January 1914, has been entrusted with work in connection with the revision of the working plans of Bhivandi and Bassein Ranges.

Four hundered and forty-four coupes were laid out by the surveyors during the year, of which 390 were sold and 54 remained unsold partly on account of inaccessibility. In Talasari Mahál in the North Thána Division the coupes of blocks I to IV could not be exploited as there is no road.

No plan will lapse within the next three years.

Central Circle.

A revised working plan for the Anjan forests of the Dhulia and Pimpalner Ranges in West Khándesh Division was submitted and received the sanction of Government after the close of the year. A revised working plan for the Sátmála reserved forests of the Chálisgaon Range, East Khándesh, was drawn up and submitted to the Conservator by the Divisional Forest Officer, Working Plans, but did not meet with the Conservator's approval. It has since been amended and re-written and will be submitted to Government early in 1914-15.

In Poona the transfer of some of the reserved forests of the division, included in sanctioned working plans in force, to the management of the Revenue Department has rendered the revision of the plans necessary. The area transferred contains some entire blocks and portions of other blocks, thus disturbing the felling lists. This revision of the plans will give an opportunity of getting the grazing arrangements brought into line with the recommendations of the Grazing Commission. The data necessary for the revised working plans have been collected.

Other work done in connection with working plans was as follows:—

Detailed inspection of—(1) The sub-ghát teak and mixed forests of the Ulhas valley at Khandála in the Lonávla Range, and those at Kondával in the Ambegaon Range of the Poona Division;

(2) The teak villages in the Haveli, Mulshi and Máwal Ranges and the evergreen forests of the Mulshi Range;

(3) The sub-ghat teak and mixed forests of Anjanwale and Ghatgar of the Junnar Range.

Data of (1), (2) and (3) have been collected for including the teak forests in the existing teak working plans of the Poona Division; a separate plan is being drawn up for the evergreen forests of Mulshi Range.

(4) The checking of the coupe demarcation work done by the working plan surveyors in the Khed and Ambegaon Ranges of the Poona Division and in the Málegaon, Báglan and Kalwan Ranges of the North Násik Division was performed by the Divisional Forest Officer, Working Plans.

Exploitation under the teak working plan of the Jámner Range (East Khándesh), as modified to work out the dead and dying teak affected by drought, was completed during the year; and as no exploitable trees now remain the Conservator has suspended the further working of these forests.

In the Edlabad Range (East Khándesh) the Transpurna babul working plan, which had been submitted, being disapproved, is under revision.

The working plans for the Sátpura reserved forests (East Khándesh) have proved unsuitable to the present conditions, though exploitations have continued to be made in a very modified form. These plans, being for the most extensive and important forests in the division, are in urgent need of revision; and the work will be undertaken as soon as an Imperial Forest Officer can be spared for the work.

The West Khandesh Division is as a whole very badly supplied with working plans. Thus out of a total area of 542 square miles of forest proper, only 169 square miles are at present under working plans. Of the remaining 373 square miles, a certain amount consists of thorn and scrub jungle mainly situated in the Sákri Range, the systematic working of which is neither particularly urgent nor desirable. On the other hand, there are large areas in Pimpalner and West Sákri Ranges containing a fair proportion of saleable teak. The same may also be said of the forests along the ghats in the South Nandurbar Range, but in this case the preparation of working plans must be delayed until the further afforestation scheme for Nandurbár and Nawápur Ranges, now before Govern-The forests of Nawapur Range also contain very ment, receives final sanction. valuable timber, a certain amount of which is aleady over-mature. The question of working these forests is complicated by the fact that there are large quantities of timber outside forest, in malki numbers and revenue waste, which are being exploited annually. The labour required is already more than the resources of the district can supply, and contractors are compelled to work to some extent with imported labour. Under these circumstances systematic working of these forests cannot be undertaken in addition to the fellings now taking place outside. The matter of the preparation of working plans for the above forests is receiving the attention of the Conservator.

All the forests in the North Khandesh Division except those in the Akrani Range are organized under regular working plans, but owing to the lack of demand for inferior species large numbers of trees not intended for reservation are left unfelled in the coupes by the contractors. This is not in accordance with the working plans, but if the Forest Department insisted upon contractors removing all unreserved material the prices of the coupes would sink considerably. When a market can be found for such material the prescriptions of the working plans can be worked up to and the prices of the coupes will be enhanced. The working plans which were brought into force about 15 years ago are in need of revision similarly to those of the Satpura forests. The Akrani Range, comprising 304 square miles, is not under a working plan, nor owing to their present inaccessibility is it considered necessary to make one at present. When the Akrani is joined by a good road to the plains below, the forests should be organized, as they contain good teak. The scheme which was sanctioned in June 1913 for regulating the free extraction of fuel, etc., from the revenue lands has been brought into operation and is dealt with in Chapter IV under "Administration".

In North Násik out of 92 compartments that were laid out only 59 could be sold. The attempts to dispose off the remainder failed as the growth in the forests is very poor and as the demand for firewood in their vicinity is very limited. The unsold compartments were allowed to remain as they were, the cost of their expoitation departmentally being prohibitive and the demand for firewood being practically nil.

Southern Circle.

Preparation.—In Kánara Northern Division the high forest plans for blocks VII, IX and XX and the teak pole—copice with standards—plan for block VII-A are being revised. In Kánara Eastern Division a newly afforested

area of 17 acres was added; the Yellápur high forest plan for which statistics were collected is not yet written. In Kánara Southern Division, the Sirsi town plan on the coppice with standard system, covering an area of 13 square miles, was sanctioned by Government during the year. The Yekkambi high forest plan is in the press. The Honávar-Bhatkal fuel plan is held back pending arrangements for supply to Kumta town being worked out, as it was found that those under the plan as it stands were not convenient and contractors could not be got to undertake operations at rates which would pay. Parts of the area are, however, being worked in anticipation. The Gokák working plan and the revised plan for series XIX have been received in this office since the close of the year and are under discussion. The plan for the Kalghatgi, Bankápur and Hangal forests of Dhárwár has been drawn up and is under consideration.

Control.—Due to scarcity and steady increase in cost of labour and transport the prescriptions of the high forest plans and the Supa fuel plan are behind hand some two years, others even longer. There has, however, been no difficulty in selling the coupes of the Haliyal teak pole area but the minimum number of standards to be retained had to be reduced in some cases from 24 to The exploitation of the areas as prescribed by the Yellapur above-ghat and Mundgod high forest plans is also behindhand, but from the way the work was done during the last two years things are picking up and gradual progress is being made towards normality. There being no demand for the produce of four coupes as prescribed by the Sirsi town plan in Southern Division Kánara, only two blocks were worked. The provisions of plans in force in Kánara Western Division were worked up to with better results than in other divisions of Kánara. The only deviation was that fewer jungle wood trees (other than Matti and Nandi) were exploited than prescribed, as the yield of such is far in excess of the demand. The Belgaum Division plans are mostly up to date without any material deviations having taken place. The provisions of the Dhárwár pole area plan were carried out as usual with few variations.

Sind Circle.

Except new kachas and recent reservations, all forests in Sind are under regular working plans. The prescriptions of the plans were adhered to with the following exceptions:—

Sukkur Division.—Some burnt areas and areas threatened with erosion were exploited in addition to the coupes prescribed under the sanctioned working plans.

Lárkána Division.—Prescribed coupes according to the sanctioned working plans were exploited with some deadwood as well.

Hyderabad and Jerruck Divisions.—Deadwood was sold in addition to prescribed coupes.

A separate Working Plan Officer in Sind was sanctioned by Government in their Resolution No. 1151, dated 25th November 1911, but as Government in their Resolution No. 10721, dated 23rd November 1912, made no mention of a Working Plans Division proper, a proposal was submitted through the Commissioner in Sind to continue the Working Plans Division in Sind in a modified form, as stated in Government Resolution No. 7084, of 30th July 1913, by which the Working Plans Officer was appointed as Assistant to the Divisional Forest Officer of the Division in which he was working and was termed the Working Plans Assistant of that Division. This office was attached during the year to the Jerruck Division to revise the working plans of that Division; the field work was completed during the working season and the revised working plan report will be ready for sumbission by the end of the current recess season.

(b) Preliminary Working Plan Reports.

Northern Circle.

A preliminary working plan for the South Dangs forests, Surat Division, for an area of 230 square miles prepared by the Divisional Forest Officer was approved by the Conservator.

Central Circle

Nil, beyond what has already been recorded.

Southern Circle.

No such reports were submitted. The plans contemplated for the Belgaum Division and which were referred to in the last year's report are in various stages of preparation.

Sind Circle.

Nil.

(c)-Plans of Operations.

Northern Circle.

These were submitted by all the Divisional Forest Officers and were worked upto, except in a few cases of minor importance.

Central Circle.

These were drawn up in all divisions and submitted through the Collectors. The works which were provided for were generally carried out, and in addition to the sanctioned allotments under A—Conservancy and Works, full use was made of a subvention grant of Rs. 19,500 which was given late in the year by Government for expenditure on roads and buildings.

· Southern Circle.

These were adhered to as far as possible except as detailed under working plans above.

Sind Circle.

Plans of operations were submitted for each division and sanctioned; these were carried out with minor and unimportant changes.

2.—Communications and Buildings.

(a)-Roads and Bridges.

Northern Circle-

Rs. 14,230 were spent during the year on roads, including repairs, compared with Rs. 13,002 spent during the previous year.

In the Surat Division a lot of useful road construction work has been economically carried out by Mr. Marjoribanks. A revised 5-year programme for the Dáng roads was sanctioned under Government Resolution No. 5390, dated 10th June 1914.

There is scope for road work in the Thána divisions, and the roads in this district should be gradually and economically developed by the forest officers themselves. This work should not be handed over to the Public Works Department as hitherto in Thána District.

Surat, North Dángs.—The Chikli-Bardipada road was completed, the cost for $1\frac{3}{4}$ miles being Rs. 732.

Central Dángs.—The Kalam-Vihir-Chinchli road was completed. The expenditure incurred for $5\frac{1}{2}$ miles was Rs. 1,744. A new road from Borkhal to Holbari was taken in hand, $\frac{3}{4}$ miles being constructed for Rs. 404. On the old Ahwa-Galkund road an impossibly steep part was abandoned and an entirely new section $1\frac{3}{4}$ miles long on the Awlimal-ghat was aligned and constructed in its place for Rs. 365,

South Dángs.—Seven miles of the Málegoan-Zaria road and $2\frac{1}{2}$ miles of the new Galkund-Pandwa road were completed, respectively, for Rs. 4,117 and Rs. 479.

Central Thána.—The Mangrul road was completed, the cost incurred for 2 furlongs being Rs. 250. The Osarwira-Ghodpada road in the Mokhada Range was begun and 1 mile of it was constructed for Rs. 1,777. Besides the above, cart-tracks were constructed, as necessity arose, for Rs. 637.

Kolába.—The remaining portion of the Kondvi-Diwanmal road, viz. 1 mile 1 furlong 275 feet, was completed at a cost of Rs. 575.

Repairs were carried out at a cost of Rs. 3,149 in all the divisions.

Central Circle.

The following new road work was carried out during the year:—

Name of road,		Division.	Lengt	Cost.			
Hisala-Bohiti Wasardi-Bhurki	100	***	North Khándesh		M. 3 3	F. 0 4	Rs. 1,245 1,725
Mhaismal Deola Mehenduri Sharank Chinchohal	hel	***	South Násik	••	{ 6 . 0 . 0 . 0 . 0 . 0 . 0 . 0 . 0 . 0 .	0 4 4	686 338 1,024
Vang valley road Koina valley	***	•••	} Sátára	••	. { 2 0	3 5	1,243 762
			Tota	1	. 16	4	7,023

Rs. 11,905 were spent on repairs to existing roads and cart-tracks.

Interesting details of the nature and extent of the work done are as follows:—

West Khándesh.—No new roads or bridges were constructed, but the following roads were repaired:—

Clost

·	V	QU.		
	Rs.	8.	p.	
(1) Kalambari road in Pimpalner—widening, smoothing surface, removing rocks, etc.	0 27	15	0	
(2) Charanmal-Borzar road in Nawapur—repairing surface, cleaning gutters, rebuilding the retaining	•			
wall with pucca masonry, repairing bridge and culverts (3) Lalling road in Dhulia—repairing surface and clear-	1,871	7	0	
ing gutters so surface and clear-	120	0	0	

North Khándesh:—There are no metalled forest roads, but two old fairweather cart-tracks are being realigned and improved; work on the Wasardi-Bhurki road (Shirpur-West) was commenced in 1912-13, and continued in 1913-14 when Rs. 1,725 were spent on the work. Cutting and levelling is now more or less complete and the spreading of murum has been commenced. Work on the Hisala-Bhoiti road (Shirpur-East) was commenced this year, and 3 miles were cut, levelled and lightly spread with murum, at a cost of Rs. 1,245.

Eighty-seven miles of footpaths were repaired and some widened with a view to converting them gradually into cart-tracks, at a cost of Rs. 1,355.

Poona.—The portion of the bridle path in Lonávla has been widened, and has become more practicable to pack animals than before. The repairs have added to the convenience of people living in the neighbourhood. A porsion of this bridle road between Vandra and Kusur was found to have been used also for cart traffic.

A small bridge at a cost of Rs. 150 was constructed over the nalla running between the newly built forest post of Kusur and the bridle path.

Sátára.—The further construction of the Vang valley road was continued, the length added during the year being 2 miles and $3\frac{1}{2}$ furlongs. The road now extends to 18 miles and 3 furlongs, and is of considerable advantage to the people, especially for the passage of carts loaded with groundnuts, which are extensively grown. Since this road has been made timber coupes in the Patan Range have fetched higher prices from contractors, and coupes in the more inaccessible parts of the valley have been opened out to exploitation.

The Koina valley road was extended by $5\frac{1}{2}$ furlongs only. This road is difficult to construct and had suffered considerable damage during the rains which are here heavy in the monsoon months. The Irish bridges and culverts of dry masonry undertaken during the previous year were washed away, and had to be constructed afresh. The more expensive prepared stones were found to be of no advantage, and this year therefore only undressed "khandkis" and rubble were used in such works, and they were made stronger and have stood the heavy rains which have fallen in the valley in the present monsoon season.

South Násik.—The forests in North and South Peint are not sufficiently accessible for the extraction of timber for which the demand is increasing yearly. As dealers from outside the district, e. g. Gujarát and Mokháda, are coming in to take contracts, it is time to have the tracts opened out for trade not only in the interest of these forests but to improve the condition of the backward inhabitants of this part of the district. During the year under report some progress has been made and a new road in North Peint from Mahismal to Deola was commenced and earthwork completed for over 6 miles. A road in South Peint at Chinchohol was also completed.

Southern Circle.

The following figures compare the outlay on works under this head:-

				1912-[13,	1913-14.
			•	Rs.	${ m Rs.}$
Roads and brid	lges	•••	•••	42,737	45,396
Buildings	•••		•••	21,833	27,824
Other works	***	741	***	2, 588	3,708

The increase under all heads is due to special grants for the repairs of roads handed over to the Forest Department by Local Boards and a larger number of buildings and wells constructed during the year.

(a) Roads and Bridges.—The important works of a permanent nature carried out were:—

Northern Division, Kánara.—Shiroli-Chulchulpani road 5 miles, Ambgaon-Shiroli road 1 mile, Hudsa-Jaida road 4 miles, road from compartment 23 to Dandeli 1 mile. All these are not completed yet. A railway line from Bhistanhatti station to Kumbarkop has been surveyed; 69 miles of existing roads were repaired.

Kánara, Eastern Division.—Davgi-Nullah-Wantmane road 6 miles, Katur-Bomnalli road and Gunjawati-Kurli road 9 miles, cycle paths 17 miles and 2 bridges on Ganeshkatta and Bilki Manchikeri roads and 35 miles of existing roads repaired.

Kánara, Southern Division.—Chittar-Hadikal road $1\frac{1}{2}$ miles, Allanki bungalow road and 4 miles of old roads repaired.

Kánara, Western Division.—The Kadra-Sulgeri road was extended by $2\frac{3}{4}$ miles, Hattikeri-Gule road $3\frac{1}{2}$ miles completed. The existing old roads were repaired.

Belgaum.—Five pucca masonry bridges were constructed and 76 miles of existing roads were repaired.

hárwár.—Eleven miles of existing roads were repaired.

Sind Circle

There are no works under this head in the circle; the 20 feet rides which cut up the forest into half mile squares are available as roads and used as such.

(b).—Buildings.

Northern Circle.

Expenditure on account of new buildings was:-

				$\mathbf{R}\mathbf{s}$.
Divisional Forest Office at Godhr	a	•••	***	4,999
Police lines at Ahwa	•••	•••	•••	1,570
House for sweepers at Godhra	***	***	•••	272

		Total	***	30,256
Repairs in all divisions	•••	•••	•••	3,751
	•			

Central Circle.

The expenditure on new buildings was Rs. 29,311. An abstract of the work done is as under:—

					Rs.
Forest depôts	***	•••	***	***	7,552
17. Forest guards' posts	***	•••	***		17,049
Raugers' quarters at	Taloda in	North Khán	desh	•••	1,574
Stables at Dhadgaon	in North	Khandesh	•••	,	250
Chawdi in North Kh	andesh	***	***	***	33
On part construction	of depôts	•••	***	•••	969
On part construction	of forest	guards' posts	5	•••	1,884
					29,311

In addition to the above Rs. 3,200 were spent on the repairs to existing buildings, making a total expenditure under this head of Rs. 32,511.

Some details of works done in the several divisions are as follows:—

West K	hánde	es h-				Rs.
	(1)	Depôt building at Dhulia ·	•••	***	***	1,598
		Depôt building at Lakadkot	***	•••	***	400
	(3)	Remaining part amount paid for building at Khoksa in Nawapu	or four-roomed ir •	l guards'	pucca	150
	(4)	Part amount of three-roomed in Nandurbar Range		ng at Kl	olvihir	700
	(5)	Part payment of Dangshirwada Range	depôt buildin	g in Pin	npalner	569
	(6)	Forest guard's post at Nanchha	d in Nawapur	Range	•••	60 0
· ·						4,017

Rs. 560 were spent on repair to existing buildings.

In addition, works were done by the Public Works Department during the year at a cost of Rs. 3,336.

North Khándesh-

New quarters for forest guards were built in accordance with sanctioned plans as under:—

Range.	Post.	Expenditure.
(1) Akrani (2) Sháháda (3) Shirpur, East (4) Shirpur, West (5) Taloda	 Dhadgaon Aslod Hisala Sangvi and Boradi Kothat Pimparda Borad and Taloda	 5,958

The existing bungalows, guards' quarters and depôts were repaired at a cost of Rs. 432.

The Public Works Department during the year carried out works and repairs to the amount of Rs. 2,520.

Poona.—Three new forest guards' posts were constructed through the agency of contractors, one in the Junnar Range and two in the Mawal Range, at a total cost of Rs. 2,677 as shown below:—

	Range.	Name of village where guard's post is built.		Name of village where Expenditure guard's post is built. incurred.		Remarks.	
Junnar Mawal Do.		Wanewadi Wahagaon Kusur	***	900 0 0	Rs. 2 out of this paid for conveyance of wood.		

The increase over the usual cost in the case of all the three buildings is due to the fact that teak timber for construction, lime, etc., had to be brought from long distances; and as the places are situated in the regions of heavy rainfall galvanized iron sheets had to be used for roofing purposes instead of tiles.

Southern Circle.

In Kanara, Northern Division, the Kalamkhand rest-house and Amgaon forest naka were completed though the full expenditure has not been charged with in the year.

In Kánara, Eastern Division, the rest-house at Katur and naka houses at Choudalli and Hirehalli were commenced. The guards' houses at Kangod, Indur, and Hutkhand and Bashanki were finished.

The rest-house at Allanki in Kánara, Southern Division, was completed.

In Kánara, Western Division, the rest-house at Ramanguli was completed and two more at Santgal and Pattanpur were commenced. The naka houses at Sulgeri, Kádwád and Manáki, the combined depôt office and quarters at Hattikeri, and ceiling to the Kumta range office rooms were finished. Office and quarters for the Range Officer, Kadra, and a naka house at Marakal have been commenced.

In Belgaum, rest-houses at Jámboti and Shiroli, range offices and quarters at Jámboti, Kanápur, Merde, Pátne and Gujnal, and guards' houses at Kankumbi, Rumewádi, Gunji, Hemadge, Pátne, Jámboti, Chunchewádi and Bhuránki were completed.

The progress in roads and buildings is satisfactory; still much remains to be done. Unless good roads and rest-houses are provided and the subordinates are well housed, proper inspection, protection and working of the forests is almost impossible. Expenditure invested on such works is sure to repay itself in a few years time. With due regard to progress and improved efficiency of working it is not possible to advocate any serious curtailment of expenditure under either of these important heads.

Sind Circle.

The cost of new buildings was Rs. 8,889 as under:-

					${ m Rs.}$

Central Circle.

Rs. 267 were spent on the construction and improvement of wells and Rs. 53 on improvement of camping grounds in the Sátára Division.

Southern Circle.

New wells were sunk at Kesrodga (Northern Division, Kánara), Binghe and Kodibág (Western Division, Kánara), Patne, Kamatge, Katgali, Shiroli and Bailur (Belgaum). Eleven tanks were deepened in Eastern Division, Kánara. Old wells were repaired in all divisions. Two naka houses in Dhárwár Division were newly wire-fenced. The telephone connections in Yellápur-Kirvatti and Távargatti-Dandeli which were most useful, and which saved delays in many urgent matters, were maintained.

Sind Circle.

The usual minor irrigation works were carried out by forest officials. These cost for new works Rs. 2,750; repairs to existing works cost Rs. 4,642; total cost under this head comes to Rs. 7,392.

The following sluices for the irrigation of forests were constructed by the Public Works Department and debited to their budget:—

	Ks,	8.	р.

Total of 1912-13	41	178	80	12	32	1,680	1,822	202	288	911	7	- a			1,165	847	4,926
Average of the past three jears.	52	204	50	11	41	1,578	1,250	229	833	995	9	10			1,309	250	4,769

The total number of offences shows an increase of 220 over the last year and of 167 over the average of the past three years.

Fires show an increase of 108 cases over last year and of 41 over the average of the past three years. This increase is shared chiefly by Panch Maháls, South Thána and Kolába.

The increase in the cases of unauthorized felling, i.e., 181 over the last year, is chiefly confined to the southern ranges of Kolába, where a few distant rounds received a thorough stirring up which made the establishment report offences which were formerly neglected or connived at. In Central Dangs too, of the Surát Division, breaches of táhal rules account for a certain increase.

Grazing offences show a decrease of 194 and 144 cases compared with those of last year and the average of the past three years. This decrease is chiefly due to the more liberal and practical grazing arrangements sanctioned by Government in Government Resolution No. 9441 of 16th October 1913.

Other offences.—The increase of 125 cases over last year and of 97 over the average of the past three years is more or less spread over all the divisions, but is chiefly noticed in Kolába where the surveyors working on demarcation in the south brought to light encroachments on forest lands of 10 to 20 years' standing.

The results of prosecutions compare as follows:-

	,		1913-	1914.	1912-	1913.	Percentage of acquittals.		
Divis	ion.		Convic-	Acquit- tals.	Convic-	Acquit-	1913-14.	1912-13	
Panch Maháls Surat North Thána Central Thána South Thána Kolába	•••	1 · · · · · · · · · · · · · · · · · · ·	21 85 10 18 24 181	1 1 8 12	17 14 14 20 49 106	1 1 8 4 19	4·5 5·2 25·0 6·2	5.5 6.6 28.6 7.5 15.2	
. .	Total	•••	289	22	220	83	7.07	13.0	

The percentage of acquittals was satisfactory in all the divisions except South Thana where it rose from 7.5 in the previous year to 25 during the year under report. This result in South Thana Division is not consistent with the Divisional Forest Officer's explanation for the decrease (by 21) of cases prosecuted, viz., that he sanctioned prosecutions only in cases in which there was strong evidence.

The total number of compounded cases increased from 3,225 to 3,257.

Undetected cases increased from 1,212 to 1,363.

Communal punishment for breaches of forest laws was inflicted as shown below:—

Rewards for good forest protection were given as follows:-

Kolába.—Wajapur, Patansi, Nadoli, Girne, Kalose, Kachale and Parwadi.—Full remission of grazing fees for one year.

Measures to improve supply of fuel and rab and thus to reduce offences of unauthorized felling.

Tahal supply.—Practical demonstrations by revenue and forest officers to villagers for the proper utilization of their tahal supply in gurcharan, malki, woodlands and open forests were given with, it is reported, good results. Wherever the people attend to the tahal cutting rules the beneficial results to the tree growth are at once obvious. Unfortunately, to save themselves from trouble, the people drift back to their old ways of hacking and ruining the young growth.

Repeated breaches of the rules were dealt with by infliction of communal punishments and their continued proper observance by rewards in several ways. In Kolába, as a further educative measure, an essay on the formation and tending of woods was read at each of the annual agricultural exhibitions by Mr. M. B. Gumaste, a clerk in the Divisional Office, and the Divisional Forest Officer reports that the interest taken in it was so great that people asked for the publication of the essay in a pamphlet form. This was done, and printed copies supplied to all applicants.

Fuel.—A certain number of coupes were sold in Kolába and North Thána with special terms for the supply of reasonably cheap fuel and small timber for agricultural implements in a set number of jungle and town depôts, for local use. But it is reported that this measure has not benefited the forest to any appreciable extent. Steps have therefore been taken in Kolába to enforce the orders contained in Government Resolution No. 8416 of 30th September 1913, Revenue Department, by issuing to villagers printed notices warning them that in case their conduct with regard to forest protection did not improve, the Collector would be approached in view to his abolishing their privileges and recording the order in the Government Gazette.

Central Circle.

The following table gives the number of offences reported during the year as compared with those of 1912-13 and of the past three years.

Whilst, as compared with the previous year, there was a decrease of 687 cases under unauthorised fellings, illicit grazing and other offences, there was a regrettable increase of 362 cases under injury to forest by fire. The reason for this was that whilst the quantity of grass in the forests was greater than in 1912-13, the demand for it was less thus doubly enhancing the danger from fire.

The number of prosecutions instituted in offence cases was 445 as against 369 in 1912-13. The rise in the number of prosecutions was accompanied by a rise in the percentage of convictions, which reached 95.3 per cent. The majority of the prosecutions instituted were for offences of injury to forest by fire, and of grazing cattle in closed forests.

As compared with 1912-13 the number of cases compounded under section 67 of the Indian Forest Act decreased from 6,646 to 6,204; but the amount taken in compensation increased from Rs. 33,301 to Rs. 35,717, the average per case being Rs. 5-12-0 in 1913-14 and Rs. 5-0-2 in 1912-13. The main reason for this increase lay in the number of forest fire offences which were compounded and in which substantial sums were taken from offenders.

In 481 cases, as against 688 in the previous year, offenders were let off with a warning. In 488 cases as against 940 cases in the previous year, no offenders could be traced.

Regarding crime in the different forest divisions the following details are of interest:—

East Khándesh.—"The total number of offences is about 10 per cent. below that of the average of the last three years."

West Khandesh.—"The number of cases compounded under section 67 of the Forest Act was 753 and the amount of compensation recovered was Rs. 6,431. In 1912-13 the corresponding figures were 651 and Rs. 3,622. For this increase certain illicit cuttings of timber in Nandurbar and Nawapur are largely responsible. In addition, the amounts recovered for illicit stripping of anjan leaves and for illicit grazing are both larger than during the previous year."

North Khandesh.—" The total number of offences of all kinds reported was 556, as compared with 855 of the previous year and an average of 691 for the 3 preceding years. The decline in the number of offences in 1913-14 is almost entirely due to treating breaches of rules relating to the exchange of permits for transit passes (under section 41, Indian Forest Act) merely as such, and not entering them as offences under the heading "Other Offences" (form 13) as was formerly done."

Poona—"The percentage of failure was 2.78 only as against 14.7 of the previous year. The punishments inflicted were more deterrent than in the previous year. This satisfactory result in the manner in which forest cases taken to Court have been disposed of, seems due to the recent orders of the District Magistrate. In addition to the above offences taken to Court by the Forest Department, two offences reported from the forests in charge of the Revenue Department in the Sirur Taluka (Dhond Range) were taken to the Court and convictions obtained.

South Násik.—" The chief reason why the number of offences under illicit cutting is so great lies in the fact that the want of fuel is keenly felt everywhere in the district. There are very few trees now left in malki numbers, since all the malki holdings have been cleared of trees and most of them are being cultivated. The supply of fuel decreases year by year whilst the demand for it is increasing and the unforfunate result of this state of affairs is the looting of forests. Punitive measures were resorted to in the case of 55 habitually offending villages in Násik and 13 in Ahmednagar by imposing double grazing fees. In 20 other villages in Násik and 15 in Ahmednagar, only warnings were given this year through the Collector. (Part of the Ahmednagar District is attached to the South Násik Division.)

In 39 villages in the Igatpuri Range the privilege of collecting dead and fallen wood, which had been suspended in 1912-13, was continued under suspension sion during this year also, since it leads to the illicit manufacture of dead wood; but it had little effect. There is very large consumption of firewood in the Igatpuri town itself, and also in the village of Ghoti, and the supply for these two villages is brought from the neighbouring Government forests. With a view to checking theft by meeting the demand for fuel during 1914-15, it is proposed to establish Government fuel depôts at these two villages, and also one at Trimbak. If a supply of fuel at reasonable rates is made, the illegal supply of illicitly cut material from the Government forests may be checked. Unfortunately the condition of the forests of the range is not such as to permit of an extensive supply of fuel being obtained within a distance from the depôts which will permit of the operations being remunerative."

Southern Circle.

The following statement shows the number and classification of forest offences compared with those of 1912-13 as well as with the average of the past 3 years:—

	Ta	ken into (Court.		Compound	led.		Undetect	ed.	Total.			
Nature of offence.	1913-14.	1912-13.	Average of past 3 years.	1913-14.	1912-13.	Average of past 3 years.	1913-14.	1912-13.	Average of past 3 years.	1913-14.	1912-18	Average of past 3 years.	
I.—Injury by fire	29	23	22	114	61	62	719	4 78	715	862	552	799	
II.—U nauthorized fellings	400	174	177	2,836	2,465	2,116	511	536	483	3,507	9,175	2,778	
III.—Unauthorized grazing	51	55	52	1,211	1,510	968	. 13	11	Б	1,275	1,576	1,025	
IV.—Other offences	11	16	20	376	911	224	11	12	7	398	839	251	
Total	251	268	271	4,537	4,337	3,372	1,254	1,037	1,210	6,042	5,642	4,853	

The total number of cases for the year under report were thus in excess of those for the preceeding year, as also of the average for the preceeding 3 years, by 400 and 1189 respectively.

There is an increase in the number of fire offences reported for which Kanára, Belgaum and Dhárwár are responsible. It is attributed to the unusually long dry season of the year.

Under "Unauthorised fellings" the increase is noticeable in Kanára North and South Divisions, Bijápur and Ratnágiri, which is ascribed to greater vigilance on the part of the staff and to more systematic reporting rather than to any actual increase of cases during the year.

Under "Unauthorized grazing" the number reported is the mean between the figures of 1912-13 and the average of the 3 previous years, almost all the divisions sharing this decrease. As the pound fees did not appear to act as a deterrent and as it was a question of stopping wilful injury, Re. 1 per head was recovered in some cases under section 67 and this has led to the desired improvement.

The increase in "Other offences" is restricted to Kanára, and in general it is attributed to illicit cultivation or petty encreachments and to breaches of game rules.

The results of cases tried by Courts are compared in the following statement:—

			1913	-14.	1912	-13.	Percen acqu	tage of
Divi	ious.		Convictions	Acquittals.	Convictions.	Acquittals.	1913-14.	1912-13.

	Ţo	tal	220	49	201	57	18-2	22

The decrease in acquittals which occurs in all the divisions, except Kánara Northern and Southern, is satisfactory. The large percentage of acquittals in Kánara, Northern Division, the Divisional Forest Officer thinks, is not of much value as the number of cases involved is small. The slight increase in Southern Division, Kánara, is not serious.

There were 7 cases of poaching detected during the year, two in Kánara Eastern Division, and five in Kánara, Western Division. Six of these were taken to Court and one was compounded. Conviction was obtained in three and one resulted in acquittal, while two were pending at the close of the year.

The number of cases compounded and the fees realised were 3,955 and Rs. 20,147 respectively. The largest amounts of compensation recovered were in Belgaum and Kánara, Southern Division, where heavy and deterrent fees were imposed. Offenders in 524 cases were let off with simple warning.

The percentage of undetected offences to the total number reported was 21 against 18 in 1912-13 and 26 the average of past 3 years. The increase is due to the large number of fires that occurred in the year:

There was an increase of 445 cases as compared with cases of 1912-13 and 257 cases as compared with previous 3 years' average.

In the last year's report, offences under illicit grazing were omitted from the return for the reasons given in that report, but under Government Resolution No. 4737, dated 21st May 1914, they have been included in this year's report and in order to facilitate comparison the actual figures for illicit grazing of last year are entered in the above statement.

The number of cases compounded rose from 3,085 to 3,258 and the amount of compensation accepted from Rs. 5,731 to 6,576, the average per case being Rs. 2-0-4 as against Rs. 1-13-9. The increase in the number of cases is small in the Jerruck and Lárkána divisions, but is very noticeable in the Sukkur and Hyderabad divisions where the Divisional Forest Officers took special care to see that all offences whether big or small were reported; many cases being detected by the Divisional Forest Officers themselves.

In 105 cases the offenders were let off with a warning as against 56 in the previous year, while the number of undetected cases rose from 250 in the previous year to 477 during the year under report, due to greater insistence on the part of the Divisional Forest Officers in having undetected offences reported and registered.

The offences taken to Court during the year were 104, 50 being pending from last year. Thus out of a total of 154 cases 127 were decided during the year and 27 remained pending at the end of the year. The 127 decided cases resulted in 108 convictions and 19 acquittals; the percentage of acquittals was 15 as against 24 of last year. The Jerruck Division for the third year in succession shows no acquittals, while in the Sukkur, Lárkána and Hyderabad Divisions the percentage of acquittals is 17.2, 12.5 and 14.3 as compared with 30.4, 33.0 and 0 respectively in the previous year. In the Hyderabad Division, which alone shows an increase in the percentage of acquittals, 14 cases were sent to Court and convictions secured in 12 of them.

The number of fire cases taken to Court were 4, Sukkur Division being responsible for 1 case and the Jerruck Division for 3 cases. The case in the Sukkur Division was acquitted for want of sufficient evidence. In the Jerruck Division in one case the accused was fined Rs. 15, the other 2 cases remained pending at the end of the year.

Prosecutions for assault and obstruction of forest guards in the execution of their duty were 8 during the year as compared with 6 in the previous year; of these 7 resulted in convictions and 1 acquittal.

Under the Cattle Tresspass Act seven cases were tried by Magistrates, of which 6 were convictions and 1 acquittal.

(b) Protection from fire.

Northern Circle-

In spite of the usual measures adopted for the protection of forests from fire, the result turned out to be unsatisfactory, the only redeeming feature being a decrease of 797 acres in the area burnt from the closed forest.

The following statement required by Government Resolution No. 248 of 12th January 1904 shows the area protected:—

	- 1-1 f4	Extent of		,	Exte	nt of forest	burnt.
Division.	Total forest area of the division in charge of the Forest department.	valuable forest for which con- tinuous pro- tection from fire is desirable.	Proportion of valuable forest which has been continuously protected from fire for 4 years.	noturollic	Open forest.	Closed forest.	Total.

Per cent. 168,198 or 79.2 461,773 or 99.6 202,797 or 94.7 213,203 or 90.7 186,401 or 89.4 261,768 or 99.0	Acres. 2,128 1,500 4 356 5,553	Acres. 8,881 1,730 1,372 3,337 4,057 935	Acres. 4,380 1,583 2,793 1,431 79	Acres 13,261 1,730 2,905 6,130 5,483 1,014
Total, 1913-14	1,617,034	1,507,432	1,494,140 or 93.5	13,537	20,312	10,216	30,528
Total, 1912-13	1,617,051	1,604,539	1,519,784 or 94.7	13,537	13,796	11,013	24,803

The area protected and the number and origin of fires are shown in forms Nos. 14 and 15.

Out of the 467 cases of injury to forests by fire, 65 were prosecuted, 52 compounded, and in 350 offenders were not detected.

Out of the 65 cases prosecuted, in 57 cases conviction was obtained, 2 resulted in acquittal and 6 remained undecided at the close of the year.

The number of cases reported show an increase of 108 over last year's result. The divisions chiefly responsible for this increase are Panch Maháls, South Thána and Kolába.

In the former division a surplus of fodder in the forests probably made the people careless about burning it. In Kolába the increase in the number of fires reported need not disturb one. The total area burnt was small and the people were quick to turn out to extinguish fires.

In South Thana Division the fire protection work was not satisfactory. The Conservator when touring in June found that extensive areas burnt over had not been reported as burnt. Consequently the extent of the forest burnt as shown in the returns is less than the actual.

Central Circle.

There was a serious set back in fire protection of forests during the year under report. The number of fire cases rose from 220 in the previous year to 582, and the total area burnt during the year was 142,268 acres as against 38,288 acres in 1912-13.

Details of the origin of fires which occurred are given in the Appendix in form No. 15.

The following statement shows the progress made in fire protection during the last 7 years:—

	Total forest area of the	Extent of valuable forest for	Proportion of valuable	Extent of	Extent of	forest burn the year.	during
Division.	division in charge of the department.	which con- tinuous pro- tection from fire is desirable.	forest which has been continuously protected from fire for 7 years.	naturally immune from fire.	Open forest.	Closed forest.	Total.

Per ceut. 130,377 or 36.4 Nil. Nil. 442,583 or 98.5 185,466 or 77.9 102,654 or 80.7 215,933 or 94.	Acres. 65,920 101,752 100,569	Acres. 35,378 21,972 3,969 374 2,795 931 449 65,863	Acres. 19,075 4,899 46,654 261 1,764 2,952 800	Acres. 54,448 26,871 50,623 635 4,559 3,883 1,249

The amount spent on protective measures was Rs. 20,011 as against Rs. 18,545. The measures taken were the same as those which have been explained in previous years.

The reason for the increase in the number and extent of fires in the year under report will be found in the following remarks of Divisional Forest Officers:—

East Khandesh.—There were 97 fires, burning 54,448 acres as compared with 35 fires burning 12,649 acres in the last year, and 62 fires burning 28,819 acres as the average of the last three years. But the last year was exceptional, both owing to the large amount of grass extracted for famine fodder and owing to the exceptional showers during the dry season. It is therefore fairer to compare the past season's results with the average results of the three years 1909 to 1912. In this period the average number of fires was 79, and the average extent of forest burnt was 44,838.

Although the three Satpura ranges contributed only 4 of the additional fires, the excess area burnt in them was 17,390 acres or nearly twice the excess area burnt in the district as a whole, the seven other ranges although

accounting for 13 extra fires having only 6,038 acres burnt or less than half the average. It is regrettable that the serious increase in area burnt in the Satpuras is coincident with great slackness in general inspection and control in those ranges. Chopda had eight fires burning 9,535 acres while fire-tracing; and one case specially inquired into showed a lamentable negligence by all concerned. Similarly Yawal had three fires burning 6,400 acres while fire-tracing. Raver has a fair smaller area burnt owing to greater accessibility, less inflammable material, and far fewer permit holders; but the area burnt was twice the average. In one case great negligence was shown. Generally, it is impossible not to feel convinced that far better results would be obtained if general inspection and control by Rangers were moderately good. Attention is being devoted to secure improvement.

West Khándesh.—The total number of fire cases for the year was 101 involving 26,872 acres; for the previous year the figures were 47 involving 12,959 acres. The year 1912-13 was exceptional, as owing to the poor rainfall, the forests were subject to intense grazing and also large quantities of grass were cut and removed; therefore the danger of fire was greatly lessened. In comparison with 1911-12, which was a more normal year in respect of rainfall, the results of 1913-14 appear better, for although the number of fires, 101, is greater than the number, 61, of that year, yet the area burnt is considerably less, dropping from 43,934 acres to 26,872 acres. The average area burned by each fire was 720 acres in 1911-12, 275 in 1912-13, and 266 in the year under report.

The increase is probably due to the fact that the good rains provided plenty of grass for grazing outside the forest, and small demands were made on the forest proper either for grazing or for cut grass. The forests were therefore always full of dry grass and in a very inflammable condition.

It is disappointing to note that several villages in Nawapur to whom free grants of wood had been given for their improved protection of their forests during the previous year, reverted during the year under report to their previous bad habits. Steps are being taken to suspend privileges, increase grazing fees, etc., in the worst cases.

North Khándesh.—It was the general rule for the forests to be burnt annually from end to end, and in order to prevent this special fire protection measures were instituted in the year 1909-10. This has resulted in a great reduction of fires as will be readily seen from the table below:—

	Year.		Area under regular protection.	Failures.	Percentage of failure.	Expenditure.	Expenditure per square mile.;

The rise in the expenditure in 1909-10 was due to the introduction of the new fire protection measures, and the change in area in 1910-11 is due to the reconstruction of the North and West Khandesh divisions.

It is a matter of regret that the area traversed by fire in the year under report is greater than that of the two preceding years, but this is not altogether surprising; for the year 1911-12 was a famine year and almost all the grass in the forest was cut and removed by permit holders. In 1912-13 there was a late heavy rain in November which, although the grass was more plentiful, kept it green longer and consequently less liable to fire. The rains preceding the 1913-14 fire season were fairly good in Khándesh and the grass grew to an

enormous extent in the forest. Correspondingly there were excellent fodder crops in the revenue lands and consequently very little grass was removed on permit and hence there was greater danger from fire.

Out of 14,329 acres burnt in Shirpur East, 12,561 acres are reported as being the result of 13 fires due to unknown causes. The large area burnt in Shirpur West is chiefly due to two fires which occurred at the middle of March. The first fire, which burnt 11,305 acres, came over from across the Barwani State boundary and is due primarily to the fire line not being properly completed on the Barwani side despite frequent urgent communications.

The second fire, in which 8,000 acres were burnt, is said to be caused by a bhil who crossed from the Barwani border near Kodit and lit a fire under a mhowra tree. On the jungle catching fire, however, he recrossed into Barwani and escaped.

For good fire protection during the 1912-13 fire season numerous free grants of wood were given. Twelve villages were granted the privilege of free grazing for their cattle during the ensuing season, i. e., 1913-14, and pugries were presented to the patels of Hisala, Bablas, Wakwad, Kakadmal, Boradi and Malkatar for especially meritorious service. Under section 285-C of the Standing Orders of the Forest Department Rs. 416 were distributed among the patels of the Akrani for good fire protection. On the other hand, the inhabitants of 14 forest villages showed great dilatoriness in proceeding to put out forest fires and hence the privileges of six villages were stopped and 8 villages were compelled to pay grazing fees at ordinary rates under orders of the Collector, West Khándesh.

Poona.—On account of fires occurring in their forests communal punishment in the shape of enhancing the rate of grazing fees for villagers' cattle in the offending villages, has been inflicted under the Collector's orders. In other cases notices have been issued warning the villagers that if they do not co-operate with the Forest Department in the protection of forests against fires, grazing fees for their cattle will be enhanced. It is hoped that the above measures will have a wholesome effect. A gradual change for the better in the attitude of the village people in the matter of fire protection is already visible since, in some villages where there have been forest fires in the year under review, the villagers have freely co-operated with the Forest Department in arresting the fires. The average acreage per fire during the year was 30.09 as against 18.4 of the previous year, the area burnt in 1913-14 being 3,883 acres and in 1912-13, 938 acres.

South Násik.—The Dindori Range is the greatest defaulter in fire protection, having contributed 33 fires with 2,426 acres against 4 with 288 of the previous year. The total number of fires in this division was 101 and the area burnt was 4,559 acres.

On the whole, except in East Khándesh, there is no reason to be discouraged by the result of fire protection during 1913-14, and measures are being taken to obtain better protection in East Khándesh, in particular, in 1914-15.

Southern Circle.

The system of fire protection remained the same as in previous years but the year was an unfavourable one due to defective monsoon and late rains. The dead bamboos also added to the difficulties in extinguishing fires. The results were therefore rather disappointing.

The area in which protection was attempted during the year was 1,244,513 acres or 1,944 square miles. The increase of 32 square miles as compared with the area attempted in the previous year was due to more areas having been brought under protection in four divisions, the chief increase being in Dhárwár, where it was extended to Doni forests (10,895 acres).

Of the area under protection 1,173,162 acres or 1,833 square miles were successfully protected as against 1,194,457 acres or 1,866 square miles during the preceding year. The percentage of failure thus increased from 2.4 to 5.7 and the cost from Rs. 12-0-1 to 14-11-9. The increase in the area burnt is conspicuously noticeable in Kánara, Northern Division, Belgaum and Dhárwár,

though Kánara, Western and Southern, divisions also contributed to it in slight measure. There were on the other hand small decreases in Kánara, Eastern Division, and Bijápur as detailed below:—

In Kánara, Northern Division, about 13,000 acres in Kulgi Range were burnt by a single fire caused by carelessness in burning fire-lines (a preventible cause); but for this the result would not have been so disastrous. The sub-ordinates concerned were punished. Even with such bad results the Divisional Forest Officer is not despondent as he finds the people better disposed than formerly to help in fire protection. It must however be noted here that the Haliyal Range jungles, which, on account of their bordering on the Dhárwár District, are most liable to be burnt, and were actually burnt nearly every year up to now, were most successfully protected. The Forest Ranger, Mr. Tuggarse, deserves credit for this.

In Kánara, Eastern Division, the number of fires reported were 178 against 105 last year, but the total average burnt was less. The increase is due to more fire stations through which even the smallest fire of a few gunthás, which formerly used to pass unnoticed, is now reported. This means that fires are still as frequently started as formerly, but arrangements for putting them out are far better now.

In Kánara, Southern and Western divisions, as well as in Bijápur and Ratnágiri incendiarism was not extensive or important enough to call for any comment.

Belgaum, inspite of all the preventive measures adopted by Mr. Hodgson, exhibited sad results. In Khánápur, West Range, where as a rule forest will not burn between 24th May and 7th June, many fires were started at the same time in the month of May—obviously prearranged—burning 11,900 acres.

Dhárwár is always a bad division for fires and it is no wonder that the results were unsatisfactory, the unfavourable climatic conditions helping.

Punitive measures adopted and concessions allowed for good general protection during the year were:—

Divis	ion.		Number of villages rewarded with free or concession grazing for good general protection.	Number of villages punished for bad protection of jungles by excessive grazing fees,	Remarks.
Kánara, N. D. Do. E. D. Do. S. D. Do. W. D. Belgaum Dhárwár Bijápur	•••	•••	48 42 8 155 11 3*	40 22 18 3 129 16 2	*Only 158 cattle
	Total	•••	267	230	and not to all.

Besides the above communal awards, patels and other village servants in Belgaum District in seventeen instances were rewarded in durbar with orna-

mental coats, turbans, etc., for assistance rendered in good general protection of forests.

There were 862 fires reported as compared with 552 in the previous year and there was an increase under every cause except "by railway engines". The carelessness of workmen, purchasers and travellers caused 170 against 102 in the previous year and the proportion from this cause is very high. 65 fires are attributed to deliberate incendiarism against 77 last year. Only 16 fires in Dhárwár and Belgaum together were caused by locomotives compared with 21 last year. Though the conditions were favourable for line burning yet 31 fires originated from carelessness or accidents in this respect as compared with 28 in 1912-13. For this preventible cause the staff responsible were duly punished, especially in Kánara N. D. where, as alluded to elsewhere, one single fire destroyed about 20 square miles of forest. In Dhárwár there were 12 fires from this cause but the damage extended only to 1,540 acres.

There were 143 detections of incendiarism reported of which 29 were taken to Court against 74 and 23 respectively in the previous year, and 114 were dealt with under section 67 against 51 in 1912-13. The following statement gives the results of prosecutions:—

Total of 1912-13	{	1	5	7	229	83	2,932	15	554	106	3,720

The season has been a disastrous one as regards fires and all the four divisions contribute to the increased area of forest traversed by fire.

There were in all 206 fires during the year as compared with 106 in the previous year, the average area burnt being 49 acres as compared with 35 acres of the previous year.

The Jerruck Division is responsible for the largest increase in fire cases and in this connection the Divisional Forest Officer remarks:—

"The large number of these, almost treble that of last year, has been due almost entirely to deliberate incendiarism and the increase in area of each fire to the unusually large amount of dense grass in the forests which was induced by the heavy rains and floods of 1913 and which rendered the control and extinction of outbreaks exceedingly difficult.

One forest in the Mulchand range was entirely closed to grazing but the measure failed to produce any improvement and apparently led to active resentment in the vicinity, and it is now proposed, with the concurrence of the Collector, to treble the fees and open it to grazing and at the same time to deprive it of excess inundation in the hope of reducing the inflammable material in the forest.

The general increase of fires in the circle is due principally to the heavy rainfall of August 1913 and the enormous increase in the growth of coarse grasses which were set fire to by cattle owners in order to get fresh grass for their cattle.

Preventive measures.—In addition to the repairing of fire lines cut last year, 18\frac{3}{4} miles were fire-traced along ferry paths, roads, compartment and boundary lines in the Jerruck Division. The cost incurred on this work was Rs. 825-5-6 or Rs. 44 per mile.

Fire watchers were employed in the Jerruck Division for patrolling fire lines during the fire season, the amount spent on this work being Rs. 1,570-3-5.

The statement required by Government Resolution No. 248 of 12th January 1904 regarding areas enjoying continuous immunity from fire for a period of 7 years is given below:—

The number of impoundings decreased from 22,666 to 19,124: 23,249 being the three years' average.

The reduction is chiefly due:-

In Panch Mahals, to the revision of the grazing arrangements.

In Central Thána, to some cases being not reported by subordinates, and

In South Thána, to a less number of cattle having come from the gháts for grazing than in the previous year.

Central Circle.

Out of 4,420 square miles of forest lands in charge of the Forest Department 970 square miles were closed to the grazing of all animals throughout the year and 134 square miles for part of the year. The former comprises area of forest closed after exploitation, and the latter represents lands which are worked primarily for the production of grass for cutting; and in these lands there is little objection to the admission of horned cattle to graze after the grass has been cut and removed, and grazing is therefore allowed in them for periods varying from 2 to 4 months, i. e., during the hot weather months and before the commencement of the rains. One thousand eight hundred and sixty square miles of forests in charge of the Revenue Department were open to all animals throughout the year for grazing. Owing to deficient rainfall in the eastern Deccan and mainly in Sholápur and in part of the Sátára District, there was great scarcity of grass in those parts. Elsewhere the crop was bountiful.

The following statement gives the details of impoundings of cattle and an analysis of the results as compared with the figures of previous years:—

Division.			Cow	and ocks.	Buf	faloes.	Go	ats.	She	юр.		ther mals.	Tot	al.	Grand

Total, 18	12-13	•••	3,666	37,587	255	4,675	17,929	16,523	15,473	5,487	48	426	37,371	04,698	102,269
Average of past 8	years	•••	2,859	30,643	286	3,138	9.247	19,352	8,824	10,216	76	376	21,291	64,025	85,316

On the whole the results of the grazing arrangements are favourable. The number of cattle of all descriptions which were impounded for illicit grazing was 79,510, which is the lowest on record for this circle. The number impounded in 1912-13 was 102,269, but the figures of this year had been swelled by the drought in Ah mednagar and the eastern talukas of Poona. The average of the previous three years, i. e., 1911-12, 1910-11 and 1909-10, was 85,316.

Further analysis of the cattle impounded gives the following comparative results:—

		Horned Cattle.	Sheep and Goats.	Other animals.
1913-14 1912-13 Average of the three previous years	•••	46,383	41,894 55,412 47,639	935 474 452

Of the horned cattle only 3,336 were impounded for grazing in open forests i.e., because of non-payment of fees. The remainder was impounded for trespassing in closed forest.

The grazing of goats is prohibited in forest under any circumstances and the number impounded for breach of the rule was 25,585. The grazing of sheep is allowed in certain forests only; 2,844 were caught in areas closed for regeneration and 13,965 in areas open for horned cattle but not for sheep, or were impounded for non-payment of fees. The grazing rules are administered as lightly as possible, and though further improvement in the reduction of impoundings is hoped for, it cannot be anticipated with any certainty in view of the large number of cattle in the circle and the numbers of sheep and goats brought into Khándesh for part of the year from the Central Provinces by wandering graziers.

Southern Circle.

The details of area open and closed to grazing are given in form No. 16.

In this circle the area closed to all animals for the whole year was 734 square miles or 16 per cent.; the area closed to browsers was 4,329 square miles or 94 per cent.; closed to all animals for part of the year 3 square miles or 06 per cent.; and the area open to all animals for the whole year was 273 square miles or 6 per cent. Sheep and goats are not allowed to graze in forests except a few in Bijápur.

Except in Kánara Western Division and Ratnágiri, the area closed to all grazing rose by 41 square miles owing to closure of areas in an increased

number of felled coupes under schemes of working. In Kánara Western Division the figure 76 shown in last year's return was incorrect and the same is now altered into 41.

The number of cattle that grazed in the forests during the past two years are compared in the following table:—

	Year.	Horned cattle.	Sheep and goats.	Other animals.	Total.
1913-14 1912-13	*** ***	4 K 6 1 D O	No. 2,182 4,440	No. 400 .968	No. 437,481 461,508

The decline in the number of cattle of all kinds is shared by all divisions except Kánara Western Division, where alone there is a slight increase. The decrease is most probably due to insufficiency of grass.

The following table prescribed in Government Resolution No. 4081 of 22nd April 1908 gives the impoundings during the year compared with those of the preceding year and average of the past three years:—

Division.	Cowe bull	and ocks.	Buffs	does.	Gor	its.	She	ер.	Other a	nimals.	T	otal.	Total open and closed for	Total of open and closed for

The fluctuations are in favour of the year. Dhárwár alone shows an appreciable increase which is attributed to outside cattle and goats found grazing without permits. In Ratnágiri there was only one animal impounded in excess of the last year's number. Still there is an unusual increase compared with the figures of the three previous years, the reason being that 128 goats of a professional grazier strayed into the Málvan forests. In all other divisions decreases occur, due probably to the deterrent and restraining effect of the recovery of enhanced compensation besides the levy of pound fees.

Sind Circle.

Ninety-four per cent. of the forest area was open to grazing of cattle (except goats and camels). The latter animals were admitted to about half the area.

Impoundings have increased by 1,299 over last year's figures. The Sukkur Division is responsible for the increase in impoundings, as all the other divisions show decreases. The Divisional Forest Officer gives as the reason for the increase the "stricter" supervision which is exercised over the work of subordinates and "the consequent better protection of the closed areas". A reference to the statement given below bears out the Divisional Forest Officer's

contention, as it will be seen the great increase for the Sukkur Division takes place in the number of goats, camels and buffaloes impounded from closed areas.

The animals impounded during the year compared with those of the preceding year are shown in the subjoined table, as required by Government Resolution No. 4081, dated 22nd April 1908, Revenue Department:—

Fences were made of branchwood round newly exploited coupes over a length of 198 miles. Repairs to existing fences were made on 555 miles. This work was done free of cost with the help of maldars and coupe contractors.

(d) Protection against Injuries from Natural Causes.

Northern Circle.

Creeper cutting was carried on by guards in all Divisions without cost to Government.

To supplement the above work the following sums were spent for cutting creepers:—

		•	Rs.
Surat	•••	•••	··· 64s
North Thána	•••	•••	586
Central Thána	•••	•••	587
South Thána	•••	•••	15

In North Dángs the second year's creeper cutting was carried out, as prescribed in the working plan, in reserved forest block No. II, where 1,004,285 creepers were cut at a cost of Rs. 192. Weeding and eradication of noxious growth in the casuarina plantations in Kolába cost Rs. 46.

Central Circle.

The only work required or which can be undertaken is the construction of small stone dams or "táls" in nala beds to check the flow of water in the monsoon and prevent erosion. Attention was paid to the construction of táls in the Poona District and considerably more than a running mile in length of tals was constructed at a cost of Rs. 1,730-0-0. In the Junnar Range the villagers continued to repair old táls by their own labour; these probably benefited their fields situated below the forest boundary as well as the forests. Similar works on a small scale were undertaken in parts of the Násik District, an expenditure of Rs. 146 being incurred in the North Násik Division and Rs. 219 in the South Násik Division. In the latter the work was carried out in the two Ahmednager ranges which form part of the South Násik Division.

Southern Circle

Wild animals did some damage in Kánara, but nothing serious has been reported. Another hundred plants were washed away in the casuarina, H 1038—9

plantation in Honávar by the set of the tide. Heavy floods of the Krishna and its tributaries have again caused great damage in the Bijápur division to the seedlings in kurans and worked coupes on their banks. Creeper cutting was done as usual without cost by beat guards in all the divisions wherever it was found necessary to free young growth of valuable species. Prickly pear was cleared along the demarcation rides in Bijápur but much still remains.

Sind Circle.

The season throughout the Circle, with the exception of the Sukkur division, was a mild one for frost. In Sukkur most of the young babul seedlings under a year old were killed outright while the older plants suffered severely from the same cause though they revived in the spring. In all divisions where "táli" plantations exist the transplants of the year were protected by grass-hoods and protected from frost. A scourge of defoliating caterpillars again appeared this year in the Hyderabad and Jerruck divisions and caused much damage to young seedlings as well as full grown trees. In consequence the babul pod crop was poor and much revenue lost thereby. Bats are also reported to have done damage to young babul in the Sukkur division: these pests seem to have increased in areas closed to regeneration, where for some years the inundation has been low. Many areas were opened to light grazing by horned cattle as in the previous year as they keep down the dense growth of grass and give the seedlings a better chance. Cattle do not eat babul and the damage done by trampling is more than recouped by the advantage gained by getting the rank grass kept down.

4—SYLVIOULTURE.

(a) Natural Reproduction.

Northern Circle.

(i) From seed.

Excepting in Kolába and the Panch Maháls, the natural regeneration of teak from seed is deficient. The seed germinates in the rains, but almost all the seedlings are choked by weeds. In the abovementioned two divisions, wherever fire protection is successful, regeneration of teak and ain (and tiwas in the Panch Maháls especially) is good. On the other hand, in the more valuable forests of Surat Dangs and of Thána District the dense herbaceous undergrowth and creepers completely smother teak seedlings. In July numbers of teak seedlings may be seen; by September all of these are smothered and can with difficulty be found—wretched little plants with very small leaves all turned yellow. Plants in this condition cannot possibly withstand the 7 months' dry season. The absence of thunderstorms in the hot weather render their chances all the more hopeless.

(ii) By coppice shoots.

Teak coppices very vigorously, especially in North Thána. At the same time it has been noticed in the Surat Division that old trees often fail to coppice at all and the same failure is obvious in many of the Thána coupes.

Central Circle.

East Khándesh.—Excessive grazing, which is unavoidable, retards natural reproduction in many areas. Fires, where they occur, and especially in the Sátpurás, do untold damage to natural reproduction. In ranges where fires have been prevented for several years, the improved tree growth is very noticeable. Apart from such drawbacks natural reproduction is everywhere as good as can be expected from the factors of the locality; and only in babul coupes is artificial reproduction.

Poona.—In the evergreen forests, where the rainfall is heavy, reproduction by seed was satisfactory. In the teakclad areas there has not been much improvement over the previous year's condition owing to the failure of the late rains. "Kalak" bamboo and karvi had flowered in the previous two years and died down. In the year under report a reappearance of karvi is visible.

Natural regeneration of babul is satisfactory in forests inundated by high floods by which babul seed was deposited over much of the area and germinated well and seedlings became established. Sandalwood reproduces itself finely in forests where the tree is found.

North Násik.—The fallen seed from the bamboos which seeded and died in the previous year in Kalvan has germinated well and seedlings of bamboo have become well established.

The above remarks have been made by Divisional Forest Officers. In general in the Central Circle natural reproduction has been fair during 1913-14, wherever forest fires have been kept out and wherever it has been possible to limit the number of cattle admitted to graze.

Southern Circle.

(i) From seed.

This was not a good seed year. Reproduction from seed was generally poor, probably owing to want of moisture in the soil from defective rainfall. It is reported to be fairly good only in favourable localities in high forests. Young karvi and bamboos are just reappearing after last year's flowering.

(ii) By coppice.

Coppice reproduction was as usual good in almost all divisions, and more particularly in Kánara South and West Divisions, where the seedlings in out coupes are not so badly damaged by fires as in Belgaum and other parts of Kánara. The coupe mális entertained sheltered the young seedlings against sun, weeded them, and kept the cattle out, cutting back broken and damaged saplings. Such of these as outlived the fires are reported established and thriving.

Sind Circle.

The area inundated was 114,356 acres as against 440,877 acres of the previous year. Natural reproduction both from seed and coppice on the flooded area was satisfactory although not to an extent as is desirable. The failure of the pod crop in Jerruck and Hyderabad, the low inundation which especially affected Sukkur and the visitation of the defoliating caterpillars account for the rather poor results. Given an ordinary pod year and sufficient water, natural reproduction is a certainty.

(b) Artificial Reproduction. Northern Circle.

Regular plantations.

Division.		Plantation.		· Plants raised.		Cost.

South Thána	•••	Mulund	•••	1,700 teak 13,050 other plants	•••] 18
Kolába	•••	Magaon Askhi	•••	19,433 Casuarina plan	ıts .	585

In Mulund and Pelhar, etc., the rubber plantations have proved a complete failure and are now abandoned.

The casuarina plantations in Kolába and North Thána (unfortunately very small areas) are successful and will provide a much needed supply of fuel. An experiment was made to start casuarina plantations in the Panch Maháls without success.

The results of teak planting in the Panch Maháls show that it is difficult to bring seedlings through the long dry season (more than 4 out of 5 plants die).

Cultural operations.

In Panch Maháls.—Forest lands were leased out temporarily to cultivators who were to sow forest tree seeds in lines 15 feet apart with their cotton crop. Unfortunately the cultivators seem to be more interested in the destruction of the tree seedlings than in their preservation.

Surat.—In Bulsár-Chikhli range, 10,750 teak seedlings and 9,120 junglewood seedlings were transplanted from the nurseries into coupes.

In Mándvi about 4,000 teak and 6,000 junglewood seedlings were planted out, but over 80 per cent. died off in the hot weather, this too in spite of mulching and shading. In North Dangs some planting was done.

In the three Thana divisions and in Kolaba dibbling in seed and sowing in pits was carried out.

Central Circle.

These were similar to those recorded in last year's report. A few interesting details are as follows.

West Khándesh.—Agriculture-cum-Forestry was continued in the Dhulia Range: 520 acres were given out for cultivation under this system. No anjan seed was available. Nim, babul and khair seeds were sown. Only moderate results in production of seedlings were obtained, so the majority of the numbers will be given out again for cultivation, and anjan seed, of which a good crop has been produced this year, will be sown in addition to the other species. Most of the plantations of previous years are doing well, but areas sown with nim suffer heavily from browsing by deer.

Poona.—All the babul coupes after being clear felled were ploughed up and sown with babul seed; the area treated was 337 acres and the cost incurred Rs. 411. The germination of the seed was fairly satisfactory. In the teak coupes, patches in selected situations were made and teak seed sown in them; the results were not very encouraging. The cost incurred in making patches and sowing seed was Rs. 182 and the area on which the operation was conducted was about 273 acres.

No systematic plantation work is carried on. A few thousand teak plants were however as usual reared in the Hivre Botanical Garden in Junnar Range and transplanted into exploited teak coupes of the range, i. e., the open area in coupes 4 and 5 of Alme. In the Satwai kuran of Khed, some babul seed was sown in lines in a small area and gave good results.

North Khándesh.—The work done by the bhils in the Agriculture-cum-Forestry settlements was unsatisfactory in all cases except Kiria (Taloda). Some seedlings came up in the cultivated areas but few survived. This was probably due to the bhils not properly protecting them against grazing. It has therefore now been arranged to let out the forest plots to the bhils entirely for their cultivation only, on condition that instead of producing seedlings with their crops they shall sow up the blank places in the coupes as they come under closure each year.

Southern Circle.

Regular plantations.

Thirty-eight acres of cut area of casuarina plantations on the Kánara coast ranges were replanted and 3 acres were added to those in the Ratnágiri Division at a total cost of Rs. 11,403. The year was an unfavourable one as regards watering.

Cultural Operations.

Kánara, Northern Division.—The system of nursing natural seedlings in this division, referred to in the last year's report, was continued and about 80,000 were tended successfully. About 84,000 were planted out in the gaps in Haliyál pole coupes and the high forests of Gund, Kulgi and Dandeli.

Kánara, Eastern Division.—About 23,000 teak plants from nurseries were transplanted in worked compartments of high forest. In Yellápur Range 10 seeds were dibbled in in each of the 4,000 pits dug in the felled area. Also several bagsful of seeds of teak, sissum, matti and honne were dibbled in in the felled portions of the Mundgod Range coupes. Twenty-six acres in Kátur Range were similarly treated with different kinds of seeds. Besides this, 34,000 junglewood seedlings were transplanted in the felled coupes of the Mundgod Range. In the Kirvatti Range 11,000 teak seedlings were dug up on the road-side fire lines and transplanted into the jungle, and nearly all of these established themselves. All these operations were spread over 7,684 acres with an expenditure of Rs. 1,387.

Kánara, Southern Division.—As the plan of dibbling in seed did not succeed well, blanks in coupes were filled in with home and matti seedlings from the surrounding jungles. Teak also has been planted in favourable spots in coupes along cart tracks as those planted in the previous year were doing well in similar places.

Kánara, Western Division.—A few thousand teak and matti natural seedlings were planted out in the Chandáwar jungles. Beyond this nothing was attempted. Nurseries are now being started and it is hoped that something will be done towards replacing the timber cut, etc.

Belgaum.—About a thousand teak and sissum plants were dug up and put in the Tavargatti nursery and in closed coupes, the same as was done last year. Those put out in series 19 were a failure due to the ravages, it is said, of wild animals. In Gokák Range a commencement has been made by sowing indigenous species in small patches cleared of prickly pear. This is yet in the experimental stage.

Bijápur.—Beat guards collected about a hundred maunds of timber seeds common in the district and sowed them in pits dug in cut coupes, but the seedlings were killed by drought. Shindi (date) palm seeds sown did not germinate at all. Attempts made to restock the black soil babul coupes by ploughing, levelling and sowing along with agricultural seeds have been very successful as in previous years. The transplants of teak in kurans as well as the bamboo and blackwood have been reported to be doing well. The area covered by all these operations was 731 acres and the charges amounted to Rs. 118.

Ratnagiri.—The nursery in Dápoli was maintained with due care and about 1,650 plants were transferred to the plantation to replace the blanks.

Dhárwár.— About 60 maunds of teak, etc., seed were dibbled in in closed coupes as also in blanks in all the ranges, but it is reported that they did not germinate well in Dhárwár and that in other ranges success was only partial. Two pounds of bamboo seed has been experimentally dibbled in in Hángal Range. A similar attempt has been made in Mod, Bankápur and Kalghatgi Ranges with 8 lbs. of sandalwood seed. A nursery has also been started at Samasgi on the Kánara frontier with teak, matti and sandalwood.

Sind Circle.

Regular plantations.—The only regular plantations in Sind are those of tali (Delbergia Sisso). There were 258 acres under regular plantations at the commencement of the year. Eleven acres were added and 6 acres were eroded or abandoned. Total at the end of the year, 263 acres.

No extension work could be undertaken in Kot-Sultan plantation owing to the insufficiency of water-supply, the available supply from the Mirza wah being barely sufficient for the existing plantation area.

The old established gardens	vere maintained	as uno	ler :		Rs.
Sukkur Division— Rahuja at a cost of					1,001
Hyderabad Division— Miani Bungalow "Monument "Mango garden	at a cost of			441	1,288
		4	Total	***	2,289

Cultural operations.—These are of two kinds (a) Forestry-cum-Agriculture (by lift irrigation) and (b) broad-casting on bare areas and exploited coupes which receive flood water. Under the first method 1,607 acres were brought under regeneration, the assessment (amounting to Rs. 4,622) being credited to the Revenue and Public Works Department by book transfer. This is for lands which get water from the Public Works Department canals. The results reported were only fair in the Sukkur and Hyderabad but are reported to be good in the Lárkána and Jerruck divisions.

Under the 2nd system, 2,205 maunds of babul and kandi seed were sown throughout the Circle over an area of 8,308 acres comprised in exploited coupes kacha and blanks. The results in all divisions were excellent except in Sukkur where there was a partial failure owing to frost and low inundation.

(c) Operations for the Improvement of the Growing Stock.

Northern Circle.

Surat.—1,848 badly grown saplings cut back level with the ground, 4,235 teak saplings freed from interfering growth and eradication of noxious growth in old coupes done at a cost of Rs. 64, and hedges round certain coupes repaired for Rs. 17.

North Thána.—Cleanings were made in the coppice of teak, ain, khair, sisoo, bibla and tiwas in two-year-old coupes at a cost of Rs. 202. Three experimental thinnings were made in a coupe of each of the three ranges in order to ascertain the cost of labour entailed, the profit gained, and also to teach the forest staff the system and the principles of the operation. The result was financially satisfactory; the sum spent being Rs. 263, and the revenue realised Rs. 677, i. e., a net profit of Rs. 414. Systematic thinnings in coupes will be introduced in this division next year, if possible.

Central Circle.

The cutting of creepers was carried out by forest guards during their inspection work. Some thinning of superfluous coppice shoots on teak stools was done in the Poona division; and lantana and prickly pear were cut out or eradicated to such extent as was possible with the means at disposal. Thus in North Násik Rs. 83 were spent in eradicating prickly pear, in Poona Rs. 372, in Sátára Rs. 29 and in South Násik Rs. 210. As no work of this nature was necessary in Khándesh, the total expenditure amounted to Rs. 694.

Lantana has a tendency to spread and to give trouble in parts of the Sátára and Poona divisions. It has nowhere, however, become a menace and steps are being taken to check it where considered necessary.

Southern Circle.

In Kánara, Northern Division, 5,702 inferior trees and 12,354 climbers were cut and saplings were freed from interfering growth.

In Kanara, Eastern Division, 75,502 bamboos, 68,193 creepers, 20,194 unsound teak and junglewood trees and 115 teak poles were cut. Also 9,600 teak trees were pruned and 50,706 teak seedlings were set free. The expenditure was Rs. 1,135.

In Kanara, Southern Division, creeper cutting was done on a larger scale than usual without cost by the staff. Teak trees were freed and trees were marked for thinning near the rubber plantation at Guersoppa.

In Kánara, Western Division, creepers were cut and thinnings were made in Kadra and Mardi teak plantations.

In the Belgaum Division 50 inferior trees, 19 bamboos, 1,764 broken trees and old stumps and 2,653 creepers were cut, and 303 teak, sissum and karimuttal seedlings were freed.

In the Dhárwár Division about 20,000 teak, blackwood and sandalwood trees were freed from interfering growth by cutting creepers and climbers. Also a thinning was made in the Kalkundi teak plantation.

The only work done under this head in Bijápur division is the clearing of prickly pear in fuel coupes. Creepers were also cut.

Sind Circle.

The only operations were the cutting of creepers all over the circle, and some thinnings in the Jerruck division which in addition to yielding revenue effect a real improvement in the growing stock.

(d) Experiments.

Northern Circle.

Except the rearing of hirda (Terminalia chebula), sandalwood (Santulum album) and casuarina in the forests of Bandh-Tiwre in Kolába and the last mentioned kind and aloes in Central Thána, no other experiments were carried out.

The rubber plantations in the Thana District give no promise whatever and are now abandoned.

Central Circle.

Experiments in the propagation of lac in forests were continued during the year. The lac does not spread readily of its own accord and it is doubtful whether it can be made to pay unless it can be produced in compact and well stocked areas. The following remarks of Divisional Forest Officers on the results of experiments in their divisions are recorded.

East Khándesh.—The introduction and propagation of lac has been tried in several ranges, but results are not encouraging. Fifty tolas of lac was collected in Chopda Range but slackness in performance of important routine work by the officers concerned detracts from any credit in the result obtained.

West Khándesh.—Lac inoculation work was continued during the year in the Deomogra reserve of Nandurbár Range. Inoculations were made at the commencement of the year and also in the month of October-November, that is, shortly before the swarming season in each case.

There is no difficulty in getting a successful inoculation, and the freshly swarmed insects establish themselves well at first. But as soon as secretion of lac commences in earnest, the insects are attacked by swarms of ants, both black and brown, and very little lac ever comes to maturity. It is not easy to see how this is to be avoided, as even if the tree trunks are tarred or dressed with some grease composition, the grass which is very high in these parts will always give the ants a means of reaching the lac infected branches. Out of 420 trees successfully inoculated in June-July 1913, only 28 trees or 6 per cent. contained lac insects in May 1914; and out of 650 trees successfully inoculated in October-November 1913, only 105 or 15 per cent. contained lac insects at the same date of inspection.

North Khandesh.—The forests have been searched for trees bearing lac and it has only been found on a comparatively small number of trees of the following species: palas, bor and pimpri. Experiments in propagation have been started in all ranges. In July and August and also in November of 1912 the lac was observed in Taloda to have spread naturally to several new trees of the above species. Brood-lac is being tied on to koshim, palas, bor and pimpri, etc.: and careful observations of the individual trees are being kept.

Other experiments in different divisions were as follows:

North Khándesh.—Utilization of fire lines. In the Taloda Range an attempt has been made to utilize fire lines by making within them the plantation of ever-green trees. The Rozwa-Kothar fire line was chosen and about 100 yards of it were planted with nim, mango and banyan six feet apart leaving a space of 40 feet clear in the middle of the line to serve as a road. The seedlings thrived well till the end of March but withered in the hot months of April and May, so that only a small percentage of the plants now survive. Banyan was least successful, and was therefore replaced by mhowra and tamarind. Although ever-green fire lines are good in theory, they cannot in Khándesh be prepared within reasonable limits of expenditure owing to the dry climate. The experiment has therefore been discontinued.

West Khándesh.—In the Sakri, Pimpalner, Nandurbár and Navápur Ranges plantations of ever-green trees on the fire lines were attempted. Pit sowings of mango and chinch were made, and cuttings of wad, pimpri, etc., were planted. The cuttings were all failures and so to a certain extent were the pit sowings, with the exception of one plantation in the Sakri Range, which has been successfully carried through hot months by artificial watering. The general result of these experimental plantations must be recorded as failures, and they will not be continued.

Poona.—Experimental sowing of hirda was continued in Junnar Range and begun in Lonávla Range. Results are so far satisfactory. This operation will be continued and further extended as may be found desirable.

Sátára.—As reported in last year's report efforts were made to construct a "Timber Catching Boom" on the river at Karád and an outlay of Rs. 1,372-2-11 was made towards the purchase of the required material and erection of this "Boom"; but the erection of the boom proved to be impracticable and the material purchased at a cost of about Rs. 850 is being for the present stored pending further consideration. Meanwhile exploitation of injaili wood in the ever-green forest of the Koyna valley has been suspended; but the marking and working of a compartment in the Rasati forest at the mouth of the Koyna valley is to be undertaken next year and an experimental depôt established near the road along which carts from Karád proceed to and from the Ratnágiri District.

Southern Circle.

To see what trees could be grown by artificial regeneration in Gadag Range forests an area of ten acres near a nullah was ploughed and a quantity of seed—teak and junglewood—was sown broadcast in 1911-12. A few germinated but the seedlings did not survive the hot weather. The experiment was repeated in 1912-13 with three acres; again the result was the same. Evidently the soil is unsuitable and moisture too scanty. Last season some seedlings from malki lands had been transplanted in blanks and other open spaces in the forests and these are thriving, but it is too early yet to pronounce on the experiment.

Sind Circle.

Attempts were again made in the Hyderabad and Jerruck Divisions to extend the lac-bearing area, but only a small success was obtained in the Jerruck Division where about 10 maunds of lac were available early in 1914; the failure is due principally to an abnormally hot season which seems to have killed off the brood lac. Further attempts, however, to propagate lac are being carried out in the Hyderabad and Jerruck Divisions.

The seed of following exotics was sown with very poor results:

- (1) Bambusa arundinacea,
- (2) Dendrocalamus strictus,
- (3) Baukinia variegata.

Only Bauhinia variegata germinated in the Rahuja nursery of the Sukkur Division. The exotics planted in former years in this nursery are doing well.

5.—EXPLOITATION.

(a) System of Management.

(i) Major Forest Produce.

Northern Circle.

The following table gives the application of the various sylvicultural systems in force as ordered by Government Resolution No. 1542 of 17th February 1913:—

Clear fellings .- None.

Selection fellings.—These had to be held up for want of roads or such other causes.

Coppice with standards.—This system is adopted in all divisions over an aggregate area of 1,749 square miles. 23,242 acres were worked by contractors and one coupe of 26 acres was worked departmentally in Kolába.

Improvement fellings.—These took place in Dohad and Jhálod Ranges in Panch Maháls, North Dángs in Surat, and Mátherán in Kolába.

Unregulated fellings.—These took place in Central and South Dángs for revenue in the form of sale to contractors of standing trees selected by them.

Central Circle.

Clear fellings were undertaken in babul forests only, and the results were as follows:—

	Division.			No of coupes.	Атев.	Receipts.
East Khándesh Poona North Násik	***	•••	••	4 39 12	Acres. 44 433 66	Rs. 580 21,752 1,621

In addition babul trees in lands transferred to the Revenue Department for management were sold and fetched Rs. 2,507, as follows:—

Trees on 200 acres of forest survey No. 159 of Mánjri, transferred to the Revenue Department for the use of Government Agricultural Farm, were sold standing for Rs. 700; and trees in survey Nos. 76 and 77 of Alegaon in the Dhond Range, transferred to the Revenue Department for cultivation, were sold standing for Rs. 1,807-9-0.

Improvement fellings, West Khándesh.—The extraction of dead trees was carried out under contract in the reserved forests in the Nandurbár, Navápur and Sakri Ranges which have not yet been organized. It is estimated that 313,190 cubic feet of firewood were extracted in the year under report. The contractor had failed to do any work in the previous year owing to labour difficulties.

North Násik.—Twenty anjan coupes in Málegaon with an area of 1,953 acres were exploited and realized Rs. 3,519.

Poona.—The extraction of dead and fallen trees was made in the Dhond, Haveli and Khed Ranges in the riverain babul forests where high floods had caused much damage. 162,669 cubic feet of wood extracted and sold for Rs. 9,686-14-0.

Two raiwal coupes in the Lonávla Range for the supply of firewood to Lonávla and Khandála comprising 129 acres were sold standing and realized Rs. 386. One coupe remained unsold.

Sátára.— Departmental cuttings for supply of firewood to the hill stations were made in the Mahábleshwar forest under the existing working plan. In addition to sales made retail and wholesale in the coupes, a depôt was opened for retail sale in Mahábleshwar. The depôt was started at Mahábleshwar on 15th March 1914. Split wood was offered for sale and the depôt was in charge of a special Forester and a guard under the direct supervision of Ranger Gonsalves. The total charges incurred at this depôt during the year were Rs. 454 and 5,530 cubic feet (553 maunds) were sold for Rs. 244. A large stock of split firewood however remained on hand at the close of the season.

At Pánchgani split wood was sold at fixed rate $8\frac{1}{2}$ annas per maund of 80 lbs. by a contractor. This firewood depôt system is not yet fully developed, and several modifications will have to be made before it can be advantageous both to the Forest Department and the public.

South Násik.—Some fellings were undertaken for the supply of fuel to the Akola town people. Timber obtained in the fellings was sold separately, and not brought to depôt. The operations produced 24,179 cubic feet of timber and 54,300 fuel at a cost of Rs. 1,071 out of which 19,052 cubic feet of timber and 34,147 of fuel were sold for Rs. 4,672, and brought in a net profit of Rs. 3,601. As these fellings proved a success it is intended to extend operations similarly to the Násik, Igatpuri and Peint Ranges for the supply of fuel to the towns of Igatpuri, Ghoti and Trimbak and for supplying timber to the Public Works Department.

Selection fellings.—These were made in accordance with working plans as follows:—

West Khándesh.—Four coupes in Nandurbár aggregating 651 acres were sold for Rs. 4,254. The amount of material extracted was 19,340 cubic feet.

Six anjan coupes in Dhulia and Pimpalner aggregating 1,660 acres were sold for Rs. 1,016. The material extracted amounted to 28,600 cubic feet.

East Khándesh.—Thirty-one coupes were sold for Rs. 21,670.

North Khandesh.—Thirty-three coupes were sold for Rs. 43,851.

South Násik—Twenty-nine coupes were sold for Rs. 11,726.

Coppice fellings.—These also were made in accordance with working plans as follows:—

Sátára.—Eighteen coupes were sold for Rs. 9,927.

Poona.—Twenty-seven coupes were sold for Rs. 21,938.

North Násik.—Twenty-seven coupes were sold for Rs. 5,7(0.

West Khándesh.—Five coupes were sold for Rs. 5,183.

South Násik: - Fifteen coupes were sold for Rs. 3,029.

Unregulated fellings, West Khandesh.—120,530 cubic feet of firewood were cut in revenue waste lands assigned for clearance and receipts were Rs. 1,08,561.

North Khandesh.—In the Akrani Range fellings were made to supply the wants of the local population in accordance with their privileges.

North Nasik.—12,487 cubic feet of timber were cut in malki survey Nos. due for clearance and fetched Rs. 2,685.

Poona.—A thinning of sandalwood and other species of trees was made in the Hivre experimental garden, the first that has been made since its inception some fifty years ago. The thinning was over part of the area only and the material sold for Rs. 627. The thinnings will be continued, since the area is heavily over-stocked.

Southern Circle.

Clear fellings.—These were made in Kodibag and Kasarkod casuarina plantations in Kánara on an area of about 16 acres realising Rs. 340 per acre. The two babul coupes measuring 36 acres in Bijápur exploited departmentally under this system fetched Rs. 139 net per acre.

Selection fellings.—These were undertaken in accordance with the provisions of the sauctioned working plans as shown below:—

					Number of trees cut					
4		Division.			Teak.	Blackwood.	Jungle wood.			
	Org	anized are	ea.				<u></u>

		То	tal of 1 91 2 -1	3	9,823	855	3,538			

Improvement fellings.—Under this system 11,384 crooked, stunted and inferior trees were cut in the Sambrani and Dandeli Ranges of Northern Division, Kánara, and in the Mundgod and Kirvatti Ranges of Eastern Division, Kánara.

Coppice fellings.—This is the system most generally in use in all the divisions of this circle. 12,347 acres were worked during the year against 10,320 acres in 1912-13:—

	·				
Divi	Jon	Area in	Revenue 1	per acre.	Quality.
DIVI	1011.	acres.	1913-14.	1912-13.

•	Total for 1913-14	6,265	. 9	•••	
	Total for 1912-13	4,298	•••	5	-

There is much improvement both in the prices obtained and in the working of coupes, but those of Eastern Division, Kánara, are capable of realising a much larger revenue if a light railway could be built from Hubli to Mundgod.

Unregulated fellings.—These were made in Kánara, Eastern and Southern Divisions, Belgaum, Dhárwár and Bijápur divisions where 2,075 dead trees and their produce sold for Rs. 35,872. In Bijápur 158 sandalwood trees were sold standing for Rs. 518 to be exploited by the purchaser himself.

Sind Circle.

Clear fellings.—The coupes exploited throughout the circle in accordance with the provisions of the working plans come under this head. 13,613 acres as compared with 10,539 acres of the preceding year were worked in this manner.

Improvement fellings.—The removal of standing and fallen dead trees was carried out in the Hyderabad and Jerruck divisions as sanctioned in Government Resolution No. 10562, dated 26th October 1907. The area worked over was 10,769 acres as against 11,947 acres in 1912-13.

Thinnings were also made in some forests of the Jerruck division by contract agency. The operations extended over 1,030 acres.

Unregulated fellings.—Under this head come clearance of trees from erosion strips, free grants and wood cut to meet urgent demands of the Public Works Department. The area so cleared was 3,831 acres as compared with :,524 acres in the previous year.

(ii) Minor Forest Produce.

Northern Circle.

Form No. 20 gives details.

Central Circle.

Full details will be found in form No. 20 in the appendix. The most important items were:—

				Rs
Grass and grazing	•••	•••	•••	3,54,827
Mhowra seed	•••	•4•		84,722
Bamboos	•••	•••		16,420
Hirda and shikekai	•••	•••	•••	17,929
Rosha grass		***		7,173

Grass and grazing will be further dealt with later on. In the year under report there was good production of grass, both in forest and in lands outside forest, in all parts except the eastern Deccan. There was consequently a decline in the demand for forest grass and some decrease in the revenue On the other hand famine fodder operations had under that head. to be continued for the third year in succession by the Conservator, Central Circle, for the supply of fodder to the Sholapur District and, to a small extent, to Sátára and to the Akalkot State. These operations will be dealt with in a separate report to Government, and it is sufficient here to state that in all 87,29,200 lakhs of pounds of grass were obtained from various sources, e.g., from the Navapur grass monopoly contractor, Mr. Bhiladwala, under his agreement; from departmental reserve stocks, and by further departmental collection, and by purchase from contractors and merchants. The operations extended into the following year, i. e., up to 15th August 1914. For various reasons given by Mr. Bhiladwala, of which one was to a large extent correct, viz. scarcity of labour—the work done by him at Navápur during the year was not satisfactory. He not only failed to provide the extra grass required from him in consequence of the famine in Sholapur, in accordance with his agreement, but even failed to replace completely the 25 lákhs pounds of grass which he had stored as reserve fodder in the previous year. The whole of the grass was despatched to Sholápur as well as such quantity of the new season's grass as Mr. Bhiladwala was able to cut and supply. The 25 lakhs of pounds of reserve grass which should be on hand in the beginning of 1914-15 is consequently entirely wanting.

Mhowra seed.—The seed crop in the year 1913-14 was abundant; consequently the collection of seed, made departmentally as usual, was good. The collection was undertaken in North and West Khandesh and in North and South Nasik. The total quantity obtained amounted to 562 tons 2 cwts., and owing to a rise in the price of the commodity the receipts on sale were Rs. 84,722. As the cost of collection came to Rs. 33,670 there was a net profit in the transaction of Rs. 51,052.

The following remarks of Divisional Forest Officers show in what manner the mhowra crop varies from year to year:—

North Khándesh.—In 1910-11 mbowra seed realized only Rs. 324 whilst in 1911-12 Rs. 25,478 were obtained. Again in 1912-13 it realized Rs. 713 but in the year under report Rs. 17,585. It is therefore evident that accurate estimate cannot be made in advance since the collection depends upon the crop. The crop seems to be poor and good in alternate years.

North Násik.—As disposal by auction the right of collecting mhowra seed from the forests of Kalvan and Báglán had proved unsatisfactory in the two previous years, permission to undertake departmental collection in this year was obtained from the Conservator. The crop being very good 161 tons, 11 cwts., 2 qrs., 2 lbs. were obtained as compared with 33 tons, 8 cwts., 3 qrs., 22 lbs. collected and handed over by contractors in the preceding year. The price for the seed in Bombay was high and it was sold at Rs. 8-2-0 per cwt., while the rate obtained for it in the preceding year was Rs. 7 per cwt. The amount realized for the collection was Rs. 26,325 and the cost delivered in Bombay was Rs. 13,202 showing a net profit of Rs. 13,123.

Hirda.—The receipts from this produce are declining yearly owing to the restricted demand for it in Bombay. Collections are made in the Satara

division (by contractors) and in the South Násik division (departmentally by arrangement with villagers). The receipts in the year amounted to Rs. 17,929.

Rosha grass.—The demand for this article of forest produce is also declining and various reasons are assigned for it as shown further on in this report. The receipts of 1913-14 amounted to Rs. 7,173 showing a still further decline on the figures of previous years. The following remarks made in last year's report are repeated. "This is a product which, under improved methods of extracting the oil, might become of considerably higher value, and efforts are being made by the Forest Economist at Dehra Dun to induce a Bombay firm to erect proper stills and to work on scientific lines. The methods followed now by the purchasers of the grass are crude in the extreme."

Southern Circle.

With the exception of bamboos, which are sold by the hundred on permit, minor products of importance are sold by auction for one or more years. Myrabolans especially, being a variable crop, are bid for by intending purchasers for a term of more than one year so that the profits and losses in good and bad years may counterbalance each other.

The total value of the minor produce removed by purchasers including bamboos, grass, grazing, etc., was Rs. 1,80,915 against Rs. 1,88,464. The decrease is attributed to non-sale of tarwad and kakki bark in Bijápur as also to a general fall in price.

Sind Circle

Lac, fish, babul, bahan and kandi pods, sar and kanh grass are farmed out to contractors; other grass is either allowed free or sold on permits at fixed rates. Grazing is free or on permits.

(b) Agency of Exploitation.

(i) Departmental Agency.

Northern Circle.

In Surat the departmental agency was chiefly confined to North Dangs, in North Thana to thinnings in old coupes and the extraction of windfalls and dead trees.

In Kolába at Mátherán 12,007 maunds of fuel were extracted by departmental agency and a coupe in Mahád was felled departmentally for local retail sale.

Central Circle.

The exploitation operations undertaken were of small extent and importance, all works in the forest being as far as possible carried out by the agency of contractors. The only departmental exploitations in the year under report were the selection fellings in the Mahábleshwar forests of Sátára, and in certain forests of the Akola Range, South Násik division, which were made for the supply of fuel required to meet local requirements. These fellings have already received detailed mention under "Selection Fellings,"

Of minor forest produce mhowra seed and grass (when required in years of draught) are alone collected departmentally, and information regarding these has also been given elsewhere.

Southern Circle.

The works carried out under this head comprise timber and sandalwood brought to depôts for annual sales, fuel supplied to the railway for locomotives, other produce cut or collected experimentally to create a market, for departmental use, or for supply to other Government departments. The total outturn

extracted and disposed of departmentally is compared with the average of the past three years in the following statement:—

			i		Ave	rage of 3 p	receding ye	are.		1913-14.					
		:	,	Balance	Exploited during the year.	Total,	Disposed of during the year	Cost.	Re- ceipts,	Balance.	Exploit- ed durin g the year,	Total.	Disposed of during the year.	Cost.	R.

	Mino	r.		No,	No.	No.	No.			No.	No,	No.	No,		
Bamboos	8	•••			5,733	5,783.	5,733	23	75	***	2,942	2,942	2,942	101	14
				Rs.	Ro,	Rs.	Rs.			Re.	Re.	Rs.	Rs.		
Grass at	nd otl	her D	inor 	997	9,620	9,947	9,556	6,802	9,525	419	4,058	4, 058	2,098	3,450	2,00

The quantity of timber exploited in 1912-13 was 1,101,724 (and not 1,661,724 cubic feet as tabled in the last year's report, 560,000 cubic feet having been wrongly shown in excess). In the year under report it is 1,121,593 cubic feet or 19,869 cubic feet more than in the previous year. Kánara, Eastern Division, alone is responsible for this excess as some arrear work there was brought up to date. The percentage of timber exploited departmentally to the total outturn was 56 against 53 in 1912-13.

In fuel also there is an excess of 312,549 cubic feet over the quantity exploited in 1912-13 and of 365,919 cubic feet over the average of past three years. 6 coupes were worked departmentally, 4 for local supply and 2 for Gokák mills in the Belgaum division. This caused the excess. The percentage of fuel exploited departmentally to the total outturn was 41 against 44 in 1912-13.

The outturn of sandalwood depends more or less on the number of mature or dead trees available for extraction every year. The quantity exploited during the year was about 10 tons less than in 1912-13. Prices obtained also differed slightly. Hence the decrease in the total realisations of the year.

2,942 bamboos were supplied departmentally from the Belgaum division to the Executive Engineer, Málsiras. This is not an annually recurring operation.

This year again grass was departmentally cut for local sale. Also silk, cotton and karanj seed were experimentally collected to try whether a market could be found for them.

During the year there were two sawmills working and the output of both mills was:—

Material	3.		Outturn.	Revenue credited.	Charges.	Profit.
6 feet teak sleepers , rejected 7 feet teak sleepers Bridge sleepers Tramway sleepers Junglewood sleepers Planks Scantlings Battens Felloes	····	C. ft.	10,170 1,162 721 565 3,920 5,000 2,615 11,658 5,669 175	Rs. 27,967 1,162 920 2,825 980 937 7,845 23,316 11,338 850	35,520	Rs.

If the above materials were to be sawn by hand or supplied through contractors the revenue (from sleepers = Rs. 34,791 + the value of waste wood = Rs. 3, 00) would have amounted to Rs. 37,791. Deducting Rs. 10,178 on account of wages of the contractor the net profit would have been Rs. 27,013. The working of the saw mills has therefore brought a net profit of nearly Rs. 15,000 to Government.

The work of Government elephants was not satisfactory. One of them gave so much trouble and became so dangerous that he had to be destroyed. The value of work done was Rs. 4,033 and cost of upkeep Rs. 3,379. The net profit therefore was Rs. 654 only—a small amount.

The outturn of work done by Government buffaloes was even worse. The value of work done was Rs. 2,983 and the charge for their upkeep was Rs. 3,287 or a net loss of Rs. 304. Besides four animals of the value of Rs. 250 died in the year. This was chiefly due to want of supervision by the subordinates concerned.

Sind Circle.

The only departmental operations were for the supply of fuel to Government steamers on the Indus. The quantity supplied was 171,122 c.ft., value Rs. 4,703. The expenditure incurred was Rs. 4,454.

(ii) Purchasers.

Northern Circle.

The total value of the year's sale was:-

•			_	Rs.
Major produce	100	•••	•••	14,03,317
Minor produce		•••	•••	89,628

Central Circle.

Practically the whole yearly outturn of forest produce in the Central Circle including that obtained from exploitation of coupes, extraction of dead wood, exploitation of bamboos, grass and various minor forest produce, and the removal of royalty trees from malki lands, is obtained by the agency of purchasers and contractors.

The coupes offered for sale, those actually sold, and the receipts, are shown in the following statement:—

.1	Divisio	n,		No. of coupes offered for sale.	No. of coupes sold.	Receipts.
East Khándesl West Khándes North Khánde North Násik South Násik Poona Sátára	h	•••	•••	37 15 34 92 80 79 18	35 15 33 59 44 68 18	Rs. 22,250 10,453 43,851 10,840 14,755 44,076 9,927
•		Tota	al	345	272	1,56,152

There was an increase in the number of coupes offered for sale, the number of coupes sold, and the amount realized as compared with 1912-13. This is due to the sale in the year under report of many coupes of the previous year which had not found purchasers in that year. The reason for failure of many coupes to find purchasers in 1912-13 was given in the Administration Report for that year, and it is expected that in future all coupes offered for sale which contain exploitable material, will be taken up by contractors.

Royalty trees in lands outside forest were disposed of to the extent with the results shown as under:—

	Divisio	No. of trees sold.	Receipts.		
East Khándes West Khándes North Khándes North Násik South Násik Poona Sátára	${ m sh}$	•••	***	100 106,490 2,101 12,487 42,258 4,918 1,159	Rs. 101 1,04,085 472 2,685 36,745 4,918 1,207
		Tota	l	169,518	1,50,213

As compared with 1912-13 there was an increase of 11,276 in the number of trees sold and of Rs. 21,703 in the receipts. The bulk of the operations took place in the West Khándesh Division, and the operations formed the chief source of the revenue of that division. A decrease of the revenue following completion of removal of the trees need not however be apprehended, since regular exploitation of the forests is being suspended or curtailed whilst these trees are being disposed of.

Grass and grazing.—There is a very large demand in the Central Circle for grass both for cutting and grazing; the produce of the forests is therefore of great importance to the people and forms the most considerable item of the forest revenue. The receipts for each division were as below:—

Divisi	on.	Grass.	Grazing.	Total.
East Khándesh West Khándesh North Khándesh South Násik North Násik Poona Sátára	 Total	 Rs. 90,082 11,137 9,075 9,303 6,267 24,657 8,575	Rs. 37,843 11,113 23,695 20,075 33,173 16,113 16,081	Rs. 1,27,925 22,250 32,770 29,378 39,440 40,770 24,656 3,17,189

Compared with the previous year the receipts from grass show a decrease of Rs. 23,833, and from grazing a decrease of Rs. 20,094, i. e., a total decrease of Rs. 43,927. The decrease was distributed amongst all divisions and the reason of it has been correctly shown by the Divisional Forest Officer, North Khándesh, in his following remarks, which also indicates the extent to which grass in the forests is utilized locally:—

North Khandesh.—"The decrease in revenue from grass and grazing is due to the fact that there were good rains at the commencement of the year and a consequent abundance of fodder on revenue lands. Hence little grass was removed from the forests. Over 36,150 cart-loads of grass were removed from the forests on payment of 4 annas per cart and 3,232 cart-loads we re removed by right-holders. The total number of animals grazing in the forest during the year was 78,605, of which 60,833 grazed at full rates yielding a revenue of Rs. 23,695 and 17,772 animals were allowed to graze free, being a concession equivalent to Rs. 2,658."

The following remarks of the Divisional Forest Officer, North Násik, are also of interest:—

"The receipts from grass and grazing were Rs. 39,440 as compared with Rs. 45,562 in the previous year. There was a decrease of grazing fees by about Rs. 2,000 and a fall of about Rs. 4,000 in the kuran prices. The preceding year was a famine year in Ahmednagar and phenomenal prices for the kurans in Kopergaon and Chandwad were realized. In the year under report the conditions being better the demand was not so keen. The decrease under grazing fees was due to the villagers paying fees for one round only, on account of the better condition of the grazing."

The total number of cattle which grazed in forests in the Central Circle on payment of fees was 1,056,353 as compared with 1,150,294 in 1912-13. Free grazing was allowed to 49,763 cattle, being a decrease of 9,032 as compared with the previous year.

Bamboos were removed by purchasers to the number of 1,493,566, and Rs. 16,190 were obtained.

Receipts from other minor produce such as rosha grass, hirda, apta and tembhurni leaves were as follows:—

	Division.			Receipts.
East Khándesh West Khándesh North Khándesh South Násik North Násik Poona Sátára	000 000 000 000	•••		Rs. 1,610 3,459 3,666 4,449 6,819 4,491 10,264
		Tot	al	34,758

In 1912-13 Rs. 36,529 were realized under the above, so that the difference in the two years was slight. The receipts from hirda and rosha grass show a tendency to decrease yearly, the demand for the products becoming less.

Southern Circle.

Value of produce removed by purchasers was:—

	Produce.		Average of past	three years.	1913-	14.	
•	rroduce.	}	Quantity.	Value.	Quantity.	Value.	
	Major.		C. ft.	Rs.	C. ft.	Rs.	
Timber	***		580,014	1,91,704	846,131	2,61,033	
Fuel	•••		3,154,612	54,717	5,716,987	1,00,545	
	Total	•••	3,734,626	2,46,421	6,563,068	3,61,578	
	Minor.		No.		No.		
Bamboos	***	•••	4,739,446	50,902	4,913,066	55,497	
Grass and graz	ing	•••	•••••	71,425	*****	65,570	
Other minor pr	roduce	r=.	•••••	61,340	*****	. 59,848	
	Total	•••		1,83,667	••••	1,80,915	
•	Grand Total			4,30,088	707164	5,42,493	

The increase in "Timber" removed by purchasers is due to the new method of exploitation introduced in the Belgaum division by which a contractor purchased the trees standing in high forest series XIX, which, until last year, were worked out departmentally. A greater number of fuel coupes sold and higher prices obtained account for the increase under "Fuel". The general seeding of bamboos during these last years will render the supply very scanty for some years to come; there was therefore a very large demand this year. The grazing revenue is a varying item as it is enhanced or remitted according to bad or good forest protection. The reasons for the decrease in "Minor Produce" are the same as given under "Exploitation"

Sind Circle.

The sales of coupes and dead-wood were as under:—

Division,				Number of coupes and dead-wood lots.	Area exploited.	Value realized.
Sukkur Lárkána Hyderaba Jerruck	d	***	•••	Coupes 59 Burnt area compartments 187 Coupes 41 Dead-wood lots . 4 Coupes 28 Dead-wood lots . 8 Coupes 13 Dead-wood lots . 3	A. g. 6,257 4 8,475 19 3,543 19 1,118 16 3,166 38 3,160 13 2,115 9 989 9	Rs. 60,000 18,730 3,085 96,051 17,700 } 80,236
		Total of 1913-14	•••	9*4	28,826 7	2,75,805
		Total of 1912-13	•		24,623 35	2,78,979

Although the area to be exploited increased by 4,202 acres, the revenue realized practically remained the same; this was due to there being no competition and the glutted condition of the market in the Sukkur division.

The revenue realized by sale of fuel under the permit system was Rs. 9,732 against Rs. 12,225 last year. The decrease is mostly in Sukkur division where most of the gháts are; most of the revenue was realized at the Shikarpur ghát; very little was realized at Rohri and Sukkur and the question of closing down the Sukkur ghát is now under consideration.

Grazing.—The grazing fee collection was as under:—

,				1912-18.	1913-14.
				Rs.	Rs.
Sukkur Lárkána Hyderabad Jerruck	***	•••	•••	11,639 6,721 13,000 6,487	10,498 6,721 14,626 5,648
		Tot	al	37,847	37,493

As decided by the Sind Forest Conference held in June 1913, and sanctioned by the Commissioner in Sind in his No. 4179, dated 19th December 1913, contracts for grazing were given out in some ranges as an experimental measure in Sukkur in Hyderabad Divisions. The experiment, however, has not been a success on account of the friction that was set up between forest subordinates and the contractors owing to the failure of the latter to carry out the works required to be done by them under their agreements except under repeated pressure. Financially also the contracts were not profitable.

The system of collecting grazing fees by treasury chalans was tried in the Kandiáro and Tatta Ranges of the Larkána and Jerruck divisions. The object in view was to prevent the frequent passing of money between graziers and forest subordinates of the lowest rank and to ensure the grazing revenue reaching its proper destination. The experiment was not a success; in Kandiáro the maldars went to see the Deputy Conservator in charge Sind Circle and said that the treasuries were too far off to go to and that it would mean four days absence from their families, etc. Several of the maldars had already removed their cattle from forest altogether and consequently Mr. Oliver allowed them to pay their fees to the Range Forest Officer on the definite understanding that they were to pay fees to the Range Forest Officer and no one else. The recent changes in the Sind grazing regulations advocated by the Forest Conference of June 1913 and subsequently sanctioned by the Commissioner in Sind have the distinct advantage of one payment for the whole season and not a series of periodical payments of grazing fees to illiterate round guards; the work in future will be entirely in the hands of the Range Forest Officer, no subordinate being allowed to collect grazing fees.

Minor Forest Produce.—The sales of farms of forest produce and the assessment levied for lands leased out for cultivation compared with the figures of the last year are:—

		 · }	1912-13.	1913-14.
Lac Babul pods Grasses Fishery Cultivation	•••	 	Rs. 4,600 26,691 3,789 4,500 20,035	Rs. 51 19,568 3,903 5,209 18,432

The poor babul crop in the Hyderabad and Jerruck divisions accounts for the major part of the decrease. The disappearance of lac from the Hyderabad and Jerruck forests also causes a fall in revenue under this head, but steps are being taken to propagate lac in these two divisions, so far with not very much success.

(iii) Rights and Privileges.

Northern Circle

The value of the produce removed under privileges was:-

				Rs.
Timber	***	•••	114	2,29,3 60
Fuel	***	•••	•••	2,55,460
Bamboos	•••	•••	***	16,650
Grass and grazing		•••	***	2,44,645
Other minor forest pr	oduce	•••	•••	64,760

Central Circle

The value of produce removed by people free under privileges is estimated at Rs. 52,476. This shows an increase on the previous year when the estimate amounted to Rs. 46,973. In South Násik the people are allowed to take deadwood for fuel for their own consumption and for agricultural purposes throughout the division. In Peint this concession has been extended and the people are allowed in addition to sell dead timber. Most of the offences reported under illicit cutting in Igatpuri, Násik and Dindori are due to abuse of this privilege, and perpetual hacking of trees in order to manufacture dead-wood is the worst outcome of the privilege. Every effort was made to make the people understand the tahal cutting rules, demonstrations being freely given by the District Deputy Collector, Sub-Divisional Forest Officer, Mámlatdár, and Circle Inspectors when representatives from all quarters of the táluka were present. Though very little success is visible there are signs that the demonstrations were not altogether a failure. In Kulwandi round of the South Peint Range, the people have shown much progress.

Southern Circle.

Right holders do not exist in this circle, and there are no means of recording with any pretence to greater accuracy than formerly the value of forest produce removed under privileges. The following is a repetition of the figures of past years:—

	~ .	1913-14.

(iv) Free Grants.

Northern Circle.

Free grants to the value of Rs. 10,410 compared with Rs. 5,221 in 1912-13 were made. In Panch Maháls alone, on account of the destructive floods which occurred on the banks of the Mahi river and along the western boundary of the Godhra Range, free grants valued at Rs. 6,343 had to be given for re-building houses.

Central Circle.

Free grants of forest produce were made to deserving persons to the value of Rs. 8,291 as compared with Rs. 7,342 in the previous year.

Southern Circle.

The following statement shows the quantity and value of produce granted free during 1913-14 as compared with the average of past 3 years:—

	Produce	.		Average of three years		1918-14.	
	7101400			Quantity.	Value.	Quantity.	Value.

N.B.—The following figures of Famine Fodder Operations are included :-

Rs.
Revenue 891
Expenditure 1,397

The revenue and expenditure of 1913-14 includes the following figures on account of the sale of forest produce on lands not managed by the Forest Department:—

			•		${f Rs.}$
Revenue	•••	• • •	•••	***	2,84,553
Expenditure	•••	•••	•••		10,422

A surplus of over 10½ lákhs for this circle is extraordinary.

Good prices were realized for coupes in all divisions also for the gurcheran teak in Thána. Most of this money was obtained in Thána. At the same time, Surat, Panch Maháls and Kolába—the divisions which have for years been worked at a deficit—all show a solid surplus. None of these three divisions have been fully developed and further increase in revenue may confidently be expected from them.

In Thana the revenue is altogether out of proportion to the very meagre sum expended on these forests. The fact is the forest establishment is too fully occupied in attending to the exploitation of the forests and owing to the unhealthiness of the district, the forest officers are frequently changing and none have sufficient knowledge of the jungles to be able to carry out schemes of improvement. Planting too can only be carried out in the rainy season, and the heavy rains, and great difficulties of getting about the district in the monsoon, prevent forest officers from superintending these works. Similarly constant changes owing to sickness check all schemes for improvements in roads, etc.

The following statement compares the receipts and charges in details of budget heads for the years 1912-13 and 1913-14:—

	Budget ho	nd		1912-18.	1913-14.	Difference,

Central Circle.

The financial results of the year (excluding the Famine Fodder Operations), as compared with those of 1912-13 and with the average of the preceding five years were as follows:—

Revenue and Expenditure.	Revenue and Expenditure.			1913-14.	1913-14 Increase or decrease.
Revenue	•••	Rs. 8,52,473	Rs. 8,24,994	Rs. 9,00,675	Rs. +75,681
(A	•	2,12,936	1,45,904	1,56,276	+10,372
Expenditure ••• {B	•••	3,96,795	4,27,822	4,09,762	18,060
Total Expenditure	•••	6,09,731	5,78,726	5,66,038	-7,688

The gross revenue compared with that of the previous year was higher by Rs. 75,681 and the gross expenditure under A—Conservancy and Works and B—Establishments combined was lower by Rs. 7,688. The surplus revenue of 1913-14 amounted to Rs. 3,34,637 and was higher than that of the previous year by Rs. 83,369. The proportion of net revenue to gross revenue is 37 per cent.

The increase in revenue is chiefly under Ie.—Grass and Minor Forest Produce, and IIa.—Timber. The increase under the former is largely due to the fine crop of mhowra seed and under the latter to the higher prices obtained in the sales of coupes and of royalty trees in waste lands in Khándesh.

There was a decrease in receipts under IId.—Grazing and fodder grass—due to the decrease in the demand for grass from forests on permits.

The following remarks of Divisional Forest Officers are recorded:-

East Khándesh.—Owing to big profits reaped in 1912-13 for famine fodder there was wild speculation at the sale of kurans and closed areas in 1913-14 and prices which had jumped from Rs. 35,000 to Rs. 75,654 in the former year went to Rs. 86,431 in the latter. This was somewhat discounted by a fall of Rs. 5,099 in grass permits in the year under report, and still further by a fall of Rs. 12,000 in grazing owing to the absence of outside cattle, being a year of plentiful fodder.

West Khándesh.—The net receipts show a satisfactory increase of Rs. 43,457. Rather more than half this amount, i. e., about Rs. 24,000 is due to the good crop of mhowra seed, of which large quantities were collected and disposed of at a good price. During the previous year practically no income was obtained from this source, as the crop was exceedingly poor.

Timber again showed tendency to rise, and there was keen competition among all contractors especially for those lots situated near the Tapti Valley Railway. This rise in prices is responsible for the remaining increase in revenue, that is for about Rs. 19,000.

Poona.—The receipts amounting to Rs. 1,18,590 gross and Rs. 44,062 net were the highest on record for the Poona division.

The increase in expenditure under A—Conservancy and Works was mainly under A Ie. and A VII a, b and was due to the following causes:—

A Ie.—The larger crop of mhowra seed entailed higher expenditure in collection.

A VII a, b.—Due to the expenditure of the subvention grant of Rs. 19,500.

The decrease in the expenditure under B—Establishment was due to savings effected in the pay of officers on leave.

The following are the probable figures of revenue and expenditure in connection with famine fodder operations. The expenditure includes debits to operations of 1912-13 which were charged in the year under report:—

					1912-19.	1913-14.
Revenue Expenditure	•••	•••	•••		Rs. 2,46,335 1,09,682	Rs. 58,046 73,370

The gross revenue and the surplus have again beaten any previous record. The following statement compares the revenue and expenditure of the year with those of the previous year and with the average of the preceding five years:—

Head.	Average of five preceding years.	1912-18.	1913-14.
Revenue	Rs. 15,47,706	Rs. 19,08,195	Rs. 20,18,753
Expenditure (A	5,89,853	6,34,101	7,26,496
{ B	3,30,097	3,76,445	3,64,494
Total, Expenditure	9,19,950	10,10,546	10,90,990
Surplus	6,27,756	8,97,649	9,27,763

The above will show that there was an increase in the receipts, expenditure and surplus of the year. The surplus of revenue over expenditure is shared by all the divisions except Kánara, S. D. and Ratnágiri. The percentage of net to gross revenue decreased slightly from 47 to 46.

The following statement compares the receipts and charges of the year in

according to budget heads with those of 1912-13:

		Amoun	t. 	Differen ee.
Budget be	ead.	1912-13.	1913-14.

	Total B	3,76,445	3,64,494	— 11, 951
r	otal, Expenditure	10,10,546	10,90,990	+ 80,444

Revenue.

The favourable conditions of the market for timber and sandalwood and larger quantities of fuel exploited during the year were the causes for the increase of revenue under I. Due to the failure of the road train the material offered for sale at the Tavargatti depôt was limited, in fact less than normal; otherwise the revenue would have been still larger. The increrse under II was due to the better prices obtained for the timber and fuel coupes sold standing. The small increase in revenue from confiscations needs no explanation being a fluctuating item. The increase under "Miscellaneons" was chiefly due to the contributions received from the District Local Board, Belgaum, for repairs to roads and to the fines inflicted on contractors for breach of contract terms.

Expenditure.

. The payment of contract wages for timber of the previous year, the increased number of sleepers delivered and the larger quantity of fuel paid for during the year account for the increase under A-I. Laying out a greater number of coupes and reserving standards therein increased the expenditure under A-II. No cattle or machinery was purchased as was done in the previous year: hence the decrease under A-VI. Special grants for the strengthening of Kánara roads and more buildings constructed during the year swelled the expenditure under A-VII. The small increase under A-VIII is due to special outlay on casuarina plantations on the Kánara coast. Fewer rewards to informers and detectors, and fewer articles of uniform account for the decrease under A-IX. The absence of three Imperial officers on long leave accounts for the decrease in expenditure under B,

The percentages of value of major and minor produce to the total revenue of the year were 87 and 13 respectively.

The percentages of expenditure on constitution, works, improvement and establishment to the total expenditure were:—

		Oharges.	Percentages.			
	A	<u>.</u>			Rs.	.,
Extension and con Improvement Exploitation	stitution	•••	•••		5,468 1,4 5 ,928 5,75,100	1 20 79

	٠.		Total B		8,64,494	, 100

Ten items amounting to Rs. 469-5-0 were written off as irrecoverable revenue during the year under the orders of the Conservator.

The outstandings of revenue at the opening and close of the year were Rs. 4,74,258-10-6 and Rs. 3,93,773-8-0 respectively.

The outstandings due to the department from contractors and disbursers amounted to Rs. 1,71,071-11-8, and the amount due by the department was Rs. 321 against Rs. 1,65,077-15-7 and nil respectively in the previous year.

The estimated value of timber and other produce in depots rose from Rs. 4,84,578 to Rs. 10,71,847 and of live and dead stock from Rs. 3,71,678 to Rs. 3,91,184.

Sind Circle.

The revenue and expenditure of the forest year compared with those of the preceding year and with the average of the past five years are as under:—

	Неа	d.	-	Average of past 5 years.	1912-18.	1918-14.
Revenue	•••	· • • • • • • • • • • • • • • • • • • •	•••	Rs. 4,14,774	Rs. 4,55,699	Rs. 4,14,151
Expenditure Do.	•••	A B	•••	52,790 1,43,512	42,140 1,72,574	47,81 <i>5</i> 1,76,498
	Tota	al Expenditure		1,96,302	2,14,714	2,24,313
Surplus	•••	•••	•••	2,18,472	2,40,985	1,89,838

Except in Jerruck where there was an increase of Rs. 3,838 all other divisions show decreases in revenue. The reasons for the decrease are:—

Sukkur Division.—The decrease of Rs. 12,542 in the gross revenue was due to the low prices received in the coupe-sales.

Lárkána Division.—The decrease of Rs. 2,113 was due to no burnt area being sold during the year.

Hyderabad Division.—The decrease of Rs. 32,087 was due to:—

(a) Smaller area of erosion strips sold during the year under report.

- (b) No burnt area required to be sold during the year under report.
- (c) No lac available for sale during the year.
- (d) Sur-reed contract fetched Rs. 400 less during 1913-14.
- (e) Babul pods contract realized Rs. 10,676 less during 1913-14 owing to the scanty pod crop.
- (f) Cultivation realized Rs. 282 less during 1913-14.

The increase of Rs. 5,675 under A.—Conservancy and Works is due to the construction of new quarters for Range Forest Officers in Hyderabad and Jerruck divisions and the extensive irrigation works undertaken during the year under report.

The increase of Rs. 3,924 under B.—Establishment is due to :—

- (a) Increased pay to officers of the Imperial and Provincial Services under the time-scale.
- (b) Transfer of Mr. A. C. Robinson, Extra Deputy Conservator to Sind.
- (c) Payment of leave allowance to Mr. V. R. Mirchandani, Extra Assistant Conservator of the Central Circle, from Sind Circle.
- (d) Payment of incremental pay to the clerical establishment under the time-scale.

The revenue and expenditure of the year are further classified as follows:-

I.—REVENUE.

	Part	Receipts.	Percentage.			
		,	•		Rs.	Rs.
Minor produce	•••	***	•••	•••	3,16,981 97,170	7 7 23
			То	tal	4,14,151	100

Particulars.					Charges.	Percentage.
Extension and con Improvement Exploitation	stitution •••	•••	 Tota	 ••• al	Rs. 40,094 7,721 47,815	Rs. 84 16

III.-EXPENDITURE B.

	Partic		Charges.	Percentage.		
Administration Executive Protective	•••	•••	***	•••	Rs. 30,031 74,818 71,649	Rs. 17 42 41
	•	,	Tot		1,76,498	100

The revenue outstanding on 30th June 1914 was Rs. 1,51,427 against Rs. 1,47,986 on the same date last year. This represents instalments payable by coupe contractors and others, which are not recoverable until after the close of the year.

Bhai Jethmal Wadhumal still owes Rs. 6,500 for the lac contract of the Jerruck division for 1908-09. The appeal preferred by his surety Lekhraj Khimandas in the court of the Judicial Commissioner of Sind, as mentioned in the last year's report has not yet been decided and pending its decision no further action can be taken by the Collector of Hyderabad.

A sum of Rs. 3,038-4-0 is due from Chandiram Karamsing for a coupe contract of 1909-10 in the Jerruck division. The proceedings for the recovery of money have been suspended pending the disposal of the appeal filed by Chandiram in the court of the Judicial Commissioner of Sind.

CHAPTER IV.

ADMINISTRATION.

Northern Circle.

The administration of the Northern Circle was carried on by the following officers during the year:—

1st July 1913 to 24th October 1913 ... Mr. G. R. Duxbury.
25th October 1913 to 17th April 1914 ... Mr. O. H. L. Napier.
18th April to 30th June 1914 ... Mr. W. E. Copleston.

Mr. R. P. Dalley joined the Imperial Forest Service during the year and has been placed under the Divisional Forest Officer, Central Thana, from 29th November 1913.

Mr. F. X. Saldanha was appointed a Probationary Extra Assistant Conservator in October 1913.

Amongst Rangers, Mr. Sheikh Usman Sheikh Idrus and amongst Foresters, Messrs. G. B. Deshmukh and B. Y. Salvi and out of the office establishment, Messrs. Sohoni, Head Clerk, South Thána, and Lokare, Clerk, Direction Office, retired during the year.

Stipendiary student Mr. O. B. Parekh completed his second year's course of training at the Imperial Forest College, Dehra Dun, and reported himself for duty in April 1914 and was appointed Ranger on Rs. 50 grade.

The following table shows casualties during the year :-

Total staff.	Deaths.	Resignations.	Dismissals.	Retirements.	Suspensions.	Names struck off the list.
1,107	20	21	15	14	1	27

Fines were 270 and degradations 24.

13 students were sent to the Thana Forest Class during the year, of which 11 passed, 1 failed and 1 had to leave the class on account of illness.

The results of the year's work testify to the work of the Divisional and Sub-Divisional Officers. In South Thana division there was constant friction, consequently progress there was not commensurate with that in the rest of the circle.

The Sub-Divisional Officers all worked well. Mr. Patel, L.C.E., in Godhra deserves praise for his building work, likewise Mr. V. G. Bhalerao carried out some very useful road work economically.

The Divisional Officers generally report well of their Rangers and Foresters Mr. S. N. Dubhashi in Central Dangs and Mr. Patkar in Umbargaon being especially mentioned for their hard work throughout the season and among the Foresters Mr. C. K. Amin and Mohanji Gandabhai worked especially well.

The work of the clerical establishment was satisfactory throughout the circle.

The difficulty of recruiting reliable beat guards is unfortunately more marked year by year and the work of the lower protective establishment was far from satisfactory. This is especially the case in the Thána and Kolába divisions.

Much valuable assistance was given by the Revenue Department, and in the Kolába division police patels and talátis were first informants in several forest offences. In Thána and Kolába where the agricultural population is so mixed up with the forests and where the crops are dependent on a plentiful supply of ráb, co-operation between the Forest and Revenue officials is a matter of the utmost importance.

All divisional offices except Surat were inspected during the year.

Central Circle.

Mr. G. P. Millett, on return from leave, resumed charge of the Central Circle from Mr. L. Napier on 18th October 1914.

The West and North Khándesh divisions were throughout the year in charge of Messrs. Sothers and Starte respectively.

The East Khándesh continued to be held by Mr. Milne for seven months. Mr. Fisher then took charge of the division on his return from leave and Mr. Milne was transferred to the Northern Circle.

North Násik was held by Mr. C. S. Dalia throughout the year except for one month during which he was absent on privilege leave.

South Násik continued to be held by Mr. Gilbert until 1st April 1914 when he proceeded on leave and Mr. H. A. Bhadbhade then held charge.

The Poona division was held by Mr. D. A. Thomson until the end of March 1914, when he was appointed to act as Deputy Conservator, Sind Circle, and handed over charge of the Poona division to Mr. T. N. Koppikar, Extra Assistant Conservator.

The Sátára division was held by Mr. W. A. Wallinger, Extra Deputy Conservator, until 22nd January 1914, when he proceeded on leave on medical certificate and subsequently retired. Mr. R. V. Pethe, Extra Assistant Conservator, succeeded him.

The Working Plans division was held by Mr. A. F. Gonsalves, Extra Assistant Conservator, throughout the year, except for about 3 weeks during which he was on privilege leave.

Protective Establishment.—The temporary surveyors were made permanent and amalgamated with the protective establishment under the sanction of Government Resolution No. 3602, dated 4th October 1913, Financial Department. This caused an increase of expenditure of Rs. 20 per month, i.e., Rs. 240 annually.

Office Establishment.—Two permanent junior clerks on Rs. 20 per mensem each were added to the office establishment (vide Government Resolution No. 1170, dated 17th March 1914) replacing two temporary clerks on Rs. 30 and Rs. 20 who had been employed in the Working Plans Office.

Imperial Forest College, Dehra Dun.—Mr. D. G. Sane, the student deputed for training as Ranger, 1912-14, returned from Dehra Dun, with the Higher Standard certificate with Honours and stood 1st out of 31 students who passed the Final Examination.

Mr. H. C. Shah, the student deputed for training as ranger, 1913-15, was withdrawn from Dehra Dun Imperial Forest College on account of inability to follow the course.

Foresters' Class.—The Foresters' Class was held at Násik instead of at Poona and was opened on the 16th June 1913 under the control of Mr. Bhadbhade, Sub-Divisional Forest Officer, South Násik, and supervised by Mr. Gilbert, Divisional Forest Officer, South Násik. There were 18 students, three of whom were private. The fifteen Government students were two Foresters from each division of the Central Circle and three Foresters from South Násik.

The civil suit instituted against Mr. Pethe, Extra Assistant Conservator, by a contractor of the Ambegaon Range in the Poona division was withdrawn by the contractor with the consent of the district Judge, Poona, who awarded costs to the defendant Mr. Pethe.

Criminal Offences.—A forest guard in Kalvan of the North Násik division was prosecuted under sections 166 and 167 of the Indian Penal Code for letting off some cattle from those he had caught, and for submitting an incorrect first report. He was sentenced to 2 months' simple imprisonment and Rs. 25 fine in addition.

A round guard on Rs. 12 and a beat Guard on Rs. 10 in the South Násik division were prosecuted under sections 409 and 477 of the Indian Penal Code for mis-appropriation and under section 161 for receiving illegal gratification and were sentenced to 1 year and 6 months' rigorous imprisonments respectively.

The following table shows casualties during the year:—

Deaths.	Resignation.	Dismissals.	Retirements.	Total.
18	24	25	20	87

Four Head Clerks in the clerical establishment retired on pension.

Hunting and shooting.—Sixty-three shooting licenses were issued as compared with fifty-four in the previous year. An infringement of the shooting rules at Mahábleshwar was disposed of privately by the payment of a donation to the hospital.

As a consequence of the steps taken in the preceding year against systematic disregard of the game laws in Poona, there has been much improvement in this direction.

All the Divisional Forest Offices with the exception of South Násik were inspected during the year.

The Divisional Forest Officer, Poona, remarks that, recruitment of the protective establishment has continued to be a difficult problem. The class of people from which guards are generally recruited can earn more at Bombay and in the district itself in big works like the Tata Hydro Electric scheme, etc. Few literates come forward. A better class of men, morally and intellectually, than that already in service and than those that are available, is essential for the better protection and working of the forests. Such material can probably be had in future, if the minimum pay of a beat guard is at least Rs. 10 and his service is considered superior irrespective of pay.

The following remarks have been made by the Divisional Forest Officer, North Khandesh, who is also in charge of the Akrani pargana:—

"The Akrani pargana, which comprises 194,683 acres of reserved forest and 50,000 acres of revenue land, continued to be managed entirely by the Forest Department. At present there is no working plan for this forest. Indeed the material cannot be exploited until there are better means of communication. There is no cart-road leading from the plains of Akrani over the Satpura barrier, but the subject has now been taken up by the Public Works Department who propose to take up a metal road to Dhadgaon, from Taloda vid Kothar and Chanesli. The road is estimated to be some 33 miles long and to cost Rs. 2,47,500. A rough survey has already been made by the Forest Department of a road to Dhadgaon from Shahada vid Dara and Mandvi. It is somewhat longer than that vid

Chanseli, being about 40 miles in length; but the gradient is much easier. The Dara-Mandvi route weuld tap more valuable and more easily worked forests although the inhabitants of Akrani might prefer the Chanseli route since it is nearer to a good bazar (Taloda).

"Certain of the wells have been deepened and improved at Government expense, and the Rev. Franklin of Mundalwad has at his own expense erected tals across one or two streams so as to make some of his land suitable for rice cultivation. It is hoped that this will prove an interesting object lesson to the bhils and pawras who have already noticed the excellent crops which Mr. Franklin has obtained through using light steel ploughs.

"The experiment in cattle breeding which was started four years ago was continued. One bull was placed at Kundol in the north-west of the pargana and the other at Guria towards the south-east. Some 36 cows were collected altogether and remained from October to May. Although the calves which have been previously produced appear promising, the people are still unwilling to send their best cows. The sonkhairi bull at Kundol produced 5 calves of which one has died, and the thilari bull at Gauria produced 13 calves of which two have died. Out of the 15 calves which have survived 9 are strong and 6 moderate.

"The assessment received from cultivated lands at the rate of 1 rupee per plough amounted to Rs. 2,828, being an increase of Rs. 321 on last year.

"The collection of tagái outstandings made good progress and Rs. 6,889 were repaired. A few tagái outstandings amounting to Rs. 54 were written off under orders of the Collector, West Khándesh. During the year fresh tagái advances amounting to Rs. 9,250 were made.

"On the whole the people of Akrani seemed to be happy and contented, and the population is certainly increasing and more land being tilled.

All Divisional Forest Officers have worked well during the year and have striven to improve the efficiency of forest administration and of forest protection in their charges. The Sub-Divisional Forest Officers have also worked generally in an efficient manner.

The work of Range Forest Officers has not always been satisfactory. Whilst a few have worked well and earned commendation and merited promotion, there are some who have performed their duties negligently and have been degraded in consequence; and others whose work has failed to reach the standard required and to whom it has been necessary to administer warnings.

The work of the clerical establishment has been performed satisfactorily and carefully.

The relations of Forest with Revenue officers have been most satisfactory in all districts.

Southern Circle.

The charge of the circle was held by Mr. T. R. Bell throughout the year.

Messrs. Hodgson, Butterworth, Hiley, Satarawalla and Limaye held charge of Belgaum, Kánara South, Kánara West, Dhárwár and Bijápur divisions respectively throughout the year.

Mr. Edie, on return from leave, resumed charge of the Kánara E. D. on the 5th November 1913 and continued till the close of the year.

The charge of Kánara N. D. was held by Mr. Copleston until the 14th April and then by Mr. Edie in addition to his own.

The Working Plans Division was in charge of Mr. P. E. Aitchison until 9th October 1913 when he went on leave, and was held by Mr. Miller from the 10th November 1913 to the close of the year. In the interval the office was in charge of the Conservator.

The Ratnágiri Division continued to be in charge of the Collector.

There was no change among the Sub-Divisional officers.

The candidate deputed for the Ranger's course of 1912-14 at the Dehra Dun College completed the training successfully and reported himself for duty

on the 9th April 1914 with a Higher Standard certificate. Two more were selected for the 1914-16 course, underwent the usual 3½ months' preliminary training and joined the College in April 1914. One of them left the course soon after. The other is continuing.

The Belgaum Vernacular Forestry Class was, as usual, conducted by Mr. Hattangadi, Sub-Divisional Forest Officer, Belgaum, in addition to his own duties. There were ten men—all subordinates deputed from the several divisions of the circle of the ordinary calibre. Seven passed but none with credit; the highest number of marked scored was 455. Three were disqualified for cheating in the examination.

The Conservator visited all the divisions of the circle, Ratnágiri not excepted during the year. Three Divisional and three Range offices were inspected.

The year on the whole was a healthy one. Fifteen men—one Forester, 11 guards, 2 clerks and one peon died as against 16 in 1912-13.

Other casualties were: 16 retired and 33 resigned.

The number of subordinates who were punished during the year was:—1 Forester and 16 guards were dismissed; 1 Ranger, 4 Foresters and 28 guards were degraded; 15 guards were suspended; 2 Foresters, 5 guards and 2 clerks were discharged; 3 Foresters, 33 guards and 1 peon were suspended and 6 Rangers, 45 Foresters, 289 guards, 1 clerk and 4 peons were fined. 4 guards were prosecuted of whom three were convicted and one got off in the Sessions Court. The total number of subordinates punished was 460 or 41.5 per cent. against 36.4 during the previous year. The percentage of punishment in the Belgaum division was extremely high and Bijápur stands next.

The relations between the Forest and other Government departments were throughout most cordial.

Services.—

Gazetted officers.—All gazetted officers worked well. Mr. Edie has had a strenuous time since he took over from Mr. Copleston, the two Divisions he is in charge of being the hardest worked of the circle. Mr. Hodgson has been as energetic as ever and has made two working plans in addition to the rest of his work. Mr. Kotwal, among the Sub-Divisional officers, did his special duty work well; Mr. Hemmadi and Mr. Hattangadi also did good work.

Protective establishment.—There are few very satisfactory Rangers. Mr. Chandawarkar, Mr. Tuggarse, Mr. Rego and Mr. Gonsalves are about the best; Mr. Pereira who was also good has been deputed to Sávantvádi. There is hardly a single Forester that can be said to be first class and the guards are not much better in their degree, witness the large number of them that had to be fined.

Clerical staff.—The clerical staff is improving gradually; it is a good deal better now than it was six years ago. The Conservator's Head Clerk Mr. Bellare is very good and able; several of the Divisional Head Clerks are decidedly good and there are various young men coming on.

Sind Circle.

Mr. E. G. Oliver held charge of the Sind Circle from 1st July 1913 to 2nd April 1914 when he proceeded on 7 months' combined leave on medical certificate and Mr. D. A. Thomson was in charge for the rest of the year.

The divisions and sub-divisions were held by the following officers:-

Jerruck ... Mr. H. L. Newman whole year.

Hyderabad ... Dr. N. Gustasp whole year.

Lárkána ... Mr. M. D. Jagtiani whole year.

Sukkur ... Mr. A. C. Robinson whole year.

Sukkur sub-division

Mr. P. U. Malkani from 1st July to 6th August. 1913.

Mr. A. C. Robinson from 7th August to 3rd. December 1913.

Mr. V. R. Mirchandani from 4th December 1913. to the end of the year.

Working Plans Assistant, Mr. D. J. Navani whole year. Jerruck division.

Mr. V. R. Mirchandani, Extra Assistant Conservator of Forests, was transferred from the Central Circle to Sind Circle and posted to Sukkur sub-division.

Every division was visited and all the Divisional Forest Officers were examined by the Deputy Conservator during the year; all were in a satisfactory state and no irregularities of any importance were discovered.

The following Range Offices were also examined by the Deputy Conservator:—

$\it Range.$			Div	ision.
Mirpur	•••	•••	•••	} Sukķur.
Ghotki		•••		> Sukķur.
Sukkur		***)
Kandiáro		***	**7	Lárkána.
Unerpur	***	*	***	$\left. \begin{array}{c} \dots \\ \end{array} \right\}$ Hyderabad.
Hyderabad		•••	•••	··· }

The casualties of the year were as follows:-

Mr. P. U. Malkani, late Sub-Divisional Forest Officer, Sukkur, died on 12th October 1913, while on leave.

Mr. Vatanmal Suratsing, Clerk in the Hyderabad Divisional office, died of pneumonia on 10th September 1913.

Two forest guards in the Hyderabad division died, one from malarial feverand the other from paralysis.

The work of the Range Forest Officers with few exceptions is generally favourably reported on by the Divisional Forest Officers.

Of a total of 386 men punishments have been inflicted as shown below:—

```
      Dismissals
      ...
      9 or 2.3 per cent.

      Reductions
      ...
      ...
      18 or 4.7 do.

      Fines
      ...
      ...
      112 or 29.0 do.
```

There is no noticeable improvement or advance in efficiency among the lower ranks nor are these features to be looked for from the present class of recruit available in Sind. It seems impossible to get a good class of man for forest guards in Sind and very few indeed of the Sub-Rangers are able to read and write. Such men can earn more by working as coolies in the Public Works Department, where the rates of pay are higher and the present rate of pay will never attract the class of man required.

The work of all Divisional Forest Officers continued to be satisfactory during the year; and it is due to their exertions that some real progress has been made towards increased efficiency.

Mr. Lachiran Suratsing, the Head Clerk of the Circle Office, and the clerks under him did good and loyal work. The Divisional Forest Officers as a rule speak well of their office establishments but the Sindhi clerk is decidedly inferior to the clerk in the other circles as regards account work and more attention seems necessary to be paid to this matter which would obviate a large amount of correspondence of purely simple account objections. This is a matter of time and will be brought about by the gradual retirement of the older men whose education is necessarily inferior and the recruitment of men who have a modern education and a command of English and vernacular.

The relations between the Forest Department and other Government departments were amicable and satisfactory.

CHAPTER V.

GENERAL REMARKS.

Northern Circle.

Manganese Mining.—In the Panch Mahals the Bamankua mine was transferred to the Shivrajpur Syndicate.

The area known as the 'Dharia Talavdi Extension' measuring 506 acres and 31 gunthas was by arrangement abandoned by the Company and in exchange a prospecting lease measuring 530 acres was given in the Dharia forests.

A sum of Rs. 3,014 was paid to this department in royalties, etc.

Central Circle.

Owing to the scarcity of fodder, famine fodder operations had again to be undertaken by the Forest Department under the direction of the Senior Conservator. The supply of fodder was to the Sholápur District in large quantities and to Sátára District and Akalkot State in small quantities. The supply was obtained from the following sources:—

Sou	th Násik—	, ,				Pounds.

The reserve grass despatched by the Divisional Forest Officer, South Násik, came from the stacks of baled grass which had been left over from the operations of the previous year. About 10 lákhs of pounds had been stacked at Khardi in the Thána District and about 4 lákhs of pounds at Waki in the South Násik division. Owing to storms and heavy rains water penetrated the stacks and when these were opened in November the baled grass was found to be in very bad state and the greater part had to be rejected.

The grass obtained from contractors was supplied at the rate of Rs. 8 per 1,000 lbs. baled and delivered into trucks. The grass purchased for merchants at Talegaon in the Poona District was obtained late in season to meet further demand from Sholápur, after the famine fodder operations had been completed. The purchase rate was Rs. 6-4-0 delivered into trucks.

The full figures are not yet available but the probable receipts and expenditure under fodder operations in 1913-14 are as follows:—

Revenue ... 58,046
Expenditure ... 73,370

The Divisional Forest Officer, East Khandesh, remarks:-

"The bhil settlement in the Satpura requires to be entirely under management of the Divisional Forest Officer, who for that purpose might be given magisterial powers. Until this is done they are not likely to flourish or answer the requirements for which they were established. Given reasonable conditions of existance their number might be increased to great advantage."

Regarding this the Conservator has to remark that it would certainly be advantageous to administration if the same powers were given in the Satpuras to the Divisional Forest Officer, East Khándesh, as are possessed already by the Divisional Forest Officer, North Khándesh, in the Akrani.

Southern Circle.

Notwithstanding the defective monsoon and shortage in the stock of saleable timber at the important depot of Tavargatti the year was financially most successful, due entirely to the excellent prices obtained. This is evidenced by the figures of revenue both gross and net being even larger than those of 1912-13.

The seeding of the bamboos was nearly completed this year.

Nine villages in Yellapur constituting the Bilki Mahal and four in Dharwar named Devikop Mahal were handed over to the Forest Department for revenue management from 1st August 1913. By this change better cooperation of the people in forest matters is expected. It would be still more helpful if magisterial powers were conferred on the Assistant Collectors holding charge of such Mahals.

A survey has been run for a light tramway between Bhistanhatti Railway Station and Kumbarkop but estimates are not ready yet.

The Bajac windlass was not worked during the year owing to the difficulty of transporting it in the hilly country of Gund.

Only six monorail trucks were used during the year for transporting railway fuel. It is hoped that it will be largely used next year.

The working of the two saw mills in Northern Division, Kánara, has resulted in a net profit of Rs. 15,000 over what would have been spent if the works had been done by hand sawing.

The work of the Government elephants has not been profitable. The troublesome Manika was shot during the year as he had become dangerous.

The Government buffaloes worked at a loss, and four of them died.

The telephone lines were of great value and an extension of the system is under consideration.

New roads were made in the Kulgi Range opening up large and well stocked areas which were so long inaccessible.

Betta work in Siddápur is being pushed on, Mr. Hiley continuing to supervise the same in addition to his own divisional charge.

The work of assigning Soppu lands in coast talukas was provisionally closed under the orders of Government.

Experimental grass cutting for local consumption, opening a trade in charcoal manufactured from inferior woods, silage experiment and the collecting of silk cotton were not successful. Mr. Hodgson, however, expects success by repeating the experiments for a few years in succession. A similar attempt made with karanj seed attracted traders to bid this year and the contract sold for Rs. 500.

An "Effective Stove" has been purchased for burning the spines off prickly-pear so as to facilitate chopping; it is then mixed with cotton cake for cattle food. The result of the experiment will be reported on next year.

The services of forest guards on pay exceeding Rs.10 were ordered to be classed as superior with effect from 28th March 1914. The services of surveyors were brought on to the permanent establishment under orders of the local Government

Lantana.—It is alleged that it is possible to kill it by burning successively for three years in the hot weather. Experiments are being started in Belgaum on a selected spot and the result will appear in the succeeding year's report.

The Collector of Kánara has alluded to the divisions being overworked. They are overworked and a report upon the necessity of creating a fifth division in that district has been sent up prior to the submission of this report.

The Collector of Bijápur remarks about the prosecutions in forest cases. The Conservator has been through the division lately and it is most noticeable that the people care little for forest regulations. If offences were more heavily punished it might have a salutary effect. The forests of Bijápur are as good as forests can be in those parts where the soil is poor and stony and the rainfall is scanty. They are beneficial to the country and are improving rapidly under stricter conservation. Revenue is, in such a region, really of secondary importance; but, all the same, the division pays its way and is capable of improvement. The coupes sell very well and, with more encouragement and protection, will sell better in the future. The roads are bad and very rough which is against good prices. There is plenty of work for one officer. The division has been neglected in the past.

Sind Circle.

The Nausháhro Division was, with the approval of the Commissioner in Sind, renamed the Lárkána division as the headquarters of the division were removed to Lárkána from Hyderabad in November 1913. The change of headquarters renders the administration of the division more efficient as Lárkána is practically in the centre of the division whereas Hyderabad was about 80—90 miles outside it.

The amalgamation of the Viran and Ghorábári Ranges in the Jerruck division into one range with headquarters at Tatta was sanctioned during the year and experience so far shows that the arrangement is working well; it has also effected a reduction in clerical work and expenditure.

In accordance with an agreement entered into with the Deputy Assistant Director of Supplies, IV (Quetta) Division, 1,060,000 cubic feet of fuel were supplied to the Military Department at Quetta from the coupes of the Sukkur division by contractors, who took coupes from the Forest Department and were bound under the agreements to supply the above quantity during the cold season. As the Military Department is now able to make its own arrangements with contractors direct, the Military Authorities have signified their intention of not taking any more wood through the Forest Department.

Large quantities of timber, fuel and charcoal were exported from Khairpur State during the year and imported into the Sukkur and Larkana Districts with the result that the Sukkur market is glutted with fuel. The State authorities are getting rid of the old Shikar-Gahas (shooting preserves) and giving out the lands for cultivation. As long as this continues, a falling off in prices is inevitable for the next few years, after which things may be expected to right, themselves.

The matter of superfluous office work in the Range Offices is still receiving attention and the proposals of the Forest Conference held in Poona in September 1913 have been introduced in this circle as far as possible; these proposals all have the effect of reducing office work and at the same time increasing the efficiency of the department. The proposals made at the first Sind Forest Conference in June 1913 for new grazing rules for Sind were sanctioned by the Commissioner in Sind during the year and the same have been brought into effect from 1st July 1914.

The appeal preferred by Lekhraj Khimandas, surety of Bhai Jethmal, contractor for the lac contract of 1908-09 in the Jerruck division, is still pending in the Court of the Judicial Commissioner in Sind and pending its decision no steps can be taken by the Collector of Hyderabad for the recovery of Rs. 6,500 due to this department.

The appeal (as mentioned in last year's report) preferred by Chandiram, a forest contractor, in the Court of the Judicial Commissioner in Sind is still undecided and consequently pending its decision no steps can be taken for the recovery of Rs. 3,038-4-0 due to this department by the contractor.

SUMMARY OF PROGRESS DURING THE FIVE YEARS 1909-10 TO 1913-14.

Northern Circle.

Organization.—The chief changes that may be mentioned are:—The classification of divisions into major and minor charges; the permanent fixing of sub-divisions with a slight increase in the cadres of the Imperial and Provincial Services.

In 1911 "Time-Scale" promotion was introduced into the Provincial Service and in the same year the re-organization of the subordinate protective and office establishments was sanctioned. More recently the temporary survey establishment has been incorporated in the permanent protective establishment, increasing the cadres of rangers and foresters.

Lastly the services of guards on more than Rs. 10 count as Superior Service'.

All these changes improve the conditions of service in the Provincial, Subordinate (Protective) and Clerical branches.

Changes in area.—The area of reserved forest in charge of the Forest Department has increased by 114 square miles, while the area of protected forest has decreased by that amount.

This change took place in the Dangs (Surat):-

			at commencement of period. Sq. miles.	at close of period. Sq. miles.	
Reserved forest	•••	•••	2,074	2,188	
Protected forest		,	452	338	

Forest settlement.—The settlements are completed in all divisions.

			Sq. miles.
In 1909 the settled ar	ea in charge of the Forest Department was	•••	2,526
In 1914	it is	•••	2,526

Demarcation.—In 1909 about 5,591 miles of boundary lines were artificially demarcated. In 1914 the length totalled 6,040 miles. About 401 miles in Kolába remain to be marked out.

Forest surveys.—Nil.

Working plans.—In the Panch Maháls the Manganese mining operations necessitated the revision of the Hálol Working Plan. In the same division plans for the Dohad and Jhálod Ranges were sanctioned.

The Divisional Forest Officer, Surat, has got through a lot of field work in connection with the Dang forest plans, and working plan for the North Dangs has just been printed and submitted to Government; also a preliminary plan for the South Dangs has been approved by the Conservator. The revision of the Thána working plans is progressing.

Area under working plans in 1909=1,740 sq. miles. Area under working plans in 1914=1,850 sq. miles.

Communications and buildings.—The programme of roads sanctioned by Government in December 1912 has been slightly modified in accordance with the requirements of the Dang working plans.

The roads in the Thána District are to be constructed by the Public Works Department, while the Dang roads are constructed by the Forest Department.

The average annual expenditure during the five years ending 1908-09 was Rs. 5,366.

Whereas during the five years under review the average has risen to Rs. 8,733, an increase of Rs. 3,367 per annum.

In six ranges offices and quarters for the Range Forest Officers have been constructed, also numbers of round and beat guards' quarters have been built. The average annual expenditure for five years ending 1908-09 was Rs. 23,438., for the five years ending 1913-14 it is Rs. 23,953, an increase of Rs. 515 only. The average annual cost of wells, on the other hand, has increased from Rs. 1,885 to Rs. 3,373, a difference of Rs. 1,488.

Forest offences.—The average annual number of offences reported has risen from 4,240 to 4,693, an increase of 453 giving a rise of 10.6 per cent.

Cases of injury by fire have fallen from an annual average of 806 to 461, a fall of 345 or 42.8 per cent., while illicit fellings have risen from 2,086 to 2,757, a rise of 671 or 31.2 per cent; grazing cases increased from 1,039 to 1,248, a rise of 209 or 20.1 per cent. increase. The above figures are satisfactory in that they denote improvement in general protection of the forest by the subordinate staff.

Fire protection.—The average area under protection rose from 2,061 square miles to 2,464 square miles during the period ending 1913-14.

During the period ending 1908-09 the failures averaged 157 square miles or 7.5 per cent. Whereas now the failures average 60 square miles or 2.7 per cent. only and improvement has been shown year by year since 1908-09.

Every effort was made to enforce communal responsibility. Where protection was good, villagers were given free grazing, were allowed to cut and remove grass, and headmen were rewarded with presents of turbans. In some cases the fire-protection work was put into the hands of the villagers who were paid according to results.

Where fires were frequent and the villagers were reluctant to go out and extinguish them, communal punishments were resorted to, e. g., grazing fees were doubled, privileges suspended.

Protection from cattle.—During the period under review the average area annually open to grazing (browsers excepted) increased by 108 square miles or 6.9 per cent.

Out of a total area of 2,523 square miles, the average closed area decreased from 520 square miles to 506.

The average number of all animals admitted to grazing increased from 392,244 to 496,102.

Yield and outturn.—The average annual outturn for the two quinquennial periods compares as under:—

· · · · · · · · · · · · · · · · · · ·		Timber and fuel. Cubic feet.	Minor produce, Value, Rs.
1904-05 to 1908-09	•••	12,329,139	4,34,031
1909-10 to 1913-14		15,244,262	4,60,290

Financial results.—The average annual financial results for the last two five-year' periods are:—

•	Revenue.	Expenditure.	Surplus.
1904-05 to 1908-09 1909-10 to 1913-14 Increase per cent. =	Rs. 10,00,536 13,92,608	Rs. 4,78,014 6,48,730 36	Rs. 5,22,522 7,43,878 42

The increase in expenditure is chiefly due to the reorganization of the clerical and subordinate services. During the decade 1900 to 1910 there was very little increase in expenditure and the reorganization scheme had been pending for many years.

Privileges.—With such large quatities of charcoal and fuel required for the Bombay mills, etc., the villagers near the coast north and south of Bombay in # 1038—1

the Thana and Kolaba Districts find difficulty in obtaining firewood, etc., for their domestic use; hence for local supplies a certain number of coupes are now reserved every year.

It is hoped that these local fuel depôts will help to put an end to the

constant irregular hacking of the jungles.

In Thana and Kolaba Districts rules have been framed by Government for the proper cutting of "Tahal," that is, twigs and branches cut with the leaves on for the supply of manure.

With the assistance of the Revenue Department progress has been made in educating the people to preserve the leading shoots while lopping.

Central Circle.

This quinquennial period has been marked in the Central Circle by considerable progress in the efficiency of Forest Administration, as shown by the increase in the revenue and the amelioration in the condition of the people who have claims on the produce of the forest.

The policy of the Bombay Government has been the development of the resources of their forest property combined with relaxation to the utmost extent compatible with efficient administration of the stringency of the forest rules, and regulations. With these objects in view sympathetic consideration has been given to the requests of Forest Officers for the provision of funds for expenditure on communication and buildings (A-Conservancy and Works); and for improvement in the pay and prospects of menial and protective establishments (B-Establishments). The efficiency and honesty of subordinate establishments must necessarily be dependent to a large degree upon the payment to the members of a living wage and this has been secured to them. In respect of the amelioration of the condition of the people, it had become recognised by Government that extensive areas of lands, more especially in the eastern Deccan, which had been gazetted as forest following the introduction in 1878 of the Indian Forest Act, were not really fit for afforestation, and were required as grazing lands or for cul-Much of these lands had originally been cultivated and had been relinquished by the people in whose names they stood as a consequence of the famine of The limited success which had attended the efforts made by the forest Department by means of closure and plantation to produce tree-growth on the lands had been lost by the drought of 1899-1900 and succeeding years. On the other hand the extension of irrigation works, actual or projected, had made it essential to provide more land for cultivation to meet the growing demand; and the closure in turn against grazing of extensive areas, suitable for grazing, in the interests of tree production, had caused a great amount of impoundings of trespassing cattle, with the unavoidable concomitant of irritation to the local population. Government recognized that there was not anything in the Forest administration which could form the ground of any legitimate grievance, but they decided that some measures were called for to improve the condition of the people; and in Government Resolution No. 8752, dated 15th September 1909, it was directed that a committee should be appointed to report on certain The committee was accordingly appointed and made its report on 19th July 1910, and the result has been the transfer of a large extent of forest lands principally situated in the eastern Deccan to the Revenue Department for management. These lands were mainly to be retained as grazing grounds for the village cattle, only such as were suitable for cultivation and required for that purpose being disforested and assigned to selected tenants. The application of this measure and of the policy of Government generally is now having the desired effect.

There has been no forest legislation of importance during the past five years, but many important Government Resolutions have been issued in which the forest policy of Government has been displayed and developed. There has been no change during the period in the cadre of the establishment of Imperial Forest Officers or in the rates of pay and pension. A reorganization of the Provincial Forest Service has been introduced which has materially improved the pay and prospects of the officers. Time-scale pay based on length

of service has been granted to officers of the Extra Assistant Conservator class, and grade promotion in four grades introduced for officers of the Extra Deputy Conservator class. Also the number of appointments of probationary Extra Assistants has been increased to four.

The reorganization of the protective and clerical establishments have been effected. In the clerical establishment the pay of head clerks has been increased, and the pay of other clerks now called senior clerks has been regulated on time-scale, Rs. 25—2—75. Below these is a class of junior clerks on Rs. 20. In the protective establishment, the number of appointments of Rangers and Foresters has been considerably increased, and the pay of the five grades into which the respective cadres are divided has been enhanced. There has been a reduction in the number of forest guards, but the pay of the men has been increased.

The temporary establishment of surveyors has been abolished and replaced by a corresponding addition to the number of appointments of foresters, to provide for the entertainment of forester surveyors capable of performing the duties either of forester or surveyor.

There has been a decrease of about 78 square miles in the area of lands gazetted as reserved or protected forests, due to the disforestment of bare lands required for cultivation and which were more suitable for that purpose than for afforestation.

The area of forest under the control of the Forest Department, which had been decreased during the previous quinquennial period by the transfer of extensive tracts of reserved forest to the management of the Revenue Department following the tripartite classification, has been still further reduced by the transfer of about 520 square miles to that Department. This included nearly the whole of the forests of the Sholapur-Ahmednagar Forest division which division thus ceased to exist. What was left in charge of the Forest Department of the reserved forest of Ahmednagar was added mainly to the Násik District for forest purposes, and the district was then divided into two forest divisions, viz., South Nasik (including part of Ahmednagar) and North Nasik. The number of forest divisions consequently remained the same, but the administration has become more intensive. This remark applies to the Poona and Sátára divisions also, in which large areas of bare forest lands in the eastern parts no longer require the attention of the Divisional Forest Officer. These lands are to be managed by the Revenue Department as grazing grounds for village cattle. A change was made in the constitution of the North and West Khandesh divisions, certain areas of forest being taken from each and added to the other, so that the North Khándesh division now contains only forests north of the Tapti river and the West Khándesh only forests south of that river. The area of forest lands, reserved, protected and leased, now to be in charge of the Forest Department in the Central Circle, is 4,421 square miles; and the area of reserved and protected forest to be in charge of the Revenue Department 1,860 square miles, so that the total area under forest is 6,281 square miles. The handing over of the area intended to be managed by the Revenue Department has not yet been completely effected; it is being carried out as effective management becomes possible, and may be expected to be completed shortly. Forest settlement work has been completed except as regards scattered lands included in the forest demarcation area which are to be taken up for reserved forest as opportunities occur.

The demarcation of the boundaries of reserved forests now amounts to 14,988 running miles as compared with 14,295 miles completed upto 1908-09; about 857 running miles remain to be demarcated. The work is being pushed forward, but more rapid progress cannot be made on account of the difficulty in maintaining the establishment of surveyors at its full strength. Forest survey work was carried on in 1909-10 when 236 square miles were surveyed in detail on the 2-inch scale and 326 miles of forest boundary on the 4-inch scale. This work was done in the Khándesh District by No. 6 Party of the Survey of India.

From various causes the progress made in the provision of new working plans has not been very great. Several working plans have however been revised and some extensive areas of reserved forest had been organized under new working plans. All the working plans for the Satpura forest of Khándesh and the other forests of that range of hills lying to the west of the Satpuras require revision and this work is about to be undertaken. Other working plans works are projected, and provided an Imperial Forest Officer can be kept in charge of the Working Plans Division, a considerable advance in this important work will be made in the next five years. Owing to the necessity for clearing trees off lands outside forest which are being given out for cultivation, the exploitation of many forests has had to be held in abeyance to prevent not only an over-production of timber, but undue competition for the limited amount of labour available. This clearance of trees is now nearing completion and meanwhile the want of working plans for the forest areas has not caused any loss or embarassment in forest management. The extent of forests organized under working plans has risen during the past five years from 2,426 square miles to 2,540 square miles. This is out of a total area in charge of the Forest Department of 4,421 square miles. Of the balance, viz., 1,881 square miles, there are areas amounting to 1,410 square miles for which working plans are not required since the areas are not fit at present for any exploitation to be made in them. The forests for which working plans have yet to be prepared amount therefore to about 470 square miles only.

It is a part of the forest policy of the Government of Bombay to increase the expenditure on communications and buildings as the revenue from their forest property increases, thus preparing the way for still greater receipts. The average annual expenditure on communications, buildings and other works in the Central Circle during the past five years has been Rs. 14,329; and the expenditure during the last year of the period, 1913-14, has amounted to Rs. 51,759. There is still scope for the construction of forest roads on a large scale in order to develop the resources of the more distant forests.

It is satisfactory to be able to record that the forest policy of Government as already expounded has resulted in a decrease during the quinquential period in the number of forest offences which have required to be taken cognizance of annually in the Central Circle. At the beginning of the period the average annual number was 12,625. This has been reduced to 8,253. The decrease has been mainly in grazing offences and forest incendiarism, which were some of the objects aimed at in the measures which had been inaugurated. Cases of unauthorised fellings have decreased by 34.6 annually and offences of a miscellaneous nature (other than unauthorised felling, grazing and fires) were decreased by 28.7 per cent.

The efforts made by the Forest Officers with the assistance of the Revenue Officers to reduce forest fires have been rewarded with a large amount of success. In the preceding period the average number of forest fires and the extent of forest burnt amounted to 479 and 358,073 acres, respectively. These figures have now been reduced to 318 and 147,624 acres respectively. The expenditure on fire protection has risen from Rs. 9,544 in 1905-09 to Rs. 20,011 in 1913-14. The average area under fire-protection is 3,492 square miles.

As already shown the regulation of grazing in forests has met with much attention. The average area annually open to horned cattle is 3,565 square miles or 80.6 per cent.; and that open to browsers (sheep only, goats nowhere being admitted) is 1,791 square miles or 40.5 per cent. The average number of all animals for which grazing was given was 1,04±,745, showing an increase of 420,956 on the numbers of the previous quinquennial period. A change was made in the manner of collecting grazing fees, all fees being now collected by Forest Officers instead of by the village officers each for the cattle of their villages. This has led to more regular payment of fees and a decrease in impoundings. Owing to this measure and the other measures taken by Government as indicated already, the number of cattle impounded in 1913-14-was 79,510 only as compared with 162,864, the average number impounded in the five years of the previous quinquennial period.

The average annual outturn of the forests of the Central Circle in the present as compared with the past period has been as follows:—

	Timber and fuel. Cubic feet.	Bamboos, No.	Minor produce. Value, Rs.
1904-05 to 1908-09	4,081,392	1,333,094	55,170
1909-10 to 1913-14	4,726,276	1,152,100	1,29,382

The leading feature in the above figures is the increase in the value of minor forest produce extracted. This is principally due to the attention now paid to the collection of mhowra seed (bassia latifolia). The value of myrabolams and rosha grass shows a tendency to decrease annually.

. The average annual financial results of the present period and the preceding period were as under:—

	Revenue.	Expenditure.	Surplus.	
	Rs.	Rs.	Rs.	
1904-05 to 1908-09	6,25,488	5,35,928	89,560	
1909-10 to 1913-14	8,02,733	5 ,55,039	2,47,694	

These figures show that the revenue is expanding at a considerably faster rate than the expenditure so that a considerable surplus is now obtained. Further increase in the latter may be anticipated.

The training of Foresters is undertaken regularly at one centre in each Forest Circle during the rains, when selected men from each division in the circle are brought together and given a course of theoretical and practical instruction lasting over five months.

Southern Circle.

Changes in area.—The forest area increased from 4,591 square miles at the end of 1908-09 to 4,602 square miles at the close of 1913-14. These figures are made up as follows:—

					At commencement of period. Square miles.	At close of period. Square miles.	
Reserved		•••	•	•••	4,254	4,468	
Protected	•	•••'	•••	•••	337	134	
			Total	•••	4,591	4,602	

Forest settlement.—This five years' period saw settlement work practically completed, the last remaining areas being situated in the Kánara District. It has been found, however, that the old settlements were very badly done in many cases in that forest and cultivation were inextricably mixed up where it was altogether unnecessary and inadvisable to do so. These will have to be improved to avoid interference with the people and to afford better protection to the forests which are now, in most cases, organized and systematically worked for revenue. Steps have already been taken with this object in view in Belgaum and Kánara, but progress is and will be necessarily slow in the absence of a special Settlement Officer. Owing to the introduction of working plans in Dhárwár and Kánara, many waste numbers containing tree-growth have been put into forest in these last years and there are others which will have to be put in.

Demarcation.—The progress made in marking out artificial boundaries has been slow, only 114 miles as compared with 514 during the preceding period. The reason for this poor outturn was partly the want of trained men in sufficient number, partly the difficult nature of the lines remaining to be cut and marked. Much of the 213 miles of line remaining now to be done is over very hilly ground between British territory and that of Goa, Mysore, Sávant-vádi, etc.

Forest surveys.—No forest surveys were carried out in this circle during the last five years; the area has all been mapped by the Forest Topographical Survey and all the maps have been published.

Working plans.—Eight working plans were prepared and six were sanctioned; one was sanctioned from the preceding period; making seven introduced. Only three of these plans affected any considerable area, but the ground covered was hilly and difficult. At the commencement of the period the organized area in this circle amounted to 1,132 square miles, of which 661 square miles had been added during the preceding five years. The eight plans abovementioned cover 211 square miles and bring the total area organized up to 1,343 square miles.

Communications and buildings.—The expenditure under this head was Rs. 2,74,296 against Rs. 2,42,854 of the preceding period, that is an average annual outlay of Rs. 54,859 against Rs. 48,571.

There has been a substantial increase in expenditure under this heading owing to a more rapid development of the forests. This has rendered necessary the building of roads, the housing of the establishments, the digging of wells and banding of tanks to improve the water-supply and so on. Upon these depends to a large extent the possibility of further improvement in revenue. There is still much to be done. In the Belgaum division, hitherto quite neglected in these respects, considerable progress has already been made, and the result is already becoming apparent.

Forest offences.—The number of offences increased from 18,677 to 24,018. There was a slight decrease under "fire" and "miscellaneous", but those under "illicit timber cutting" and "grazing" increased nearly 50 per cent. The introduction of the new rules for the regulation of privileges in the reserved forest of Kénere in 1011 is responsible for this in next. reserved forest of Kánara in 1911 is responsible for this in part. Additional privileges were given under these rules in the forests set apart for the exercise of such, and people are allowed to take anything they want for their household or agricultural bond fide wants without reference to the Forest Department. As was foreseen at the time of their introduction by the local officers, the freedom has been abused continuously. Another reason for increase is the far stricter supervision of the betta assignments in Kánara by the Divisional Forest Officers owing to the possibility now within hail of bringing offenders to book departmentally instead of having to go through tedious suits in Courts which look upon contraventions of forest rules with a very lenient eye. In Belgaum also there is now very thorough insistance upon subordinates doing their work owing to the present Divisional Forest Officers' good management and energy. This naturally results in a large increase in cases reported. Altogether the working of the subordinate establishments in Kanara and Belgaum where the increases have taken place has been more satisfactory than heretofore, while still leaving much to be desired. The increase in grazing offences has been chiefly in Belgaum where formerly the supervision was very lax, but is now very strict. Gokák alone which has been recently brought under working plan would account for a large portion. A few years ago there were practically none reported in that place.

Protection from fire.—The results of special fire protection are as given below:—

•			1908-09. Sq. miles.	1909-14. Sq. miles,
Average area attempted	•••	***	1,375	1,600
Average failure	***	•••	201	108
Average net protected	***	•••	1,174	1,492
Percentage of failures	•••	•••	15 per cent.	7 per cent.

The improvement is due to the impetus given to protection by the interest aroused in it by conferences of the Presidency officers and by the sympathetic attitude of the Revenue authorities towards the question. Mr. Hodgson's system of fire-stations and drums was introduced with good effect; communal rewards and punishments were continued with very satisfactory results and the people are becoming more and more interested in protecting themselves as a consequence.

Protection from cattle.—Area open to grazing during the last two five years' periods was as under:

For the period ending
1908-09.

Area open to animals other than browsers
Open to browsers

957

3,851 sq. miles.
957

312

There has been little change in the area open to grazing of ordinary cattle; the area open to browsers, that is, goats and sheep here in this circle, for there are no camels, has been further reduced because the presence of such animals is altogether incompatible with forest conservancy of any sort. The Kanara system of a small all-round grazing fee of annas two for each head of cattle has been introduced in other districts and finds favour everywhere.

The decrease in the number of browsers allowed to graze in forest has been very slight; it was 9,062 in the preceding quinquennium as compared with 8,997 in the present one, though the area available for the animals was reduced by two-thirds. Other cattle increased from 364,785 to 420,093. The grazing regulations are at present very satisfactory in this circle.

Yield and outturn.—The average annual outturn of the forests for the two periods is as follows:—

•	Timber and fuel.	Sandal.	Bamboos,	Minor produce.
•	Cubic feet.	Rs.	No.	$\mathbf{R}_{\mathbf{S}_{\bullet}}$
1904-05-1908-09	7,806,809	28,207	3,067,208	1,09,734
1909-10-1913-14	2,478,849	31,877	4,634,799	1,43,691
	. ———			
Percentage of increas	es 21 %	13%	51 %	31 %

The full yield of wood in Kánara as laid down in working plans is not yet worked up to though the improvement has been considerable in this last period. Communications, labour and working have still to be perfected. The 21 per cent. increase under timber is nearly all due to improvement of communications and accommodation for establishments. This has more than counterbalanced labour difficulties which have been somewhat accentuated of late years. The revenue under sandalwood is due to greatly enhanced rates being offered for the produce in auction. The 51 per cent. increase in bamboos is due to greater ease of transport combined with a greater demand. This demand has been extending year by year, but the supply of material has been enormously reduced during the last few years by the nearly universal flowering and consequent dying down of all the species of bamboos in the Kánara and Belgaum Districts. The heaviest demand is for Dendrocalamus strictus which, luckily, takes only a few years to reconstitute itself as compared to the 33 or 34 required by the large Bambusa arundinacea. The increase in minor produce is altogether due to rise in the prices offered. Everything is going up in these days.

Financial results.—The average annual financial figures for the two periods are as given in the table following:—

		Revenue.	Expenditure.	Surplus.
1904-05-1908-09	•••	1,367,151	773,032	594,119
1903-10-1913-14	***	1,669,402	972,862	696,540
Percentage of increase	•••	. 22 %	26 %	18 %

The increase in revenue is due to the rise in price of teak, a growing demand for formerly unsaleable junglewoods and the increase in the intensity of the working of the forests. The rise in expenditure is half due to the improvement in pay and prospects of the subordinate establishments and also to the rise in the rates for labour.

General.—The reorganization of the subordinate establishments, which had been first proposed in 1886, was at last introduced in 1910-11. The

prospects of the Provincial Service were also materially improved by the introduction of time-scale pay.

New rules were framed by Government in their Resolution No. 10618 of the 19th November 1912 for the direct training of men for the Provincial Service.

The mining of minerals, especially manganese which at first attracted so much attention and led to considerable speculation in the last period, has almost, died out in this circle. Manganese here is not of sufficiently high grade to pay well.

A Fowler road train was purchased to supplement the transport in Kánara after a good deal of enquiry. It was a failure because of the insufficient thickness of metal on the roads and the consequent sinking in of the wheels and ploughing up of the surface which damaged the exposed bearings of the machinery by excessive wear from dust and grit. The engine is now being used to drive a saw mill which pays its way well. A Bajac windlass was also purchased and is a success for dragging logs up steep slopes inaccessible to elephants. A mono-rail purchased at the end of last period has not been a great success, but has been useful owing to the dearth of labour in the parts where it is used.

The shortage of labour in Kánara above-gáht divisions and in Khánápur in Belgaum has been very evident in these latter years, rates ruling very high. The men and carts obtainable are quite insufficient to deal with the work there is to be done so that arrears accumulate. The Northern Division of Kánara where the road train was tried is the worst off in this respect. The question of a forest steam tramway or light railway has therefore been mooted and enquiries are at present going on as to how much it will cost, etc.

The old Kánara saw mill has continued to yield a very good outturn, the converted waste wood, which was formerly burnt or left to rot but is now collected and brought in, paying by itself for the cost of running and upkeep. The mill's chief raison d'etre is the supply of teakwood sleepers to the Madras and Southern Marátha Railway.

Bad climate allowances were sanctioned by Government to subordinates serving in malarious places in Kánara and Belgaum. Permanent travelling allowances were sanctioned for Foresters instead of the former daily ones.

A grant of Rs. 10,000 in cash was sanctioned to the Local Board in Kánara in lieu of the frequent free grants of timber that used formerly to be made for repairs of roads, bridges and ferries, which used to cause some trouble and led to curious transactions among subordinates, as also to considerable damage to timber trees in the jungles.

Government Resolution No. 1550 of the 19th February 1910 sanctioned the allotment of soppu assignments in Ankola, Kumta and Honávar Tálukas of Kánara District. The assignment went on for some time, but certain difficulties having become apparent during the carrying out of the field work, it was found advisable to stop it pending further enquiries as to a method of working the scheme on a rotation basis.

The betta question came up again in Kánara, or rather it was continued, and a new way was proposed by the Collector of settling it once for all. This question has been going on now since the early seventies of last century and has given continual trouble to everybody in the district who had anything to do with the Sirsi, Siddápur and Yellápur Tálukas. The main question at present is to devise some way which will ensure the continuance and improvement of these supplementary holdings to the supari and spice gardens. The holdings are forest and are used by the garden holders for supplies of green leaf-manure and fire-wood. All new betta lands were resumed and individual assignments are being made, where possible, of areas formerly given en bloc to villages or collections of individuals; and permanent leases are now to be entered into with the Forest Department by the holders of all betta lands binding themselves to

observe some very simple rules which have been prescribed, which, it is hoped, will bring about the desired result.

The local school for Foresters is kept every year at Belgaum but the course is too short, the material is not of a right sort and the result is, therefore, not what is required.

As regards the policy laid down in forest matters by the Government of India, it has been adhered to in this circle during the last period. Efforts have been made and are being made to preserve hill tops and steep slopes from denudation by the curtailment of kumri or, where this is inadvisable or impossible straight off, by its regulation. Land in forest has been given out for cultivation where really necessary in all cases. The isolated small pieces of land surrounded by valuable forest have been or are being afforested gradually as occasion arises. Unimportant forest lands were put under the management of the Revenue Department formerly but it has been found necessary for the preservation of growth to replace them, in some cases, under the Forest Department. It may be necessary to replace more. Every endeavour has been made to satisfy all legitimate wants and requirements of the agricultural population in the most convenient manner possible, while preventing the areas from which supplies are drawn from deteriorating in quality of growth. The grazing rules have worked well by which owners of cattle have much more lattitude than formerly in the choice of area at a uniform rate of annas 2 per animal for the whole year. In all working plans made provision has been made for the exercise of all privileges.

Sind Circle.

Forest reorganization.—The reorganization scheme of the Subordinate Forest Establishment was sanctioned, vide Government Resolution No. 404 of 16th January 1911, and brought into force from 7th December 1910. The pay of the officers in the Provincial Service has been improved under a system of scale of pay based on length of service instead of promotion from grade to grade, vide Government Resolution No. 7050 of 24th July 1911.

Changes in area.—The reserved forest area in Sind under the control of the Forest Department has increased from 1,110 miles 178 acres to 1,139 miles 441 acres. These areas are classed as follows:—

				At commence the perio		At close the per	
Reserved Forest Protected Forest	•••		•••	Sqr. miles. 1,109	acres. 233 585	Sqr. miles. 1,138	acres, 496 585
	. •	Total	•••	1,110	178	1,139	441

Forest settlement.—Forest settlements have been carried on throughout all the divisions during the five years under report and the area finally settled at the close of the year amounts to 69 miles 515 acres as compared with 54 miles 349 acres at the end of the year 1908-09.

Demarcation.—The total length of artificially marked boundaries at close of the year 1913-14 amounted to 2,090 miles as compared with 1,917 miles at the commencement of 1909-10. This work is up-to-date in all the divisions.

Forest surveys.—During the first four years of the period under review, forest survey work was carried out by surveyors attached to each division which consisted of minor surveys such as river survey or rectification of boundaries; the total length surveyed amounted to 1,377 miles. In the last year of the period the Working Plans Assistant undertook the revision of the working plans of the Jerruck division consisting of 183 square miles, which was already organized in 1900-01, and in addition to this the organization of 31 square miles of area reserved since the introduction of the working plans. A revised working plans report for the Jerruck division is now under preparation and will be completed shortly.

During the five years the area brought under working plans remained the ame as during the previous period which was as under:—

				Sqr. miles	acres.
Sukkur Division			•••	420	468
Lárkhána Division	•••		•••	202	176
Hyderabad Division	•••			225	142
Jerruck Division	•••		•••	183	214
			-		~~~
		Total	•••	1,031	360

Communications and buildings.—The average annual expenditure on communications, buildings and other works amounted to Rs. 21,542 during the period under review as compared with 17,597 during the previous 5 years. The increase under this head is principally due to the fact that more attention has been paid to housing the subordinate staff and also to the fact that important works for irrigating the forests are being regularly proceeded with.

Forest offences.—The number of forest offences reported continues to increase. The average annual number during the five years under review was 3,474 as compared with 1,828 of the previous five years ending 1908-09. The average number of cases of injury to forests by fire have increased considerably during the quinquennium which were in all 193 cases as compared with 83 cases for the previous five years. Offences of unauthorized fellings and grazing increased by 69 and 99 per cent. respectively and offences of a miscellaneous nature increased by 52 per cent.

The increase in the number of offences reported is due to a greater insistence on the part of the Divisional Forest Officers that all offences must be reported; formerly the staff were very slack in this respect and it is not due to the fact that more offences are committed now-a-days as compared with former years.

Fire protection.—The average area under systematic fire protection during the period under review was 1,129 square miles 479 acres, the average of failure being 1.67 per cent. For the period ending 1908-09, the average area under protection was 1,092 square miles 459 acres, while failures amounted to 0.93 per cent. The increase in the area brought under fire protection during the quinquennium period is due to new reservations and accretions.

Protection from cattle.—During the period under review the average area opened to cattle, other than browsers, was 1,070 square miles and that opened to browsers was 575 square miles as compared with 958 and 495 square miles respectively during the previous five years. The average number of all animals admitted to graze was 83,933 in the previous quinquennium as compared with 59,221 in the period under review. Of the former number 61,967 and of the latter 42,558 were browsers so that there was a decrease amounting to close on 31 per cent. in the number of animals of this class admitted to pasture.

The decrease in the number of cattle of all kinds grazing in forest in the quinquennium under review is due to the babul pod crop having been a poor one for two years, abnormal rain in the hills and flooding of areas outside forest which cause the hill men and people with cattle living outside forest to graze in their own lands; good grazing in the hills always means a big drop in the number of outside cattle coming to graze in forest.

Yield and outturn.—The following statement shows the average annual outturn of the forests for the two periods:—

	_	•	Timber and fuel. C. ft.	Minor produce. Rs.
1904-05 to 1908-09	***	•••	15,159,642	75,754
1909-10 to 1913-14	•••	***	16,139,683	36,206

The average outturn of timber and fuel has increased by 6 per cent. owing to the fact that dead-wood had to be cut out over extensive areas under a sanctioned scheme.

The average revenue from minor produce has decreased by 52 per centprincipally due to the practical disappearance of lac from the forests of the Hyderabad and Jerruck divisions.

Financial results.—The average annual financial results for the two periods were as follows:—

		Revenue.	Expenditure.	Su rp lus.
		Rs.	Rs.	Rs.
1904-05 to 1908-09	•••	4,20,617	1,61,733	2,58,884
1909-10 to 1913-14	***	4,07,179	2,02,977	2,04,202

There is a decrease in the average gross revenue by 3 per cent. mainly due to less revenue realized from minor produce. The average expenditure shows an increase by 25 per cent. due to following reasons:—

- (a) Building houses for the forest subordinates.
- (b) Extensive irrigation works undertaken.
- (c) Increased pay to officers of the Imperial and Provincial Services under the time scale.
- (d) Increased pay of the subordinate and clerical establishment sanctioned under the reorganization scheme.

REMARKS OF THE COMMISSIONER, NORTHERN DIVISION, ON THE FOREST ADMINISTRATION REPORT OF THE NORTHERN CIRCLE FOR THE YEAR 1913-14.

No. 1-For.

REVENUE DEPARTMENT:

Ahmedabad, Shah-i-Bagh, W. D., No. 1, 14th October 1914.

The total forest area increased by the addition of 191 acres of reserved forest. The question of the resettlement of the Bulsár-Chikhli Range, to which reference was made last year, is still pending and it is hoped that the Conservator will take early steps to dispose of it. The working plan for the North Dangs has been completed and submitted to Government whose orders are awaited, while the preliminary working plan for the South Dangs, prepared by the Divisional Forest Officer, has received the Conservator's approval.

- 2. The total expenditure on roads and buildings amounted to Rs. 14,230 and Rs. 34,007, respectively, as compared with Rs. 13,002 and Rs. 27,354 in the preceding year. Fair progress in road construction was made in the Surat division where in addition to completing roads already in hand some new roads were economically constructed. In the Thána District road construction work needs attention and it is hoped some improvement will be recorded next year.
- 3. The total number of offences committed exceeded that of the preceding year as well as the average of the past three years. The increase is noticeable chiefly in Surat, Thána and Kolába. The number of forest fires rose by 108. Similarly, cases of unauthorised felling show an increase which is accounted for by better registration in consequence of stricter enforcement of the tahal rules.

The more liberal and practical grazing arrangements sanctioned in Government Resolution No. 9441, dated 16th October 1913, resulted, as was expected, in a decrease in grazing offences and the number of cattle impoundings fell in consequence by 3,542. Communal punishment for breaches of forest laws was inflicted in Thána and Kolába. The results of the measures adopted for the protection of forests from fire have not, it is reported, proved quite successful.

- 4. In consequence of the destructive floods in the Mahi river and along the western boundary of the Godhra Range, free grants of wood of the value of Rs. 6,343 had to be made in the Panch Maháls for the purpose of house building.
- 5. Financially the year has been markedly successful, the net surplus of income over expenditure being Rs. 10,64,215 (exclusive of famine figures) as compared with Rs. 7,96,332 in the preceding year. All the divisions in the circle contributed to this extraordinary surplus; the greater portion being derived from Thána. Surat, Panch Maháls and Kolába which for years past had been worked at a loss showed good surpluses.
- 6. There were three changes of Conservator during the year under report. The punishment roll of the protective staff was the lowest on record, being only 16 (15 dismissals and I suspension) as against 316 last year and 613 in 1911-1912.
- 7. Generally speaking the report is highly satisfactory and reflects credit on the Officers concerned.
 - 8. Commissioner's remarks on the Quinquennial Summary:-

It was unfortunate that there were no less than 7 different Conservators in 5 years. Several changes were made to improve the conditions of service. Some demarcation work still remains to be done. Manganese mining caused the revision of one working plan. Much more money is being spent on roads,

and about the same as before on buildings. The work of the subordinate staff has improved, as is evidenced by the figures of forest offences. Fires protection has distinctly improved, and the improvement has been steady. Grazing facilities were increased appreciably. The financial results were highly satisfactory. The reservation of coupes for the local supply of fuel north and south of Bombay is to be noted; and also the special tahal arrangements.

C. W. HUDSON, Acting Commissioner, N. D.

REMARKS OF THE COMMISSIONER, SOUTHERN DIVISION, ON THE FOREST ADMINISTRATION REPORT OF THE NORTHERN CIRCLE (ONLY SO FAR AS THE KOLÁBA DIVISION IS CONCERNED) FOR THE YEAR 1913-14.

No. S.R.-508 of 1914.

REVENUE DEPARTMENT:

Belgaum, 3rd November 1914.

The Commissioner has no remarks to offer on the Kolába forests.

H. S. LAWRENCE, Acting Commissioner, S. D.

REMARKS OF THE COMMISSIONER, CENTRAL DIVISION, ON THE FOREST ADMINISTRATION REPORT OF THE CENTRAL CIRCLE FOR THE YEAR 1913-14.

No. 4416 of 1914.

Poona, 28th October 1914.

The following review of the Administration Report of the Forest Department for the year 1913-14 is submitted to Government in the Revenue Department. The Conservator's report has already been submitted by that officer direct to Government.

- 2. The extent of land notified as "Forest" under the Indian Forest Act remained the same as in the preceding year, viz., at 6,280 square miles, but that under the management of the Revenue Department increased from 1,817 to 1,860 square miles, 28,171 acres of reserved forest in the Poona District having been transferred during the year from the Forest Department to the Revenue Department management. The delay in the transfer noticed by Government in last year's review has been satisfactorily explained as reported in this office No. 2034 of 30th June last.
- 3. One hundred and twenty-four miles of forest boundary were demarcated during the year at a cost of Rs. 1,000 against 143 miles at a cost of Rs. 1,234 in the preceding year. At this rate the completion of the work in South Násik where no less than 853 miles remain to be demarcated will not be effected within a reasonable period unless special arrangements are made.
- 4. During the year the revised working plan for the anjan forests of the Dhulia and Pimpalner Ranges was submitted and it was sanctioned in 281 Government Resolution No. 7829 of 22nd August last. Other miscellaneous, are work in connection with working plans was also done, but the Conservatorple for report shows that a good deal of original as well as revision work is moreless urgently needed and special arrangements should be made for the differ working of it. The Satpura reserved forests in the East Khandesh District and seventy Nandurbar and Navapur Ranges in West Khandesh demand urgent

and the Commissioner would only repeat the recommendation which he made last year for the appointment of a special officer.

- 5. As regards roads it is proposed to provincialize the Borzar Charanmal section of the Pimpalner-Navápur road in West Khándesh which was referred to in paragraph 3 of this office review last year. The work of constructing to in paragraph 3 of this office review last year. The work of constructing this very useful link between Navápur and Pimpalner was first begun by the Forest Department in 1906-07 and money was spent on it every year. But as it passed over a steep ghaut the limited amount which the Department could spend from year to year was largely wasted as the work done used to be washed away by the heavy rains. The only way to bring this useful link into a permanent and proper condition is to construct and maintain it by Public Works agency.
- 6. The statistics relating to forest protection show some improvement as the total number of offences shows a decrease from 8,643 in 1912-13 to 8,318 in 1913-14, a decrease of 3.7 per cent., but the number was greater than the average (7,982) of the three preceding years and it is regretable that the number of offences of injury to forests by fire was much larger than that of the preceding year and the average of the past three years as the following figures show:—

1913-14. 1912-13. Average of past three years. 582 220 404

The area burnt (142,268) was nearly four times that (38,288) burnt in the preceding year, but the explanation given by the Conservator, viz., larger quantity of grass in the forests, may account for the increase to some extent. The large increase in East Khandesh is however admittedly coincident with slack supervision and inspection. No serious crime is reported to have been committed during the year. Last year the Commissioner issued a circular to all Magistrates in the division with regard to the necessity of inflicting deterrent punishments in cases of forest fires.

- 7. The number of cattle of all descriptions (79,510) impounded during the year is stated to be the smallest on record and the reduction seems to be clear evidence of the appreciation by the people of the extended grazing privileges granted by Government in recent years. It is reported that from a misconception of the facts and the rules some people still evade payment of the low fees now charged till they are actually caught grazing their cattle in forests. Improvement may be expected in this matter in course of time when the liberal policy of Government and the disadvantages of breaking forest grazing rules are better understood.
- 8. The repeated failure of any useful results from the experiments for the production of lac shows that it is almost hopeless to expect any progress with the means at present available and employed.
- 9. The improvement in the receipts from hirda which amounted to Rs. 17,929 against Rs. 10,979 in the previous year is very satisfactory and must be due at least partly to the royalty system the continuance of which in the Rajur and Akola Ranges of the Nagar District was sanctioned in Government Resolution No. 10814, dated 28th November 1913.
- 10. The monsoon of 1913 was generally satisfactory and in consequence there was no demand for Government grass except from the Sholápur District, the eastern portion of the Sátára District and later in the year from the Akalkot State. Famine fodder operations, so far as departmental collection went, were not undertaken on any large scale, only $4\frac{1}{2}$ lakhs lbs. of grass having been collected departmentally in South Násik out of a total supply of $87\frac{1}{4}$ lakhs made through Government agency. The bulk of the grass was supplied from the reserves of 912-13, and by purchase from contractors. The total quantity of $87\frac{1}{3}$ lakhs was on thowever much short of that of 89.8 lakhs supplied through Government

8.v to affected tracts in the preceding year. The receipts in the year under It mounted to Rs. 58,046 and the expenditure to Rs. 73,370. It is stated in 5 years, latter amount includes debits to the operations of 1912-13 which were Some demark the year 1913-14. There is an absence of relation between the the revision of

figures of receipts and expenditure of the two years for which no explanation has been given in the report. The figures reported are:—

		1912-13.	1919-14,		
		$R_{s_{\bullet}}$			
Receipts	•••	2,46,335	58,046		
$\mathbf{E}_{\mathbf{x}}$ penditure	•••	1,09,682	73,370		

These figures seem to indicate that in 1912-13 Government made a large profit which was certainly not the fact. The Conservator is being asked to explain this apparent discrepancy.

The bulk of the grass was consumed in the Sholápur District which took 82 lakhs out of 87½. In Sátára only 4½ lakhs were taken and the Collector of that district reports that various causes operated to render the measures undertaken by Government for the supply of fodder comparatively useless. Such were the distance of the Koregaon depôt from the affected parts, the prejudice of the people against using it, coupled with a preference for kadbi even at a much higher price and their ability to grow fodder under wells with the help of tagai. He concludes that the failure of the operations proves the self-reliance of the people in the precarious tracts. The indispensable need and the usefulness of Government grass cannot, however, be underrated when a famine occurs over a large area. It is stated that owing to various reasons the 25 lakhs of lbs. of grass which should be in reserve with the Government contractor Mr. Bhiladwala at the beginning of 1914-15 is entirely wanting.

- 11. Excluding the famine fodder transactions the year's working resulted in an increase of Rs. 75,681 in receipts over those of the preceding year and in a decrease of expenditure to the amount of Rs. 7,688. There was thus a net improvement of Rs. 83,369, and a net surplus of Rs. 3,34,637 which may be regarded as highly satisfactory. The increase in revenue was largely due to a good crop of mhowra and the higher prices realized from the sales of coupes and of royalty trees in waste lands in Khándesh.
- 12. There is little of special interest to note. The year has been marked by steady progress in most directions. The Divisional Forest Officers have worked well and the same applies to the other grades of the service except that of Rangers which seems to include a large proportion of failures. The relations between the Revenue and Forest officers have been altogether satisfactory. In the matter of famine fodder supply the Revenue Department has the strongest reasons for gratitude for the unfailing assistance of the Conservator and his officers, which has relieved Collectors of what is in the present day their chief anxiety in connection with famine administration.

Remarks on the Quinquennial Summary.

- 1. The most noteworthy event of the period was the appointment by Government Resolution No. 8952, dated 15th September 1909, of a committee to investigate and report on certain points in connection with forest administration, with the object of reducing the restrictions on, and increasing the privileges of, the people in respect of forest produce and other cognate matters. One result was the transfer of very large tracts of forest land to the management of the Revenue Department. These lands were of little use for forest purposes and their transfer to the Revenue Department with the object of throwing them open for cultivation and cattle grazing has met the legitimate claims of the villagers and effected a substantial reduction in the number of forest offences. The Sholápur-Ahmednagar Forest Division ceased to exist as a result of the transfer and the forests in the Akola Táluka of Ahmednagar were included in the Násik District, which for forest purposes was divided into two Forest Divisions. Areas under forest proper have in consequence become more compact and the administration more intensive. Out of a total area of 6,281 square miles of notified forests, 1,860 square miles or nearly 30 per cent. are now in charge of the Revenue Department and open to the people for grazing.
- 2. During the period only 114 square miles were brought under working plans, the total area now being 2,540 square miles. Four hundred and seventy

square miles still remain to be dealt with and it is desirable that an Imperial Forest Officer should be kept in charge of this work.

- 3. The expenditure on roads and buildings during the quinqennium increased from Rs. 14,329 to Rs. 51,759. This is eminently productive expenditure and the increase is therefore satisfactory.
- 4. The change of system effected by assigning the work of collecting grazing fees to forest officers instead of the village officers has resulted in better and more regular receipts. At the same time impoundings have decreased by more than 50 per cent., 79,510 cattle having been impounded in 1913-14 against an average of 1,62,864 in the preceding quinquennium.
- 5. The Department rendered signal service to the agriculturists of various parts of the Presidency during the last three years by supplying grass in enormous quantities to tracts affected with scarcity of fodder. In 1911-12 no less than 225 lacs of lbs. of grass were sent to the affected districts of Gujarát alone in addition to large supplies made to parts of Ahmednagar, Sholápur, Poona, Khándesh and Násik. In spite of many difficulties, notably the failure of the monopoly contractor to supply the stipulated quantity and scarcity of labour, the Department carried out the work successfully and usefully employed its resources for the preservation of cattle. Similarly in 1912-13 and 1913-14, the requirements of the affected districts in the Deccan were promptly and satisfactorily met. The following figures show the quantities supplied and the receipts and expenditure during the three years:—

	Qua	ntity in lakbs of lbs.	Receipts.	Expenditure.
			Rs_ullet	Rs.
1 91 1- 12	***	225 *	1,23,056	1,68,004
1912-13	•••	89•8	2,46,335	1,09,682
1913-14	***	87:3	58,046	7 3, 3 70

The beneficial effect of these large supplies was not confined to the animals actually fed but in keeping down the price of fodder may be said to have extended to every head of cattle in the affected area.

6. Financial results are most satisfactory. The Forest Officers are to be congratulated on having nearly trebled the surplus during the period. In short the period has been one of steady progress and improvement both in Forest administration and in the relations of the Department with the people. Its relations with the Revenue Officers have been most satisfactory.

E. MACONOCHIE,
Acting Commissioner, C. D.

REMARKS OF THE COMMISSIONER, SOUTHERN DIVISION, ON THE FOREST ADMINISTRATION REPORT OF THE SOUTHERN CIRCLE FOR THE YEAR 1913-14.

No. S.R.-506 of 1914.

REVENUE DEPARTMENT: Belgaum, 3rd November 1914.

1. The outstanding feature of the forest administration of the Southern Circle is the great improvement in revenue of the last two years. The following figures are remarkable:—

Revenue Expenditure	Ave	erage of 5 years up to 1912-13. Lakhs. 15.5	1913-14. Lakhs. 20-2
A B	•••	5•9 3•3	7·3 3·6
Total	444	9.2	10.9
Surplus	•••	6.3	9.3

Supplied to Gujarát alone; exact figures showing the supplies made to the Deccan Districts are not available.

- 2. This improvement is ascribed by the Conservator to:
 - (1) the rise in price of teak;
 - (2) a growing demand for formerly unsaleable jungle woods;
 - (3) the increase in the intensity of the working of the forests.

The annual statistics point, however, to the paramount importance of the third cause assigned.

From 1908—1911 timber disposed of departmentally varied from 6.6 lakhs of cubic feet to 7.5 lakhs, and fetched from Rs. 7 lakhs to Rs. 7.7 lakhs; or something over one rupee per cubic foot.

In 1913-14 the outturn was over 12 lakhs of cubic feet and the receipts Rs. 11½ lakhs, or less than one rupee per cubic foot.

The cost of extraction appears to have remained constant at about one rupee per three cubic feet, and the Department does not seem to have benefited by the increase of price.

On the other hand timber sold to purchasers has been more profitable:

In 1908-09 6.5 lákhs cubic feet sold for Rs. 1.70 lákhs, in 1913-14 8.5 ,, for Rs. 2.61 lákhs, an increase of 15 per cent. in price.

The production of fuel in these years also increased 50 per cent. from 64 lakhs cubic feet to 95 lakhs, but the revenue rose only from Rs. 2.7 lakhs to 3.4 or 25 per cent. The increase of revenue has therefore been primarily due to increase of out-put.

3. The Conservator is able to record a satisfactory advance in "Communications and Buildings," and is clearly justified in laying stress on the need of a liberal policy in this respect.

The Commissioner ventures to quote an extract from paragraphs 8 and 9 of his letter No. 3758, dated 13th October 1914, in support of this view:

- "Want of communications is naturally the greatest obstacle to exploitation, and the expenditure thereon is exceedingly meagre. In the five years, 1908-1913, expenditure on new roads and paths was Rs. 38,000 in all and on repairs to roads and paths was Rs. 90,000. It is owing to want of communications that contractors are also difficult to get (vide paragraph 9), and that the expenditure on removing produce from one Division is so enormously in excess of the expenditure in a Division more favourably situated. Let us compare Kánara Northern Division and Kánara Eastern Division. In Form No. 24 on page 154 of the Report for 1912-13, we find that the Northern Division removed timber by Government agency to the amount of Rs. 6,49,000 at a cost of Rs. 1,64,000 or 4 annas in the rupee. Kánara Eastern Division removed timber to the extent of Rs. 2,86,000 at a cost of Rs. 1,34,000 or 8 annas in the rupee. The produce was similar in character, the only difference between the two divisions being that the Northern Division is accessible from the railway and the Eastern Division is not. Again, timber was sold in coupes in the Northern Division to the extent of Rs. 1,06,000 and in the Eastern Division to the extent of Rs. 8,000. If the Eastern Division could be opened up by a railway, e.g., from Hubli vid Kalghatgi to Mundgod and Sirsi, and perhaps with a branch to Yellápur, the value of the forests of Kanara would be immensely increased."
- "9. I understand that this project, which has naturally been frequently considered by Forest Officers, has never been investigated by Government. It may be financially impracticable, but I venture to suggest that it is, at any rate, deserving of investigation; and further, that for every division, a definite programme should be drawn up for the construction of major and minor forest roads. * * * * *
- 4. Progress with working plans has been slow; an average of 42 square miles per annum in place of 130 square miles in the previous quinquennium. The cause has not been explained.

Forest Offences.

- 5. The Conservator records an increase from 18,000 to 24,000. The details are not supplied, but there are several indications that the increase does not represent friction with the people.
 - (1) The impoundings of cattle which rose from 13,000 in 1909-10 to 19,000 in 1912-13 have again fallen below 13,000.
 - (2) Over 90 per cent. of the impoundings take place in closed forest, and the area of closed forest has not increased. The harassment of the people in regard to grazing licenses in open forest is not responsible therefore for a large proportion.
 - (3) Nearly one-half of the impoundings occurred in the Belgaum District, where supervision is reported to have been lax in recent years, and the application of some rigour was temporarily necessary.
 - (4) The number of cattle grazing in forest has risen from 360,000 to 420,000, and on this number the percentage of 3 in grazing offences is not excessive.
- 6. The improvement of fire protection is a gratifying feature of the quinquennium; set-backs take place from time to time, but it is clear that the extension of the system of communal rewards and punishments is attended with highly beneficial results on the attitude of the people.
- 7. The reorganisation introduced in 1910-11 raised the cost of the establishment from Rs. 3 lakhs to Rs. 3.7 lakhs; and the conditions of forest service have been further improved by expenditure on housing accommodation and water-supply and the grant of allowances for bad climate.

But the record of punishment shows that other reforms are necessary before the work of the subordinate staff can be regarded as satisfactory. A percentage of punishment of 41.5 is an indication that it should not be neglected.

The duties are arduous and uncongenial specially to the clerical classes; distaste for the physical labour of forest inspection, combined with the reasonable hope that work omitted in the recesses of forest will escape detection tend to create a low standard of morals, which can only be counteracted by unremitting supervision by superior officers in due gradation of rank.

This supervision has not yet been fully provided. The Commissioner has placed his views on this point before Government in this office No. 3758, dated 13th October 1914, and further comment would be out of place in an administrative review. It may be added, however, that punishments by fine have been imposed with undesirable frequency and are inappropriate in the case of men entrusted with the large responsibilities of a range.

8. In spite of the grave difficulties of their task the superior officers of the department under the experienced guidance of Mr. Bell have administered the department with pronounced success. Relations with the people are undoubtedly improving; year by year there is more comprehension of the problems on either side, and a corresponding growth of sympathy and co-operation; while relations between Forest and Revenue officers have been most satisfactory.

H. S. LAWRENCE, Acting Commissioner, S. D. REMARKS OF THE COMMISSIONER IN SIND ON THE FOREST ADMINISTRATION REPORT OF THE SIND CIRCLE FOR THE YEAR 1913-14.

No. 3812 of 1914.

REVENUE DEPARTMENT:

Office of the Commissioner in Sind, Government House, Karáchi, 5th November 1914.

Submitted to Government.

- 2. Considerable progress was made in settlement work, 35,392 acres having been dealt with out of 38,685 acres which were due for settlement. Over 1\frac{1}{4} lakes of acres remain to be divided into squares, the forest growth on the land being as yet undeveloped.
- 3. Cases of illicit grazing have in this report been included in "Forest offences" in compliance with the orders of Government. Taking into account the illicit grazing cases in both years there was an increase of 445 forest offences which is explained as being mainly due to more careful registration in Hyderabad and Sukkur. Fire cases were nearly doubled; offences of unauthorized fellings increased by 203 and cases of illicit grazing by 142. Out of 154 cases taken into court, 108 resulted in conviction, 19 in acquittal and 27 remained pending at the close of the year. Considering the difficulty of obtaining convictions in fire cases, the punishment awarded (viz. a fine of Rs. 15) in the Jerruck division case in which a conviction was obtained was prima facie inadequate. Cases compounded under section 67 of the Forest Act show an increase of 173, the increase in the amount of compensation being Rs. 845.
- 4. The year was particularly bad from the point of view of forest fires, the number being almost double that of the previous year and the area burnt increasing from 3,720 to 10,119 acres. Nearly a half of these fires occurred in the Jerruck division, most of them being malicious. The reason assigned is the heavy rainfall of August 1913 which resulted in the growth of dense coarse grasses which were set fire to by cattle owners in order to grow fresh grass for their cattle.
- 5. The number of cattle impounded rose from 14,472 to 15,761. The entire increase occurs in the Sukkur division and is said to have resulted in the better protection of the closed areas.
- 6. For the reasons reported last year the further attempts made in the Hyderabad and Jerruck divisions to extend the lac bearing area were again unsuccessful.
- 7. The area exploited during the year under report increased by 4,202 acres, but the value realized decreased by Rs. 3,174. This is attributed to want of competition and the glutting of the Sukkur market by Khairpur produce.
- 8. The total forest receipts fell from Rs. 4,55,699 to Rs. 4,14,151. The decrease it noticeable in all the divisions except Jerruck. The decrease in the Larkana division was small and has been attributed to no burnt area being sold during the year. The main causes for the decrease in the remaining two divisions were the low prices realized by the sales of coupes in the Sukkur division, and the smaller area of erosion strips sold, the absence of saleable burnt area and the low prices obtained for the babul pod contracts in the Hyderabad division. The increase of Rs. 5,675 in the amount of expenditure under "Conservancy and Works" and that of Rs. 3,924 under "Establishment" have been satisfactorily explained in the report. The surplus revenue decreased by Rs. 51,147.

- 9. The arrangement made for the supply of fuel by the Forest Department to the Quetta Garrison has been discontinued as the Military Department has now been able to arrange for the direct supply of fuel to the troops through contractors.
- 10. With regard to the information furnished by the Deputy Conservator in accordance with the orders contained in paragraph 2 of Government Resolution No. 2823, dated 20th March 1912, the Commissioner has no special remarks to offer. Mr. Thomson has given a statistical account of the results of the working of the Department during two periods of five years each but has not dealt with the question of forest policy. The more important questions relating to forest administration in Sind were carefully considered and discussed by a Conference of Forest Officers held at Karáchi in June 1913 and copies of their conclusions together with the Commissioner's order thereon have already been submitted to Government.
- 11. Mr. Barrow has of course no personal knowledge of the working of the circle during the year under report, but gathers from the report itself that the circle has been efficiently administered by Messrs. Oliver and Thomson.

R. P. BARROW, Commissioner in Sind.
